

## 22/01488/OUT - OS Parcel 5616 South West Of Huscote Farm And East Of Daventry Road Banbury

I write on behalf of the Banbury Civic Society.

We wish to object in the strongest possible terms to the development of this site for the construction of up to 140,000 sq m of employment floorspace (use class B8 with ancillary offices and facilities), including earthworks to create development platforms and demolition of the existing farmhouse.

The use of this site for employment purposes was considered in detail during the Public Inquiry for the current (2031) Cherwell Local Plan (**Policy Banbury 15**). Whilst the Inspector agreed to the allocation of a much reduced 13 Ha area between the A361 (Daventry Road) and the M40 (today's reduced Ban 15 site, or 'Frontier Park'), he firmly rejected any idea of development to the remaining 36 Ha proposed to the east of the Daventry Road (A361) (the proposals site in this instance).

The Inspector was unequivocal in his refusal to allocate this larger part of the original Banbury 15 site (the proposed development site) for the following reasons:

- 201. Development of the land east of the A361, as noted in earlier landscape assessment work for the Council (2013), would have a significantly detrimental impact on the local landscape, intruding as it would into presently open countryside currently in agricultural use with inevitably large industrial and warehouse buildings. In particular, it would materially extend the built up area of Banbury to the east and lead to a significantly harmful erosion of its rural setting on this side of the town.
- 202. Given the recent approval for DIRFT III, relatively close to Banbury at Daventry, which provides major strategic opportunities to meet the local and regional needs for new B8 floorspace and has the great advantage in sustainability terms in comparison with this site of being rail related, the likely requirement for further employment floorspace, including towards the end of the plan period (i.e. 2031), is reduced.

The Inspector continued:

- 202. ... Moreover, there are acknowledged barriers to delivery of the whole Ban 15 site at J11, including that the traffic movements likely to be generated would trigger the need for the new South East relief road through the town.
- 203. In addition, for the whole site to be developed as a mainly road based B2/B8 employment scheme, major contributions are likely to be necessary to other Cherwell District Council Local Plan transport and highway improvements, especially to the motorway junction itself. There is no clear evidence that an acceptable programme of works could viably and practically be delivered, taking into account the impacts of other developments committed in the plan.
- 206. In the light of the above, only the land west of the A361 (today's Frontier Park) should be allocated for new employment development in the modified plan and none of that to the east of the road, even as a strategic reserve site. This would have the considerable benefit of reducing the very harmful landscape and potential environmental effects of the wider scheme on a main entrance to the town from the north, south east and east, as well as that on the largely rural landscape of the locality.
- 207. Bearing in mind that logistics operators seeking large sites in this area have the alternative of a major rail connected facility at DIRFT nearby, that has good road links to the M1, there is insufficient justification in the evidence for the allocation of the whole 49 ha of this site at present.

We thus object because the development of this site for 'big shed' uses:

- 1) Because it will result in a "significantly detrimental visual impact... (at) a main entrance to the town from the north, south east and east, as well as... on the largely rural landscape of the locality." and
- 2) Because the transport requirements will make such a development unviable: The traffic generated "would trigger the need for the new South East relief road" as well as improvements to

Junction 10, for which “There is no clear evidence that an acceptable programme of works could viably and practically be delivered”.

In addition to objecting most strongly to the principle of ‘big shed’ development on this site, we also have a number of concerns about the supporting documents that underpin the application, notably the Cultural Heritage and Landscape & Visual chapters of the Environmental Statement.

### Landscape & Visual Impact Assessment

We have no idea what discussions were had at the scoping stage for the ES, but we find it remarkable that an LVIA has been produced that fails to take account of 1) *Guidelines for Landscape and Visual Impact Assessment: Third Edition* (Landscape Institute and Institute of Environmental management and Assessment, May 2013) and 2) *Landscape Institute Technical Guidance 02/21 Assessing landscape value outside national designations* (published May 2021).

1. Study Area: To comply with Landscape Institute guidance the study area is woefully insufficient. For buildings up to 23 m high the study area should be 10 km (minimum) from the boundary of the proposals site. In the LVIA chapter the study area is 3km from a point at the centre of this extensive site. Whilst considerably less than the 10km study area advised as necessary in Landscape Institute guidance, it nevertheless shows that the development will be plainly visible from the historic settlements of Overthorpe and Chacombe, from Banbury Crematorium (a location of High visual sensitivity) and widely across swathes of the historic ridge-and-furrow farmlands within the Clay Vales and Upstanding Village Farmlands landscape character areas (Oxfordshire Wildlife and Landscape Study (OWLS)).

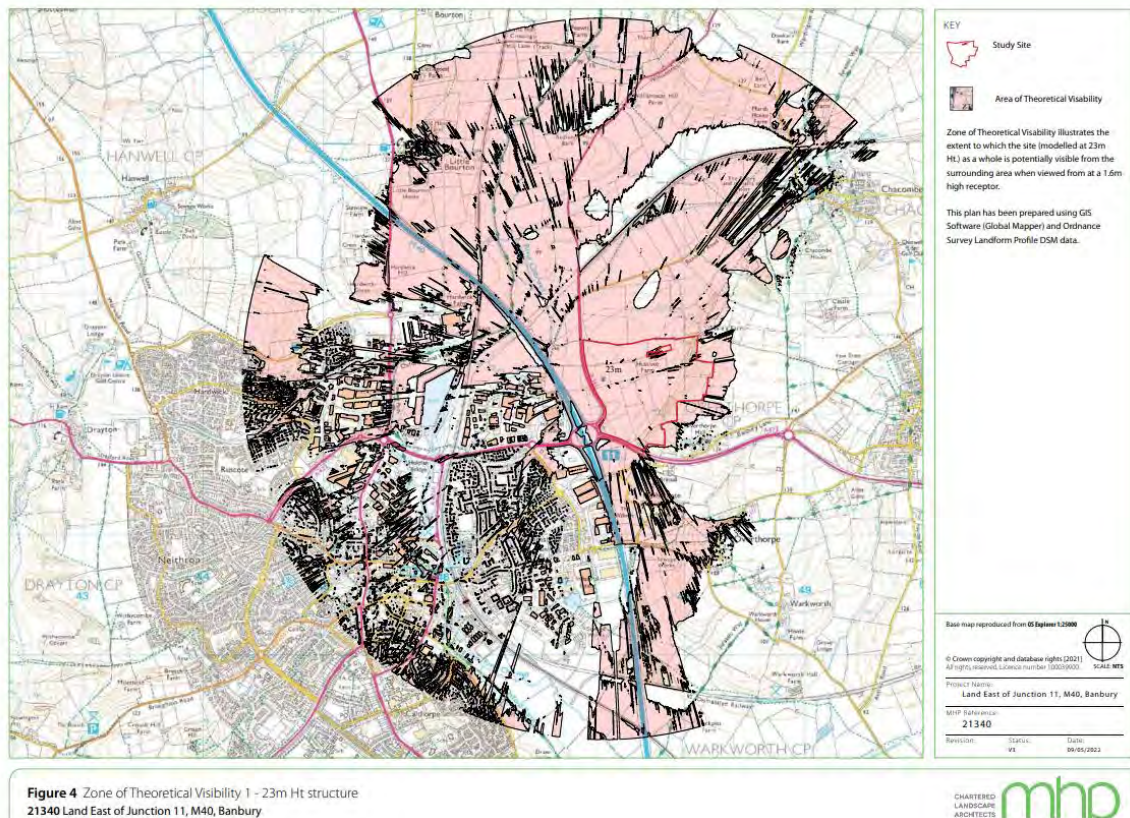

Figure 4 of the LVIA, showing 3km study area for the Zone of Theoretical Visibility, excluding for example, much of Banbury. Whilst considerably less than the 10km study area advised as necessary in Landscape Institute guidance, it nevertheless shows that the development will be plainly visible from the historic settlements of Overthorpe and Chacombe, from Banbury Crematorium (a location of High visual sensitivity) and widely across swathes of the historic ridge-

and-furrow farmlands within the Clay Vales and Upstanding Village Farmlands landscape character areas (Oxfordshire Wildlife and Landscape Study (OWLS)).

2. Zones of Theoretical Visibility (ZTV): *Appendix 5.2 Landscape and Visual [Impact Assessment] Methodology*, submitted as part of the ES, states, at paragraph 1.20, that the ZTVs are bare-earth only and therefore a 'worst case'. This is not a correct statement. As Figures 5.1 to 5.4 (aka Figs 1 to 4) illustrate, vertical elements have been factored in to the ZTV.
3. Fieldwork methodology: Were the best locations of viewpoints chosen and how were these chosen? Some of the photographs (notably location AV1 taken from behind a hedge) would suggest that some of the locations may not have been the best or most useful. Also many of the photographs have been taken from roads (generally Medium/Low sensitivity receptors) rather than focussing on locations where High sensitivity receptors would experience an effect of the change in views, e.g. footpaths and residential receptors. This gives an under-representation of those people with the potential to experience significant effects, which an LVIA should be focussing on, as set out in the *Guidelines for Landscape and Visual Impact Assessment: Third Edition* (Landscape Institute and Institute of Environmental management and Assessment, May 2013) (GLVIA) paragraph 1.17).
4. Photomontages: Despite this being a major application for very large buildings on a highly visible, elevated site, no visualisations are provided showing the visual impact of the proposed development on the wider landscape. *Landscape Institute Technical Guidance Note 06/19 Visual Representation of Development Proposals* (published September 2019) (TGN 06/19) requires that "...most applications accompanied by a LVIA (as part of a formal EIA), some non-EIA (LVA) development which is contrary to policy or likely to be contentious" require a Type 2 to 4 visualisation (as set out in paragraph 3.5.2 of TGN 06/19, Table 1, TGN page 9 and Table 2, TGN page 11). Examples are given in section 3.7 of development types and appropriate visualisation types. Falling somewhere between (4) a large housing site and (6) a large energy from waste plant, in scale, the appropriate visualisation type would be Type 3 or Type 4, i.e. a photomontage/photowireline or a verifiable photomontage/photowireline. The basic annotated photographs submitted in the LVIA are Type 1 visualisations (as stated in the submitted *Appendix 5.2 Landscape and Visual [Impact Assessment] Methodology*, paragraph 1.7) and not sufficient to illustrate the scheme. The authors of the LVIA, as well as Cherwell's planners and the wider public are thus unable to view any meaningful representations of the impact of the proposed development on the wider countryside. To comply with Landscape Institute guidance for LVIA, photomontages for both the parameter plan and for the illustrative layout should have been produced.
5. Value of the Landscape: As set out in the *European Landscape Convention* (Council of Europe, 2000, ratified 2006) (ELC) requires that account should be taken of all landscapes, designated or not. Box 5.1 of the GLVIA sets out a range of factors that can help in the identification of valued landscapes. *Landscape Institute Technical Guidance 02/21 Assessing landscape value outside national designations* (published May 2021) (TGN 02/21) builds on the factors set out in the GLVIA guidance. TGN 02/21, Table 1 sets out factors and requires evidence to identify the level of the value of such landscapes. The LVIA submitted with the application (Land East of Junction 11, M40, Banbury) has not undertaken such an evaluation. *Appendix 5.2 Landscape and Visual [Impact Assessment] Methodology*, submitted as part of the ES gives landscapes with no designated features or landscape, a Low value. This is not the correct approach and under-values the Application Site landscape, ignoring its functionality, resulting in a lower sensitivity of the landscape and consequently a lower significance of effects on the existing landscape character. We note that the 'Medium / High' landscape value of the two landscape character types within the proposal site (Clay Vales and Upstanding Village Farmlands LCAs in the Oxfordshire Wildlife and Landscape Study (OWLS)) is acknowledged in the LVIA, but we would strongly take issue with how the 'Medium / High' sensitivity of these LCAs is reduced in the LVIA first to Medium / Low, and then to Low, simply because of the presence of the M40 (which was there when OWLS was written) and because of Frontier Park, a development that the Inspector determined would **not** have the *very harmful landscape and potential environmental effects... on a main entrance to the town... (and) on the largely rural landscape of the locality* that would arise from the development of the proposals site.

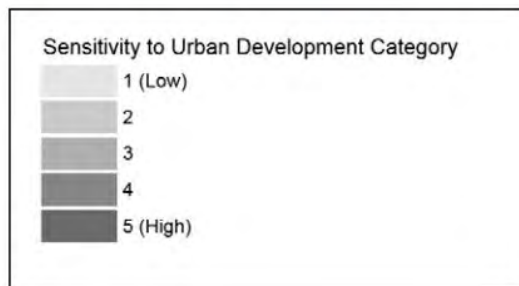

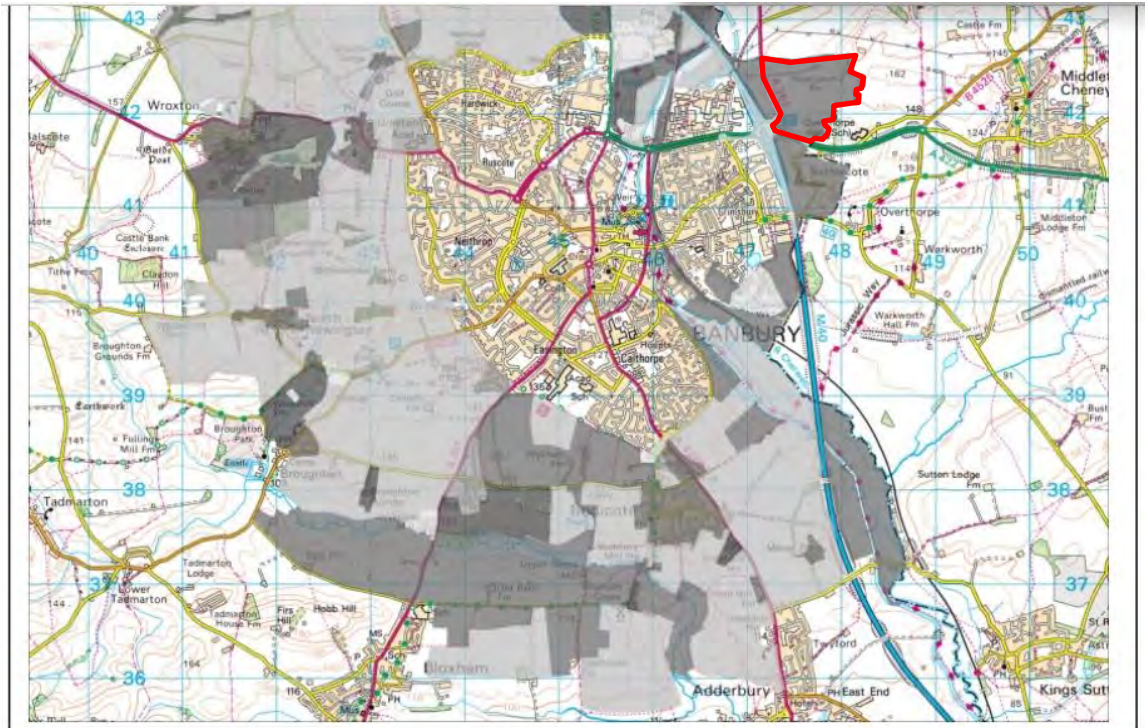

Figure from Oxfordshire Historic Landscape Characterisation Project [Chapter5CaseStudies.pdf](#) ([oxfordshire.gov.uk](http://oxfordshire.gov.uk)), 5.3.4.2 - Capacity for Change: Banbury Study Area, showing the proposals site within an area “Medium / High (4) Sensitivity to Urban Development”. Note: this excludes land in Northamptonshire (on the right of the map) that is of equal sensitivity to urban development.

6. Value of views: As with the value of undesignated landscape, *Appendix 5.2 Landscape and Visual [Impact Assessment] Methodology*, submitted as part of the ES gives local views (defined as any views not mentioned as important at a district level , a Low value. Apart from ignoring the value that might be placed on views identified in Neighbourhood Plans or other local literature. This information would also come out of a proper review of landscape value (TGN 02/21). The approach taken in the methodology has resulted in a lower significance of effects experienced by visual receptors.
7. Significance of Landscape Effects: The tables that report the significance of effects, in Appendix 5.3, does not follow Table 6 of *Appendix 5.2 Landscape and Visual [Impact Assessment] Methodology*, submitted as part of the ES, e.g. “National Character Area (NCA 95) Northamptonshire Uplands (construction effects)” (see corrected version below).

Sensitivity	Medium
Magnitude of Change/Impact	Low
Permanent or Temporary	Permanent
Direct or Indirect	Indirect - This is an incorrect statement the Application Site falls within NCA 95, it is therefore a direct effect
Beneficial/Adverse	Slight adverse – This is incorrect terminology. Using Table 6 of Appendix 5.2 this should be Minor to Moderate adverse
Residual Effect	Slight adverse – Incorrect terminology, as above

There are many examples of these anomalies, e.g Site features (construction effects) has a High Sensitivity and a Medium magnitude of change would result in a Major adverse (i.e. significant). The statement at paragraph 9.1.3 (at Appendix 5.3) is therefore incorrect.

8. Significance of night time effects: There is no night time assessment, either for landscape character or views. A development of this type will be lit at night, so an assessment should have been done.
9. Cumulative Impact Assessment (CIA): Appendix 5.3, Section 8 Cumulative and In-combination Effects, paragraph 8.1.4, states that *“the development of the site would not give rise to cumulative effects on shared receptors of similar development”*. This is clearly not correct. There would be cumulative effects, they may not be significant but there would be some. Section 8 does not list the projects considered, not does it provide a plan showing the cumulative projects considered in the CIA. There are many types of cumulative effects as set out in GLVIA Chapter 7 Assessing Cumulative landscape and visual Effects (pages 120 to 134) there are seven listed in the chapter. This section of the ES chapter does not follow GLVIA guidance and as a result gives an incorrect account of the potential CIA effects on both landscape and visual resources and receptors.
10. The assessment has taken into account development that has not yet been completed to justify down grading the value of landscape character and views. This is not a correct approach. Projects under construction, or with planning permission, but not yet implemented are Tier 1 cumulative projects, not part of the existing baseline. The photomontages, whilst not showing the proposed development, crudely photoshop in a building between the M40 and A361 is not yet complete. Again this is an incorrect approach if you are not similarly showing the proposed development on the Application Site.

The above are fundamental issues that appear to be designed to downplay or conceal the visual impact of the proposed development and which would result in any consent based upon the LVIA being open to potential legal challenge.

## **Cultural Heritage**

Our objections are similar to the above for Cultural Heritage.

Firstly, and most crucially, we would strongly dispute the attribution of a ‘Low’ heritage value for the extensive and well-preserved medieval ridge-and-furrow fieldscape that characterises both the proposal site itself (formerly belonging to the Huscote deserted medieval village) and the adjoining fields within both Oxfordshire (Nethercote deserted medieval village) and Northamptonshire (Warkworth deserted medieval village, Chacombe and Overthorpe). This Low value derives from the matrix approach to assessment chosen by the author, whereby any non-designated heritage asset is automatically ascribed a Low value, irrespective of its heritage significance. This approach is contrary to the NPPF, which at paragraph 203 recognises that the ‘significance’ of non-designated assets can vary greatly: *“The effect of an application on the significance of a non-designated heritage asset should be taken into account in determining the application. In weighing applications that directly or indirectly affect non-designated heritage assets, a balanced judgement will be required having regard to the scale of any harm or loss and the significance of the heritage asset.”*

Whilst the Huscote DMV and ridge-and-furrow (the proposals site) and the Nethercote DMV and ridge-and-furrow are not recorded or assessed within the Oxfordshire Historic Environment Record (OHER), it needs to be noted that the contiguous ridge-and-furrow of Warkworth, Overthorpe and Chacombe townships are inscribed on the Northamptonshire HER (NHER) (see map below). The difference is simply a matter of modern administrative boundaries: whilst all of these townships (together with Grimsbury) were historically in Northamptonshire (subject to modern, county-wide survey “Midland Open Fields Project, 1995-99”), the former townships of Grimsbury, Nethercote and Huscote are now in modern Oxfordshire, a county notable for lagging nationally in Historic Landscape Characterisation, particularly with regard to the sort of fine-grain, time-depth, county-wide historic landscape studies found in Northamptonshire, notably *Hall D.; Palmer R.. 2001. Midland Open Fields Project: Digital Archive* and the *Northamptonshire Terrestrial Minerals Resource Assessment (TMRA), 2012-14.*

Whilst Hall and Palmer merely identified and mapped the extents of the of surviving ridge-and-furrow of Warkworth (NHER 9 - MNN209), Overthorpe (NHER 18 - MNN217) and Chacombe townships (NHER 9052/0), the last-named, which directly abuts the northern edge of the proposals site has been assessed in much greater detail, thanks in part to the Northamptonshire Terrestrial Minerals Resource Assessment (TMRA), 2012-14). It has been subject to further assessment as it is a SHINE (Selected Heritage Inventory for Natural England) candidate site. As a result of these assessments, the NHER contains the following significance ratings for the part of the Chacombe fieldscape immediately abutting the site (NHER 9052/0/2 - MNN132348):

#### Other Statutes and Cross-References

SHINE <b>Candidate</b> (Possible)	Active
Sites & Monuments Record - 9052/0/2	Active

#### Ratings and Scorings

Current Assets Rating	Yes	06/07/2005	
Form of Survival	Upstanding	06/07/2005	Midland Open Fields Project, 1995-99 - 7968005
TMRA Asset Significance	High	09/10/2013	Northamptonshire Terrestrial Minerals Resource Assessment (TMRA), 2012-14
TMRA Evidence Value	Medium	09/10/2013	Northamptonshire Terrestrial Minerals Resource Assessment (TMRA), 2012-14
TMRA Aesthetic Value	High	09/10/2013	Northamptonshire Terrestrial Minerals Resource Assessment (TMRA), 2012-14
TMRA Historical Value	High	09/10/2013	Northamptonshire Terrestrial Minerals Resource Assessment (TMRA), 2012-14
TMRA Community Value	Unknown	09/10/2013	Northamptonshire Terrestrial Minerals Resource Assessment (TMRA), 2012-14
TMRA Survival Value	Extant	09/10/2013	Northamptonshire Terrestrial Minerals Resource Assessment (TMRA), 2012-14

From the above it is evident that the ridge-and-furrow of Chacombe township abutting the northern boundary of the proposals site is of High aesthetic value, High historical value, Medium evidential value. It is likely that residents of Chacombe would argue that it is of at least Medium communal value. As it scores a High overall TMRA (Terrestrial Minerals Resource Assessment) value and is a candidate SHINE site (meaning its preservation and interest is such that the use of public money for a stewardship scheme is justified), it would be argued that, whilst technically a non-designated heritage asset, the Chacombe medieval fieldscape would be of at least regional, and potentially national, importance (Medium or High importance and High sensitivity).

It is of course a further step to then imply that the similarly well-preserved ridge-and-furrow fieldscapes of the former Huscote, Nethercote and Overthorpe townships are of equal value (as they haven't been assessed in the same detail), but the above does show that the assertion in the Heritage chapter that these fieldscapes (including that of Chacombe) are only of Low value simply because they are non-designated (i.e. not Listed buildings, Scheduled Monuments or Registered Battlefields) would appear to be a perverse application of an unduly simplistic matrix-based approach.

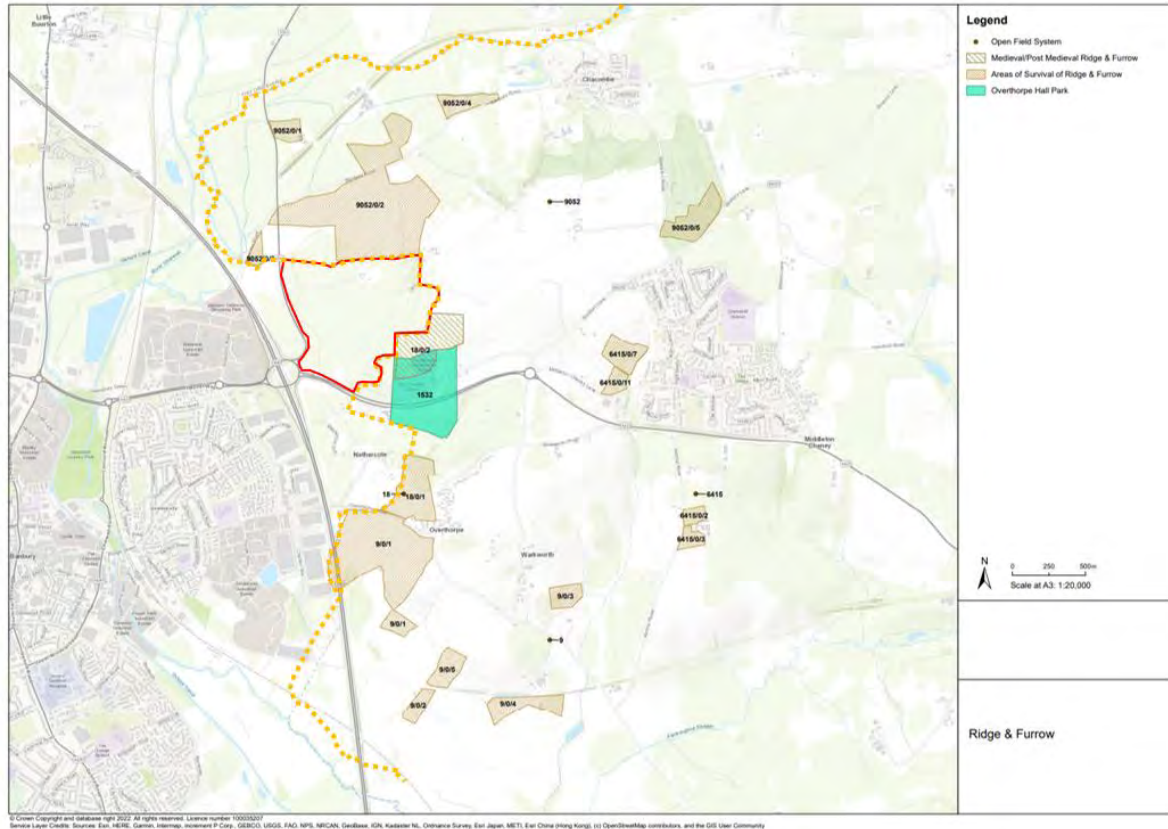

Nevertheless, it is clear that the proposed development will effectively remove altogether the ridge-and-furrow fieldscape and DMV of Huscote township. The loss of this ridge-and-furrow, together with the proposed development itself, will also, of course, have their own impacts on the setting of the Chacombe fieldscape (and parts of Chacombe), the Nethercote fieldscape and DMV (including the Grade II Home Farm (former manor house)) and the Overthorpe fieldscape (and large parts of Overthorpe village).

Using the Significance of Effect matrix in the Heritage chapter of the ES, the complete loss of the Huscote township fieldscape and DMV would be a High impact on an asset of at least Low value, resulting in an effect of Moderate significance (a significant effect). If the Huscote fieldscape is assessed as being of Medium value (i.e. comparable with Chacombe), the significance of effect rises to Major (effectively a show-stopper).

We would dispute the assertion in the ES that the impact is instead Low, which is only achieved by calling the asset "*the surviving ridge and furrow earthworks across the locality more widely*", so that it can be

argued that the proposed development will only physically impact a small part of the combined medieval field systems of Huscote, Nethercote, Overthorpe, Warkworth and Middleton Cheney. This aggregation to produce a non-significant effect is the same arguing a non-significant effect from the demolition of a Listed building by arguing that the asset is not the Listed building at all, but instead *‘the Listed buildings in the locality more widely’*.

NHER plot with the Oxon - Northants county boundary overlain, showing (in brown) the ridge-and-furrow fieldscapes of Middleton Cheney, Warkworth, and Overthorpe. Overthorpe Hall Parkland shown in green.

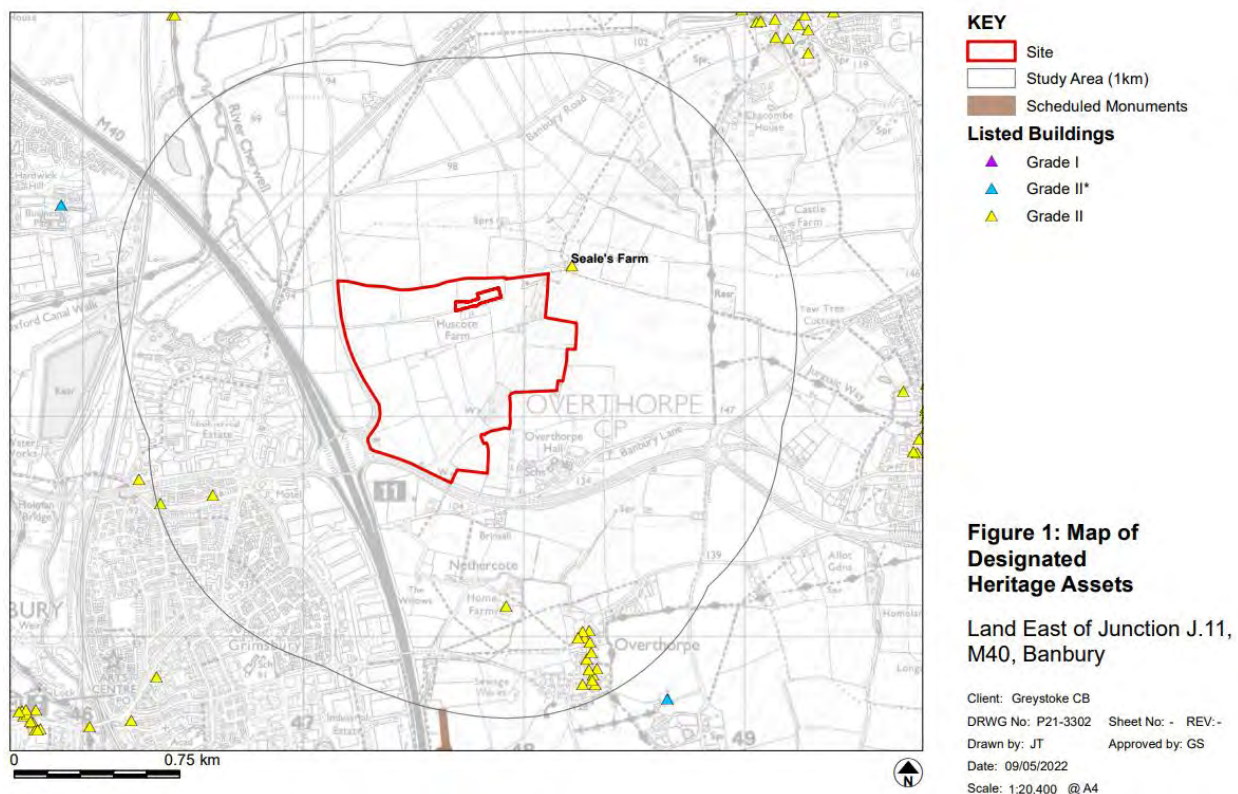

Lidar image from the Heritage chapter of the ES, showing the Huscote fieldscape within the red-line boundary, with the Chacombe fieldscape to the north (NHER 9052/0/2), part of the Overthorpe landscape (NHER 18/0/2) to the east, and part of the Nethercote fieldscape (in Oxfordshire) to the south. It will be seen that in terms of preservation and interest, there is not a lot to separate these individual assets,

although it is conceded that there has been a little more erosion on some of the more elevated parts of Huscote field system (the proposals site).

As well as taking issue with the assessments of the importance of these landscapes and the resultant effect of the complete loss of the fieldscape and DMV of the Huscote township, we would also take issue with assessment of impacts upon the *setting* of multiple heritage assets.

Despite the extensive (but non-compliant) 3km ZTV boundary identified in the LVIA (see above), the Heritage chapter adopts a study area of only 1km from the boundary of the proposals site (Figure 1 of the Heritage chapter, below). Despite this limitation, the study area includes the Grade II Home Farm, Nethercote, the Grade II Seale's Farmhouse and 13 Grade II Listed buildings in Overthorpe. Because of the limited radius, the study area misses some 30 Grade II Listed buildings in Chacombe, including the Grade II\* Chacombe Priory and Grade I church.

The 1km study area includes parts of the Overthorpe Conservation Area and the Oxford Canal Conservation Area. Unconventionally, neither is acknowledged in the Heritage chapter, so the impacts and effects of the proposed development on either are not assessed. Because Chacombe Conservation area and its listed buildings lie just outside of the 1km study area, any impacts and effects on these are also not assessed.

In terms of setting and views, we would note that the Chacombe Conservation Area Appraisal states that *"This varied landscape character is evident particularly to the south and west of the village with expansive views over to the Cherwell Valley"*. Similarly the Overthorpe Conservation Area Appraisal notes *"The views emphasise the agricultural nature of the village, surrounded by open fields. These views have been altered in more recent years, with the growth of Banbury and the construction of the M40 motorway. The rural nature of these views is still maintained however, with views of the rolling countryside visible."* The Oxford Canal Conservation Area is linear and of varied character, but it becomes increasingly rural and tranquil as it passes the Site.

Given the importance of the rural setting to the significance of these conservation area (and indeed given all established EIA guidance), we do find it astonishing that the only off-site receptors that are considered at all in the Heritage chapter are the Grade II Seale's Farmhouse and the non-designated Overthorpe Hall Pak (the present Cardus School), both of which adjoin the proposals site.

Again, most particularly because of the scale of proposed development and its prominent valley-side hillside location, the omission of any consideration of impacts and effects on the setting and heritage significance beyond 100m of the Site is extraordinary. As this excludes all conservation areas and a number of Listed buildings whose setting will, or may, be affected, the Heritage chapter is non-compliant with professional guidance, any consent based upon the findings of the Heritage chapter would potentially be open to legal challenge.

## Conclusions

We maintain our strong objection to the development proposed, essentially for the same reasons set out so clearly by the Planning Inspectorate in their refusal to allocate this site for 'big shed' use in the current Cherwell Local Plan 2031, viz:

- Development of the land east of the A361, as noted in earlier landscape assessment work for the Council (2013), would have a significantly detrimental impact on the local landscape, intruding as it would into presently open countryside currently in agricultural use with inevitably large industrial and warehouse buildings. In particular, it would materially extend the built up area of Banbury to the east and lead to a significantly harmful erosion of its rural setting on this side of the town.
- 202. Given the recent approval for DIRFT III, relatively close to Banbury at Daventry, which provides major strategic opportunities to meet the local and regional needs for new B8 floorspace and has the great advantage in sustainability terms in comparison with this site of being rail related, the likely requirement for further employment floorspace, including towards the end of the plan period (i.e. 2031), is reduced.

It is most unfortunate that the reassurance that the ES might have provided with verified views (visualisations) and robust assessment is fatally undermined by studies that do not meet recognised professional standards (including that of the Landscape Institute, the Institute for Archaeology, IEMA and Historic England).

The failure to provide visualisations, the failure to recognise the potential regional or national importance of the Chacombe medieval fieldscape (and the importance of the contemporary Nethercot, Huscote and Overhorpe landscapes individually, collectively, and in their contribution to the setting of other heritage assets, most notably their respective village conservation areas) are fundamental flaws that make it impossible to gainsay the Inspector's opinions above.

As a result, we object on the grounds that the proposed development is contrary to:

- **Cherwell Local Plan Policy ESD 13 - Local Landscape Protection and Enhancement –**  
“Development will be expected to respect and enhance local landscape character, securing appropriate mitigation where damage to local landscape character cannot be avoided. Proposals will not be permitted if they would:
  - Cause undue visual intrusion into the open countryside
  - Cause undue harm to important natural landscape features and topography
  - Be inconsistent with local character
  - Impact on areas judged to have a high level of tranquillity
  - Harm the setting of settlements, buildings, structures or other landmark features, or
  - Harm the historic value of the landscape.
- **Cherwell Local Plan Policy ESD 15 - The Character of the Built and Historic Environment -**  
Where development is in the vicinity of any of the District's distinctive natural or historic assets, delivering high quality design that complements the asset will be essential.

New development proposals should:

- Be designed to deliver high quality safe, attractive, durable and healthy places to live and work in. Development of all scales should be designed to improve the quality and appearance of an area and the way it functions

- Contribute positively to an area's character and identity by creating or reinforcing local distinctiveness and respecting local topography and landscape features, including skylines, valley floors, significant trees, historic boundaries, landmarks, features or views, in particular ... within the Cherwell Valley and within conservation areas and their settings
  - Conserve, sustain and enhance designated and non designated 'heritage assets' (as defined in the NPPF) including buildings, features, archaeology, conservation areas and their settings, and ensure new development is sensitively sited and integrated in accordance with advice in the NPPF and NPPG. Proposals for development that affect non-designated heritage assets will be considered taking account of the scale of any harm or loss and the significance of the heritage asset as set out in the NPPF and NPPG
  - Include information on heritage assets sufficient to assess the potential impact of the proposal on their significance. Where archaeological potential is identified this should include an appropriate desk based assessment and, where necessary, a field evaluation.
  - Respect the traditional pattern of routes, ... enclosures and the form, scale and massing of buildings.
- **NPPF Paragraph 195 :** "Local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset) taking account of the available evidence and any necessary expertise)"
  - **NPPF Paragraph 199.** "When considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation (and the more important the asset, the greater the weight should be). This is irrespective of whether any potential harm amounts to substantial harm, total loss or less than substantial harm to its significance." And
  - **NPPF Paragraph 203.** "The effect of an application on the significance of a non-designated heritage asset should be taken into account in determining the application. In weighing applications that directly or indirectly affect non-designated heritage assets, a balanced judgement will be required having regard to the scale of any harm or loss and the significance of the heritage asset."

Should the Council determine that the obvious harm on landscape and heritage is balanced by the claimed public benefits of the proposed development, we would insist that these public benefits include the funding of improvements to Jct 11 of the M40 and the Wildmere Road roundabout, as well as the full funding of the South East Link Road, which the Inspector considered would be the minimum need just to mitigate for the additional lorry movements generated.

Yours sincerely

Rob Kinchin-Smith

## Summary

English Heritage's Monuments Protection Programme (MPP) previously commissioned work on the remains of open fields (principally ridge and furrow) in Northamptonshire to study parameters suitable for field classification and to provide a new Monument Class Description for open fields in the central and eastern Midlands. Following on from this, the whole of the (south) Midlands east of Birmingham had its ridge and furrow mapped and assessed within the context of each township, the extent of survival, and the quality of historical documentation. A Gazetteer lists 43 priority sites lying in 40 civil parishes, defined by the criteria of field system (township) completeness, compactness of sample, association with village earthworks, and the quality of the historical documentation. Each example is accompanied by maps, and recommendations are discussed for preservation by scheduling or by other methods, and for the detailed recording of significant examples that may be destroyed. In January 1999, new photography was commissioned for the 43 townships to provide an up to date assessment of their survival.

# 1 Foreword

## *"All cut up and done"*

The gently curving darksome bawks  
 That stript the Cornfields o'er  
 And prov'd the Shepherds daily walks  
 Now prove his walks no more  
 The plough has had them under hand  
 And over turnd 'em all  
 And now along the elting Land  
 Poor swains are forc'd to maul

And where yon furlong meets the lawn  
 To Ploughmen Oh! how sweet  
 When they had their long furrow drawn  
 Its Eddings to their feet  
 To rest 'em while they clan'd their plough  
 And light their Loaded Shoe  
 But ah - there's ne'er an Edding now  
 For neither them nor you

The bawks and Eddings are no more  
 The pastures too are gone  
 The greens the Meadows and the moors  
 Are all cut up and done ....

*The Lamentation of Round-Oak Waters*  
*composed 1818, first published 1935*  
*John Clare*

## The loss of a local landscape legacy

When John Clare (1793-1864) wrote these lines, with their detailed and evocative description of the open field, ridge and furrow, agricultural landscape of his youth, he was commenting from a personal, almost daily, observation of the social effects of enclosure. In particular he lamented the loss to the plough of headlands and the grassed strips of the balks, and worried that all ridge and furrow would vanish. From our vantage point almost two centuries later, we can see that this did not happen, and that much ridge and furrow was not over-ploughed but laid down to pasture, thus surviving to become a characteristic feature of the 20th century English Midland landscape. We now live again, however, towards the end of a renewed period of major rural change, and now the surviving examples of Clare's curving bawks, eddings, furlongs and lawns are disappearing year by year.

*Detail from the Northampton Map of 1632 (Northamptonshire Record Office, Map 4671)*

*“our best surviving ridge and furrow was enclosed before the period of greater destruction which Clare was describing in 1818”*

This process of change is the background to this report by David Hall which has been jointly published by English Heritage and Northamptonshire Heritage on behalf of nine county archaeological services in the English Midlands. It describes a project funded by the Monuments Protection Programme (MPP) of English Heritage and carried out between 1995-98. The project set out to reconstruct the likely original extent of ridge and furrow in its proper context as part of medieval open field systems (within the framework provided by the MPP's national map of settlement diversity) and to discover how much of this still survives despite significant landscape and agricultural change in recent decades. The methodology of the project is fully described in the main body of the report. It used recent air photographic evidence to map the survival of ridge and furrow against the pattern (where it is known) of medieval townships, which were the building blocks of the medieval landscape, and the basic unit of community life and farming activity. Approximately 2,000 townships once existed in the study area. Virtually all will once have possessed large areas of ridge and furrow, in many cases covering 80-90% of their territory, but only 43 today retain it over significant areas. Comparison with maps of the 1950s shows that much of this loss has occurred in recent decades. Comparison with the date of enclosure shows that, in most of these townships, enclosure took place before 1800; in other words, our best surviving ridge and furrow was enclosed before the period of greater destruction which Clare was describing in 1818.

The results of the project confirm quantitatively what has been long suspected anecdotally - that ridge and furrow, which was once a most characteristic and commonplace sight in the East Midlands, is now very rare and becoming rarer year by year, and that where once this relic of medieval open field systems was ubiquitous, with large vistas of ridge and furrow stretching almost as far as the eye can see, it is now becoming steadily more unusual. This loss is principally a result of agricultural and land-use change over the last half-century. This is particularly significant because the area chosen for our study - the East Midlands - has always been regarded as the classic area for ridge and furrow in the whole of England, and has largely defined our view of ridge and furrow as a part of the national archaeological and landscape heritage. If ridge and furrow is rare and threatened in its primary area, then its survival as a significant component of the national heritage must be in some question.

There are, however, still a few places left where the landscape is filled with ridge and furrow at a scale which truly reflects its historical and archaeological importance. This report identifies where these are. In doing so, it firmly underlines the need for greater care in trying to keep and properly maintain the remnants that have survived. Their conservation and management will not be easily achieved however, and will require positive land management as well as legal protection; most importantly, it will require informed and sympathetic action on the part of those landowners who are the stewards of these survivals.

It is not simply a case of ridge and furrow itself being destroyed, however, though much has been ploughed since the 1950s and some townships already have none at all. What still survives has also been fragmented and broken into small pockets. There will sometimes be small corners of ridge and furrow to show to schoolchildren, for example, to explain to them what the open field systems of their core-curriculum history lessons actually meant to medieval people, but already there are very few areas where they could understand how the medieval countryside worked. Such an understanding can only be

*Denchworth, Oxfordshire  
(formerly Berkshire), SU 321 925  
(CUCAP ZknHM 0137, 1999)*

revealed by the interlocking of separate furlongs sometimes separated by hollow ways (roads), the pattern of the two, three or four great fields, the relationship of arable to the precious areas of meadow and woodland, or the connection to settlements: in other words, by the survival of contiguous, related areas. Of the c.2,000 townships identified in the study area of this project, as few as 104 townships were identified in 1998 as having more than 18% of their original ridge and furrow, of which only 43 (in 40 parishes) were selected as outstanding examples.

There has been further loss since then: air photographs of the 43 townships newly taken for English Heritage in 1999 have shown that in one township the survival of ridge and furrow has fallen below 10%, and that only 20 townships (as opposed to 31 when the project was first carried out, using photographs taken between 1988-96) now enjoy more than 23% survival. Furthermore, in 1999, only 6 townships retained more than 40% of their ridge and furrow (as opposed to 9 in c.1996). Of the two townships which still have more than 50%, one has fallen since 1992-4 from 70% to 52%. Putting all this in very simple terms, a once commonplace and extensive archaeological monument type is now highly fragmented, and rapidly disappearing. Large contiguous areas of ridge and furrow which can give a true indication of the open field system survive in only a handful of places, and even these are no longer as extensive as might be imagined. In other words, what was once common and often unregarded is now rare and needs to be valued.

*"... what was once  
common and often  
unregarded is now  
rare and needs to be  
valued."*

## The national importance of the East Midlands open fields

Our project has focused on the East Midlands, which has long been recognised as the classic area, the heartland, of the medieval open field systems of farming. Ridge and furrow has been particularly well-studied in this area, not least in David Hall's own work, both documentary and archaeological, over many years (Hall 1993, 1995). This long tradition of research was a principal reason for locating the MPP project in this area. Equally important in our choice, however, are the national patterns of historic settlement and land-use revealed in a separate English Heritage-supported project, the production by Professor Brian Roberts and Stuart Wrathmell of an Atlas to map settlement diversity (Roberts and Wrathmell 1998, 2000). In bold and clear terms, this Atlas has created a framework for both research and conservation that is firmly founded on significant and long-standing distinctions within the English landscape. The Atlas maps for us a broad swathe of England - the 'Central Province' - in which, since at least 1000AD, the landscape has (and continues to be) characterised by large nucleated settlements and distinctive field systems, in sharp contrast to other parts of England where much older enclosed field systems and dispersed patterns of farmstead and hamlet form the historical character of the landscape. In the Middle Ages, Central Province field systems generally took the form of open fields, farmed collectively by village communities. In the Midlands, open fields took a particular form, and are defined specifically by its use of farming methods that produced ridge and furrow of the classic type.

Official recognition of the archaeological and historic significance of open field systems, and their protection by scheduling or other means, has slightly lagged behind concern for other types of monuments. This is partly because of the perception that their remains were commonplace, but also partly through inadequate understanding and definition. Similar (but subtly different) types of field system involving ridged cultivation exist elsewhere in England, but attempts to define a national policy for preservation have failed in the absence of a rigorous definition of the different types. The Roberts and Wrathmell settlement map has now given us a geographical framework within which to conceptualise and define the monument type more clearly and usefully. The commissioning from David Hall of an MPP Monument Class Description (see Appendix 1) for 'Midland Open Fields' has provided us with both a typological and morphological framework; in particular putting ridge and furrow into its proper context, as the primary physical remains of medieval open fields, indeed as their principal surviving indicator in the landscape. This report now adds to these two frameworks a clear demonstration of the rarity of the monument class.

*"The fragment that  
remains to us in the  
East Midlands ... is a  
reminder of a whole  
world"*

The area chosen for the study covered two of the nationally defined settlement sub-Provinces. Both lay in the Central Province, which has for centuries been characterised by large numbers of nucleated settlements, with only low levels of dispersed settlements, which are mainly restricted to small woodland areas. In most areas, the nucleated settlements originally managed open fields and so were surrounded by extensive patterns of ridge and furrow. Other resources - woodland and meadow - were in the Middle Ages at a premium in this area, and the ridge and furrow constituted up to 90% or even more of the whole landscape. The fragment that remains to us in the East Midlands therefore is a reminder of a whole world, both socially and topographically.

The logic of focusing our project on the East Midlands, supported by the richness of past research and the resultant depth of understanding, has also been confirmed, albeit retrospectively, by a rapid survey whose results are in the report, carried out among all county archaeologists in England, who were asked to estimate the level of survival of ridge and furrow (or more accurately, perhaps, ridged cultivation) in their areas. Ridge and furrow exists elsewhere in England, and some of it is also a relic of open field agriculture. The survey shows a few areas where similar levels of survival to the East Midlands can be expected, but this is either in relatively small pockets (i.e. without the extensive character of the best townships in the East Midlands) or the ridge and furrow is evidence of different types of field system, as for instance on the South-Western Uplands, which therefore need both different approaches to understanding and distinctive definition of significance. On present knowledge, therefore, we are confident that the East Midlands project gives us an insight into the great majority of open field ridge and furrow which is still surviving and still articulated, and that survivals elsewhere in the country are more fragmentary.

The Monuments Protection Programme will address these other areas as part of its ongoing programme of assessment and designation of medieval settlement remains, into which ridge and furrow will fit as part of a settlement's context and group value. Within the East Midlands we will also consider, as part of our work on individual settlements, the scheduling of the mainly smaller areas of ridge and furrow that lie outside the 43 priority townships. There are well-tested and tried precedents for dealing with such areas, ranging from scheduling to management agreements for stewardship; it is simply more straightforward to protect small areas. The problem is much more difficult, however, when as much as 25% to 50% of a township is involved. In the East Midlands, therefore, where the 43 priority townships identified in this report must be regarded as the main representative sample of the whole national resource, the protection of only small areas is likely to be inadequate. A more sophisticated and integrated approach to management in the rapidly changing rural context will need to be identified and implemented. This new report gives us a starting point to meet this challenge.

## Strategies for understanding and protection

The first, and perhaps most significant, result of the Midlands Open Fields project, therefore, as with all MPP work, is to increase understanding of the archaeological resource and to raise awareness of its significance and increasing rarity. It firmly establishes a need for considered and effective management of what little remains. It is important to ensure that a representative number of large areas of ridge and furrow is preserved for future generations to appreciate. This sample must include sufficiently large areas to allow a very broad understanding of the social and agricultural system of which they were part. Ridge and furrow is not simply a series of ridges; the layout, shape and inter-relationship of ridges all have a part to play in understanding the past. Nor is ridge and furrow merely evidence for past land-use. It is also an important part of the present-day character of landscape and of the countryside, giving depth and patina to the environment which constitutes one of the prime historic dimensions of Countryside Character as recently defined by the Countryside Agency and English Nature (Countryside Commission 1998, Countryside Agency 1999). It also has a significant and socially important visual and aesthetic value. There are modern day social values too. In eastern,

*“Ridge and furrow  
... is an important  
part of the present-  
day character of  
landscape and of the  
countryside”*

*"Ridge and furrow preserves below it ... the archaeological remains of still older landscapes"*

lowland England, for example, permanent grassland is the land-use perhaps most able to provide community value such as access to the countryside. Ridge and furrow's preservation will also conserve old grassland with its own special ecological significance, and it will encourage the retention of the enclosure hedgerow landscape which replaced the open fields, and which in their own way are locally or regionally distinctive. Ridge and furrow also preserves below it, unseen, the archaeological remains of still older landscapes. Its role in protecting the prehistoric remains in the Midlands is another reason for it to be valued archaeologically, even if these remains are as yet difficult to assess.

It should not, however, be forgotten that the archaeological remains of the open field systems are not simply of importance for their educational and amenity value, as exemplars of a major system of agriculture that is now lost. These remains also have a research potential that needs to be defined and managed if that potential is to be realised in the long term. It will be important to use a range of archaeological techniques to recover, as far as possible, the complete pattern so that in each case the whole field system can be better understood. This is why account was taken in the assessment process of the documentary potential of each field system, as that evidence will be essential to understand the character, origins and development of this system of agriculture. There will also be other archaeological evidence in the form of pottery scatters from contemporary manuring practices, which are likely to vary both chronologically and spatially through each system. The recovery of this evidence may add significantly to the understanding of the functioning of the field system, as will environmental data that may exist within some townships in waterlogged deposits contemporary with the field system.

Other archaeological research potentials may also exist with regard to the study of the settlement pattern and land-use which preceded the laying out of the open field system. These matters need addressing by the preparation and implementation of a research framework for the study of open field systems. Then the potential of the resource can be realised as the evidence is lost to continuing cultivation, development and other land-use change. Without a research framework, the preserved examples of ridge and furrow, however extensive, will be severely devalued as an archaeological resource.

*"This report's main achievement is to identify those areas ... which must be our priority for conservation and protection."*

However, preservation of ridge and furrow is not an easy or straightforward matter. This new report enables us to start to get to grips with the issue, but it does not provide a full solution. Its main achievement is to identify those areas which are most significant at landscape scale, and which must be our priority for any programme of conservation and protection. The overall resources of ridge and furrow can now be crudely divided into two: first, smaller survivals, often close to surviving remains of contemporary villages, where we can hope to achieve conservation using established approaches, as mentioned above, through scheduling and agri-environmental schemes, and, second, the 43 'priority townships' where the scale of the remains requires new approaches. Even in these few townships of exceptional earthwork survival, a substantial percentage of the ridge and furrow has still been lost.

Simply defining these 43 priority areas is a constructive step, which allows existing methods and procedures to be harnessed. The majority, for example, lie wholly or mainly in areas of special landscape value defined in local authority development plans, or are

the subject of local plan policies or management proposals in landscape/countryside assessment projects, or lie within other designations such as conservation areas, Environmentally Sensitive Areas or Sites of Special Scientific Interest. Their identification as priorities for ridge and furrow conservation therefore act as a trigger for special consideration when landscape strategies are formulated, or development plan policies are defined, or when planning applications are considered during development control. This was, indeed, one of our aims when designing the project. The report and its supporting database is already embedded in the SMRs of the relevant county councils, and their archaeologists and planning officers can now take account of this new information. Any scheduling within the 43 townships will obviously strengthen protection, by adding Scheduled Monument Consent (SMC) controls to those of the planning system, but better management should be achievable even without such designation.

Improvement to the treatment of ridge and furrow in the planning process is only part, and not the larger part, of the challenge facing us. Agriculture poses the single greatest threat to any part of England's archaeological resource. Agricultural destruction, whether wholesale or piecemeal, as English Heritage's Monuments At Risk Survey report has recently confirmed, is the main cause of loss. Yet at the same time, agriculture is the least controlled of the major areas of change. Almost all agricultural operations - and certainly ploughing, even if *de novo* - do not constitute 'development' and therefore do not require planning permission. Almost the only relevant restrictions are the partial controls on hedgerow removal. The 1979 Ancient Monuments Act, which enables scheduling and imposes SMC controls, is associated with statutory permitted rights ('class consent') to allow existing cultivation to continue. SMC is needed for new ploughing, but refusal of consent carries the cost of compensation, as indeed would a removal of class consent. The UK has not yet introduced Environmental Assessment for new ploughing, even though this forms part of the potential European Union package for landscape conservation, and one which had been seen as a useful way forward for preserving ridge and furrow. Similarly, the Common Agricultural Policy (CAP) and market forces more generally conspire to persuade farmers to extend intensive cultivation into areas of old grassland.

The small sums available in the agri-environmental budgets such as Stewardship, particularly as they are limited to 10 year schemes and impose only moderate controls, are an inadequate counterbalance to the economic benefits available for arable, both in terms of cash-flow revenue stream and capital or annual profits. Ways of moderating the market, such as cross-compliance and related instruments, are under discussion, but again their countervailing influence may well be slight.

It is a great paradox of course that ridge and furrow, a relict of arable cultivation, has only survived into this century because it was managed as grassland by farmers, and is now threatened with destruction by a return to arable. The expansion of intensive arable cultivation is caused, or at least enabled, by changes in agriculture at macro-economic level which are hard to reverse. Even without the CAP, it is likely that in this area arable farming would be more economically attractive than pastoral, and the goal of any sustainable management for ridge and furrow must be to counterbalance those market forces which encourage its ploughing-up.

*"Agriculture poses the single greatest threat to England's archaeological resource"*

It is too easy, therefore, to see large-area scheduling and the restrictive protection which it imposes as the only effective instrument of protection that is available. Scheduling would have to be used sparingly, not least because of its potential expense in terms of compensation and its cost in terms of interfering with agricultural development. Scheduled status can however be a valuable and effective marker of government policy, indicating that government believes that an area of land needs particular care and long term preservation, and that this need might appropriately take precedence over other competing land uses. A management regime supported by scheduling however must also be sustainable in economic terms, because even scheduled ridge and furrow will need appropriate land management of some type, which will need to be financed, preferably as part of a self-sustaining but appropriate market-based economic activity. The countryside needs to be used - it cannot simply be kept unchanged and untouched, outside modern life. This is why the Countryside Stewardship scheme which helps farmers to find environmentally-friendly ways of working the land is held up by this report as one potential instrument for preservation, despite its current limitations, as described in paragraph 7.3.2.

*"This new report will help ... to develop sustainable policies towards the protection of the remains of the medieval open fields"*

The issues are, of course, very far-reaching and not confined to the management of ridge and furrow. The question of how the countryside is managed in the 21st century, by whom and for what reasons, continues to rise up the political agenda, and the historic rural environment needs to be seen as one aspect of this (Grenville 1999). In small measure, this report for MPP on ridge and furrow makes a contribution to this much wider debate. Ridge and furrow is a test case, as also, for instance, are hedgerows. It is not clear yet what will finally emerge from the reform of CAP, or from the debate on rural regeneration. The way forward for rural policy however must take account of the existing - in other words, the historically-derived - character and significance of the countryside (Fairclough et al 1999). One major aspect of this, among many, in the East Midlands at least, is the contribution that ridge and furrow makes to countryside character, local identity and sense of place. This new report will help English Heritage, landowners and local authorities to develop sustainable policies towards the protection of the remains of the medieval open fields which once characterised a large part of England. The first step is to draw the issue to a wider audience, as a contribution to the broader debate on the countryside and its place in modern society.

Graham Fairclough  
Monuments and Countryside Protection Programmes,  
English Heritage

## 2: Introduction

### 2.1 Context of the recent work

English Heritage's Monuments Protection Programme (MPP) commissioned work in 1993-95 to map the diversity of rural settlement and provide new national Monument Class Descriptions (MCDs) for medieval settlement remains. As a result of the study, England has been divided into three zones called 'Provinces', each of which is further divided into sub-Provinces and smaller local regions. Two sub-Provinces in the Central Region - Central Inner Midlands (CINMD) and Central East Midlands (CEMID) - formed the study area for this open field project. The methodology and preliminary results were published in 1998, followed by full publication in 2000 of *An Atlas of Rural Settlement in England* (Roberts and Wrathmell 1998, 2000).

Open fields have a date range from the late Saxon period to the 19th century and relate to settlements, normally being the major supporting economic component in most lowland townships. Fields, as well as settlements, need classifying and defining by an MCD since they form a monument class in their own right.

In response to the readily apparent rapid loss of open field ridge and furrow (the physical remains of open field strips found throughout the study area), Northamptonshire Heritage had already commissioned a report that highlighted destruction rates in Northamptonshire, caused mainly by ploughing. A list was prepared, based on rapid assessment and professional judgement, of those parts of the county where the best preserved examples of ridge and furrow with good research potential survive (Hall 1993).

Following on from the Northamptonshire Heritage report, English Heritage commissioned an MPP pilot study of Northamptonshire, chosen because its historical records are good and detailed mapping of field systems is well advanced. The study was used to determine parameters suitable for MPP monument classification in the Midland part of the Central Province. An MCD for Midland open fields was prepared (see Appendix 1).

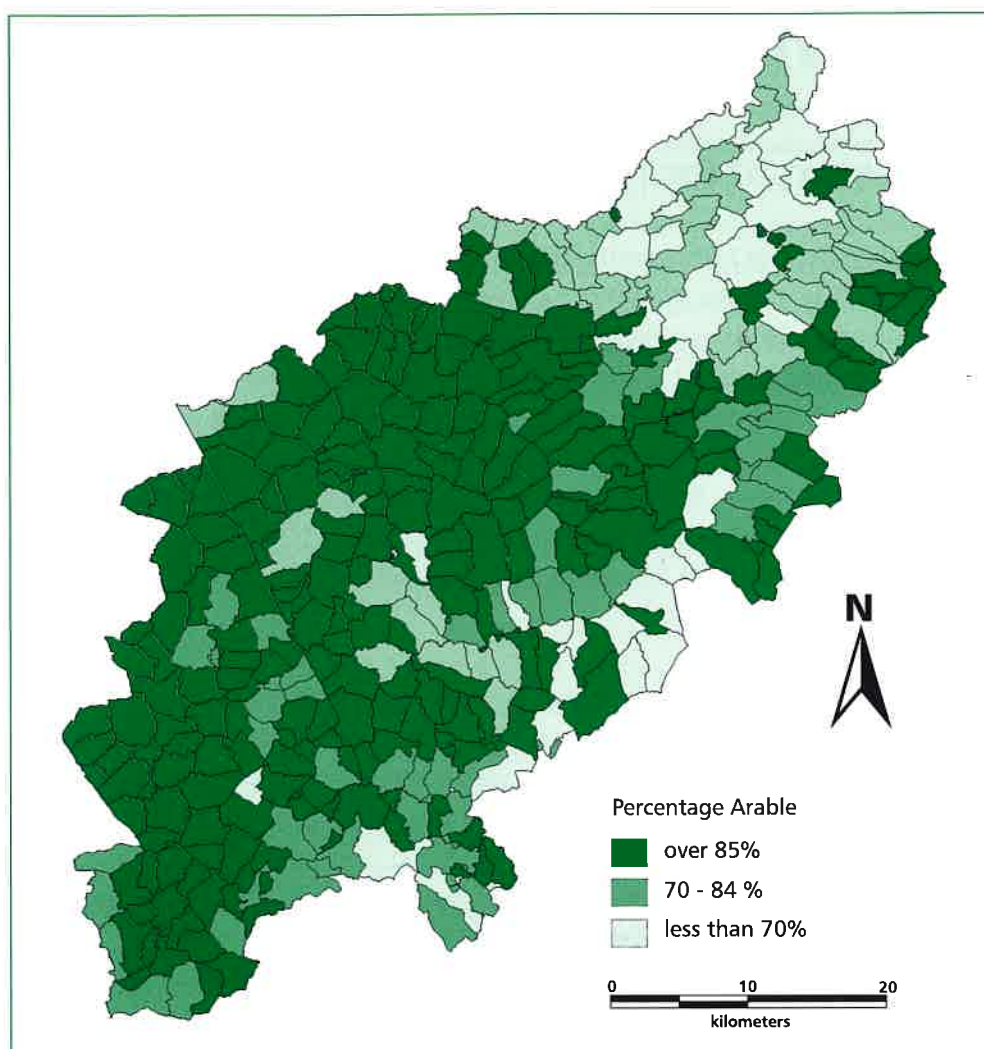

*Hungarton, Leicestershire,  
SK 695 060, 697 090 (CUCAP  
Zkn HM 0280, 1999)*

### 2.2 Midland open fields

The land-use and resources available in medieval townships (the smallest unit containing a complete field system) can be broken down into four main types: arable, meadow, woodland and other 'waste' (heath, moor, fen). The amount of each particular resource varied in different parts of the country and varied through time. In hilly areas much of the terrain was unsuitable for arable which always remained a low percentage of the total. In the Midlands, many townships were characterised by having a large proportion of arable. In some areas arable reached 90% of a township and other resources were reduced to small areas.

**Figure 1: Open field arable in medieval Northamptonshire townships**  
From unpublished fieldwork by David Hall

Land-use, therefore, marks a fundamental division of field economies between highland and lowland zones. Where there was a low proportion of arable, the economy was balanced with plenty of fodder for animals, and a pastoral regime was often dominant. Highly arable areas were able to produce much corn but developed a mixed farming system under strain. There was not enough meadow and pasture either for the daily grazing needs of animals or to provide winter hay. The solution was to allow animals to graze on fallow land which then had to be left in large blocks. A further consequence was that each holding had to be uniformly distributed over a township to ensure that part of it would produce crops and not all would lie fallow in a particular year.

The Midlands are an example of a lowland area with a high proportion of arable in most townships. The arable of former open field strips survives as earthworks in the area as well-known ridge and furrow. The present study of Midland open fields has been made within the same framework as the medieval settlement analysis. As well as giving the physical setting for a settlement and providing its main economic support, Midland fields relate to settlements in various subtle ways. Among the most important is the planned nature of many field systems, there being a regular tenurial cycle of strip ownership that is reflected in the physical structure of the fields which can be related to the Domesday fiscal assessments made in 1086.

The Northamptonshire pilot project found that there was a very high percentage of arable away from woodlands - figure 1. The relative proportions of resources of arable, wood and meadow are suitable parameters to define open field and predict where regular Midland fields are likely to occur. There was a widespread change from two to three fields from the early Middle Ages until the 17th century, by which time most townships had a three-course cultivation (even if there were more than three named fields) - figures 2 and 3. Within a township there was nearly always a single settlement. Townships vary in size but this seems to have no effect on the field system types. Only a few examples of multiple settlement occur within one township, some of which have very complex fields.

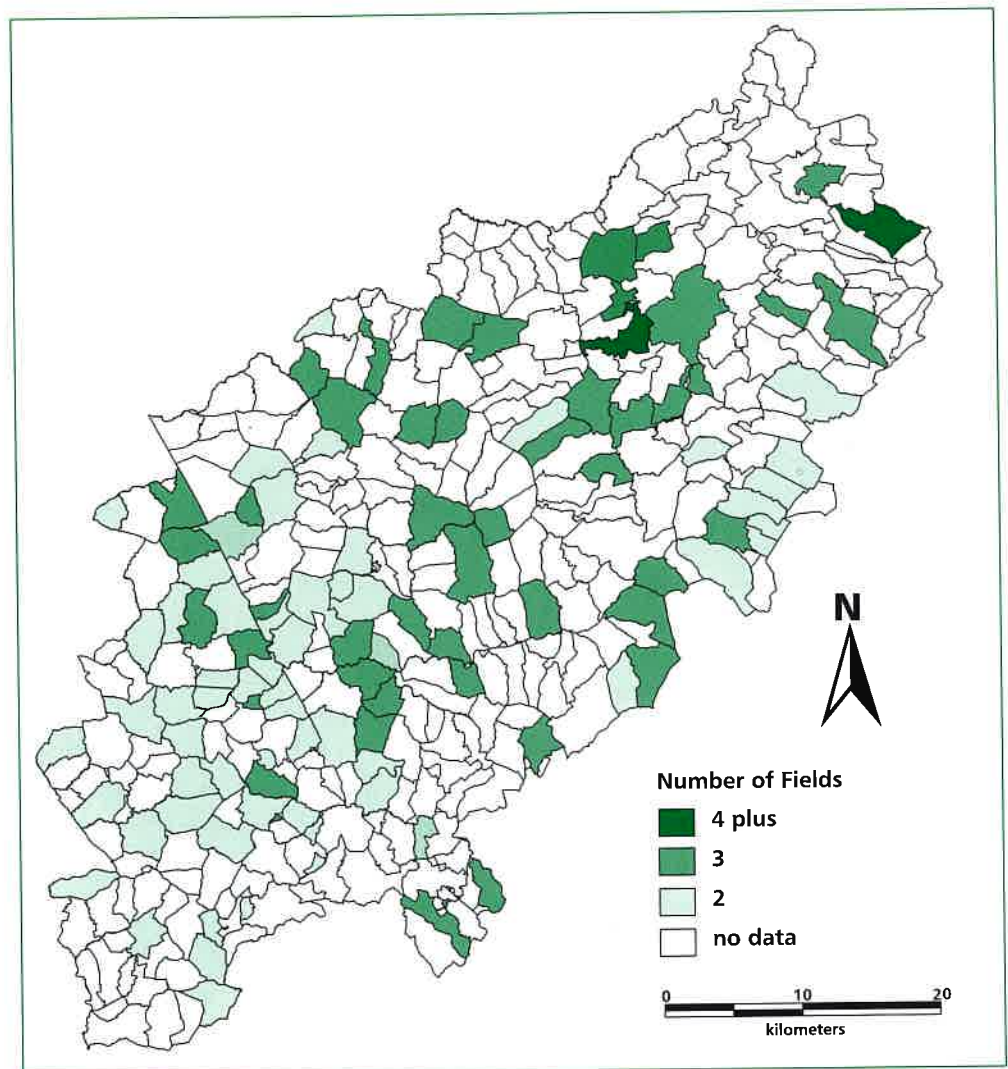

There was correlation between field types and the MPP settlement local regions that occur in Northamptonshire, especially in wooded districts, where multiple fields frequently occur. However the major boundary division between the CEMID (East Midlands) and CINMD (Inner Midlands) sub-Provinces was not reflected in field system types: settlement in both sub-Provinces was related to apparently similar field types, at least in terms of the MCD and surviving evidence.

It was recommended that examples of field systems for further study or preservation should be selected according to the available resources of woodland and meadow. Samples of all field system types should be chosen. Selection should also take account of the date of enclosure, historical documentation, visual quality, and association with medieval settlements of national importance already identified by the MPP study.

## 2.3 The present report and study area

Recognising the urgent need to identify surviving Midland ridge and furrow so that samples can be considered for preservation and appropriate agricultural management, English Heritage commissioned Northamptonshire Heritage to implement the recommendations of the pilot study. Northamptonshire Heritage sub-contracted Rog Palmer to record information from aerial photographs and David Hall to collect historical data and to undertake the overall assessment with Glenn Foard and working to a Steering Group of English Heritage staff and archaeological officers of the participating County Councils. This report describes the methodology and results of the study.

The area studied, the Midland Core of the Central Province, comprises two of the sub-Provinces defined by Roberts and Wrathmell in their work on rural settlement at a national scale (Roberts and Wrathmell 1998, 2000) called the Inner Midlands and the East Midlands (CINMD and CEMID). Together, they form a large block extending from the Trent Valley in the north to the chalk escarpment in the south, and from the edge of the Fens in the east to a less topographically-defined line in the west. Based upon mid-19th century settlement characteristics, these sub-Provinces cut across the frameworks provided by historic or modern counties, defining an area in which both natural and cultural landscape contrasts are subtle rather than accentuated. The division between the East Midlands and the Inner Midlands depends upon no more than slight variations in the densities of the

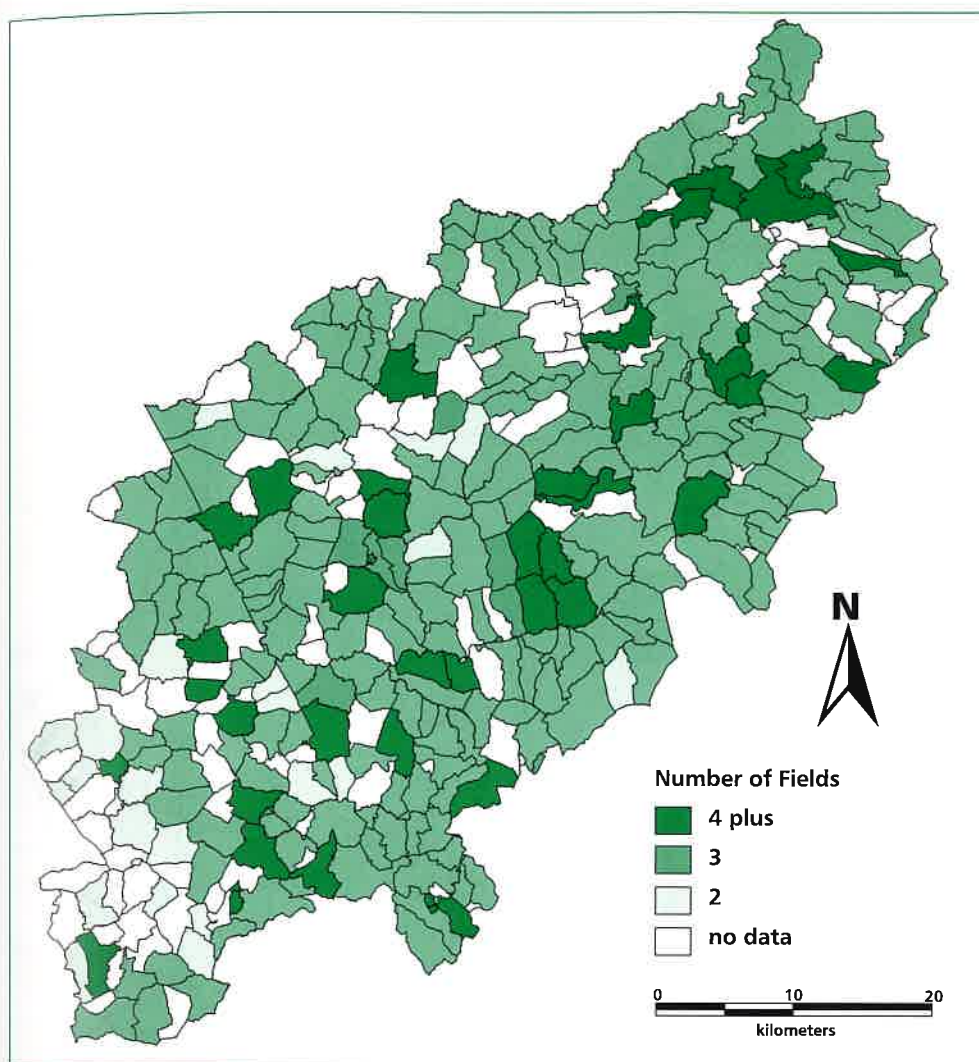

**Figure 2: Northamptonshire field systems during the 14th century**  
From Hall 1995 with additions

dispersed farmsteads intercalated between nucleations. It is a 'boundary' that may be as much a product of subtle factors operating in the late 18th or early 19th-centuries as the result of any deeply structured and ancient historical forces. Both sub-Provinces have long been landscapes of villages and hamlets which were formerly characterised by organised field systems, with common, open and subdivided town fields surrounding and supporting each settlement until the associated networks of tenurial rights and obligations were finally extinguished by enclosure.

While the whole zone is a lowland agricultural plain, there are variations in altitude, rock, drift exposures, drainage conditions and soils, which have a bearing upon those complex and long-established negotiations between human societies and the land, and which generate local small scale regional differences in settlement, field and farming systems. In the Inner Midlands (CINMD) a broad division can be established on the basis of densities of nucleations. To the north-west, local region CINMD 1 has a nucleation count for a 25 by 25 km square of 62, while to the south and east, in CINMD 2, a count of 82 appears. In CEMID densities fall within this range but nucleations are less evident in Rockingham Forest (CEMID 2a), Rutland (CEMID 2b) and High Leicestershire (CEMID 2c), and in

**Figure 3: Northamptonshire field systems during the 17th century**

From Hall 1995 with additions

other small southern local regions. The local variations are undoubtedly ancient, often being documented as wooded areas in Domesday Book.

The whole study area is characterised by low and very low densities of dispersion, and it is significant that with a few exceptions the 'wooded' local regions support densities of dispersion which differ but little from those found in the village-dominated portions. What do differ are the concentrations of nucleations present, the numbers of moated sites and the appearance of settlements bearing the affixes 'Green', 'Street' and 'End'. In origin, these local variations may reflect no more than slight differences resulting from the process of colonisation or even factors such as former management policies within ancient estates.

The study area is about 14,000 square km (3.9 million acres) and includes all or part of nine counties: Bedfordshire, Buckinghamshire, Cambridgeshire, Gloucestershire, Leicestershire, Lincolnshire, Northamptonshire, Oxfordshire and Warwickshire (figures 4 and 5). Small parts of Derbyshire, Hertfordshire, and Hereford and Worcester also belong to the two sub-Provinces, but were excluded from the study area.

### 3: Objectives

*Chastleton, Oxfordshire,  
SP 245 295 (CUCAP ZknHM  
0145, 1999)*

The overall objective of the project was to select 'priority townships' of nationally important examples suitable for preservation in order to restrict the use of conservation and management resource efforts. The selection was achieved by preparing a regional map of ridge and furrow surviving in the CEMID and CINMD regions, accompanied by information about its extent, context, and archaeological and historical importance. It should be made clear at this stage, that although the term 'open fields' is strictly an organisational and legal concept, in the area of the Midlands under consideration, lying east of Birmingham, fieldwork and documentary studies show conclusively that open field arable strips are precisely equatable with ridge and furrow, which can therefore be taken as the primary indicator, and the principal direct physical survival, of Midland Open Fields as defined by the MPP's MCD. It also is important not to confuse pre-enclosure ridges with 18th and 19th century straight ridges (both wide and narrow) ploughed within enclosed fields that have nothing to do with open fields and are not under consideration. The type of ridge and furrow studied here is typically a strip of 'wide-rig' 200m by 6-10m wide often slightly curved at the ends (formerly called a 'land'), and lies in blocks that were called furlongs.

The surviving ridge and furrow is related to its pre-enclosure land-use in so far as it could be reconstructed. It was also studied in the context of its township and for association with significant monuments, primarily the related village. The most important areas were assessed for their documentary potential. Lists were prepared, accompanied with maps of the priority townships, each example having a brief comment on the ridge and furrow, the presence of associated earthworks and the quality of available historical sources.

Four main areas of work were necessary:

- (a) General data collection over the area;
- (b) Initial selection of potential sites;
- (c) Site-specific data collection of significant sites;
- (d) Final assessment of the priority sites.

These are described fully in the next section.

## 4: Methodology of data collection

### Acquisition of electronic data

#### 4.1 Parish and township boundaries

Modern local authority civil parish boundaries were acquired electronically from digitised administrative boundaries available from the Ordnance Survey. The linear boundary data provided were converted to parish polygons by use of a programme made available in 1996. Polygons are necessary to link with a database consisting of parish names. The database allows numeric data to be transferred to the Geographical Information Systems (GIS). All data can then be presented in map form or printed as parish lists sorted in any order required.

Many modern civil parishes consist of more than one township and these have been identified and mapped for Northamptonshire. Elsewhere, modern Ordnance Survey civil parishes have been used. Some townships are shown on the Ordnance Survey First Edition 1:10,560 scale maps (1880s) and were used to prepare convenient county township maps by the English Place-Name Society (often called 'parishes'). Data from these latter maps were used manually, and not digitised, during ridge and furrow selection, since relatively few places were involved. Further information of township boundaries is available (Humphrey-Smith 1984; Kain and Oliver 1995).

There were still unknown township boundaries suspected in places that have more than one settlement in a parish. These were pursued for some of the civil parishes selected on the priority shortlist for full historical characterisation. Study of tithe and enclosure maps and the written documentation usually did (or could) establish the existence of two or more townships.

#### 4.2 Scheduled Monuments (SMs)

The Records Department of English Heritage provided a database of SMs for each county containing simple basic information (SM number (old county or new national number), parish, site name, period and NGR). These data were made compatible with the GIS and added as a separate layer; the data set was as available on 30th November 1996.

Two lists of SM numbers were supplied; pre-MPP scheduling with old county numbering system, and MPP scheduling with the new five-figure national numbers. The last includes both newly scheduled sites and previously scheduled sites that have been reviewed. The two types were presented differently on the GIS maps.

*Detail of Little Lawford,  
Warwickshire, SP 437 770  
(CUCAP ZknHN 0183, 1999)*

### 4.3 Medieval settlements identified by MPP

As a result of the MPP settlement study, Stuart Wrathmell has produced county lists of medieval settlement sites, selected to achieve a balanced national representation. These sites are undergoing further MPP assessment and, when appropriate, are recommended to the government for scheduling. The lists are on a database which was added as a layer to the GIS.

### 4.4 Further data manipulation

A programme was installed on the GIS to convert all of the mapped parameters into percentages of the township area (extents of ridge and furrow, alluvium, wood, urban development (ex-Ordnance Survey), and quarries (Northamptonshire only)). These, or any combination of them, can be printed out for each township, sorted into any desired order. The actual area of ridge and furrow was also made a required parameter (the percentage perhaps being a misleading item in very small townships).

Where wood or meadow occupied an appreciable proportion of a township, then the ridge and furrow survival would better be presented as a percentage of the original total arable area rather than the township area. The total arable is the township area less meadow, wood and vill. Corrected values were made on printed selection tables and in the gazetteer for the very few townships affected.

## Data manually collected

### 4.5 Mapping of surviving ridge and furrow

The extent of surviving ridge and furrow was identified and mapped at the 1:25,000 scale from aerial photography (AP). A total regional plot was the only way to establish current survival and had the advantage of producing comprehensive regional base-line data that will have many uses for future management and planning control. A complete record was required because none of the county SMRs had a suitable record of current ridge and furrow survival.

The sources of information were the most recent complete vertical aerial surveys held by local authorities (Beds. 1996; Bucks. 1995; Cambs. 1988; Gloucs. 1993; Leics. 1991; Lincs. 1993-4; Northants. 1990; Oxford 1991; Warws. 1992-4). Most of the photographs were at the 1:10,000 scale.

Two levels of recording were felt necessary from the results of a preliminary plot of sheet SP 45, which straddles the Warwickshire-Northamptonshire border. The study showed the difficulties caused by photographs taken in late spring; crops and pasture fields have a similar shade of green and, with long vegetation photographed at midday, there are no shadows to emphasise ridge and furrow.

Care has to be taken to recognise and eliminate cropmark ridge and furrow. Fields confidently identified as earthwork ridge and furrow were outlined on the maps in green and those less certain in purple.

Rog Palmer mapped the AP data for all counties except Cambridgeshire, which had already been recorded. It was thought best to have one person record the whole area, as far as possible, to ensure consistency. All the mapped surviving areas of ridge and furrow were digitised onto the GIS. A report discussing the quality of the photographs, the use of a stereoscope and problems of interpretation has been submitted to the counties (by Rog Palmer). The use of photocopies of Ordnance maps causes displacement of some data. This can be rectified on the GIS for Northamptonshire which has a digitised Ordnance Survey (OS) base; the corrections can be made for other counties using their own OS digitised mapping.

From recent information for several townships where ridge and furrow is known to survive, it was apparent that the Palmer plots of 'certain' and 'less certain' examples were equally sound. That is, although the aerial photographs did not record all ridge and furrow clearly, most of that mapped was of good quality. It is likely that yet more will be added from ground survey which will be able to record very low-profile ancient ridge and furrow not visible on APs taken at an altitude of 1,500m. The two types were treated as a single database for all further work.

In discussion with county council archaeological staff, it was confirmed that some (probably only a low percentage) ridge and furrow had not been recorded. There was the possibility that (oblique) photographs in the county SMRs could be used to enhance the record. This was not pursued because only a random selection of sites would be involved and there was uncertainty whether the ridge and furrow still survived. The Palmer plots were therefore left unaltered, to maintain a uniform database.

## 4.6 Parliamentary enclosure dates added to the GIS database

Township enclosure dates were required to make a representative selection of ridge and furrow preserved at different times. As an approximation, it can be taken that the later an enclosure then the higher the profile of the ridges. Steep ridges are visually good, but examples of low-profile ridge and furrow in old enclosures are also needed in any samples selected for preservation.

Dates of Parliamentary enclosure are readily available from national published lists; parishes and townships missing from the lists are generally places that have earlier enclosure (but a few will be 18th or 19th century private agreements).

Parliamentary enclosure dates were collected for the whole of the study area from the lists of Tate and Turner (1978). The dates were transferred to the GIS via the parish database. Figure 6 shows the regional distribution of Parliamentary enclosure. White areas are non-Parliamentary enclosures (mostly before c.1730).

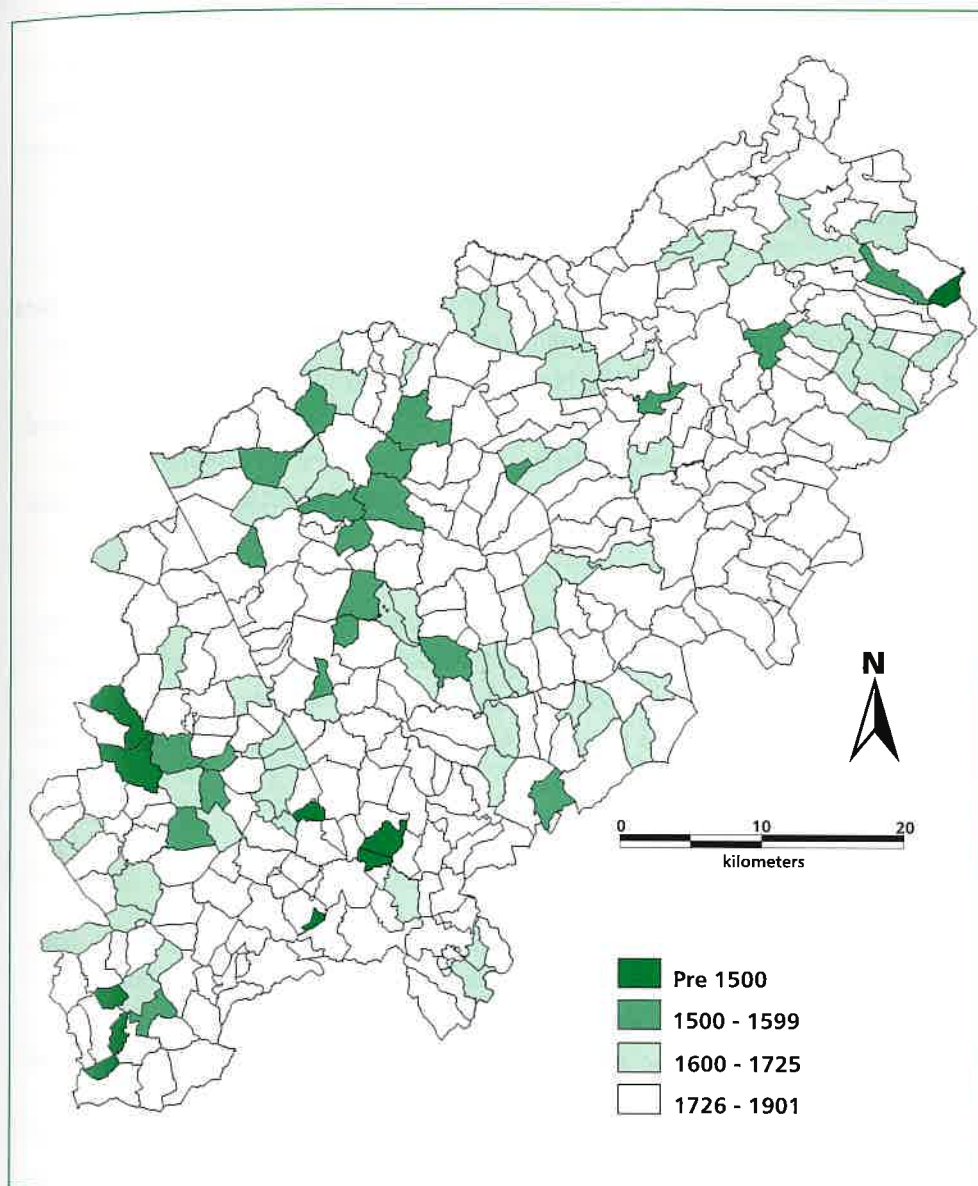

**Figure 6: Parliamentary enclosure**  
From Tate and Turner 1978

No complete national or regional analysis of pre-Parliamentary enclosure has been published. The study area here is fairly uniform in terms of its Parliamentary enclosure history, and the earlier stages of enclosure are also likely to be similar regionally. It is therefore valid to take the published study of Northamptonshire as representative (Hall 1997), figure 7. Of the 390 townships in the historic county (pre-1964, including Peterborough) 64% were Parliamentary (1727-1901). The pre-Parliamentary enclosure profiles are:

15th century	3% (of 390),
16th century	13%,
17th century	15%,
1700-26	2%; a further 2% were enclosed privately after 1726.

See section 7.2 for the enclosure-date profile of the 43 priority townships.

**Figure 7: Northamptonshire enclosure dates grouped by century**  
From Hall 1997

## 4.7 Historic land-use

Ridge and furrow samples were to be selected from the main land-use types. That is, having some townships with high arable content and some with woodland etc. To provide the landscape background, a regional land-use map was prepared in terms of its main components of meadow, woodland and arable.

The most satisfactory information is available on large-scale parish enclosure, estate and tithe maps, mainly of 18th and early 19th century date. Some parts of the area have had data collected from these sources (Warwickshire, all the relevant part of Gloucestershire and some of North Oxfordshire (mapped at 1:50,000 by Della Hooke); much of Bedfordshire is similarly mapped by Steven Coleman).

However, the whole study area could not be covered in this kind of detail within the timescale of the present work.

### Wood and heath

As an approximation, data for woodland were taken from the county one-inch series (produced by Greenwood and Bryant), which between them are complete for the area; they are dated 1823-7. Despite their late date, the maps record woodland that remained substantially unchanged since the Middle Ages. There will be omissions, since some deforestation occurred, for instance, during the Civil War, especially in royal parks.

The 1825 maps have the merit of being sufficiently accurate and detailed to transfer data rapidly to 1:50,000 maps. Care was taken not to include woodland in parks and linear belts that were associated with great houses and not likely to be of medieval origin. Inaccuracies will remain where large houses or parks are adjacent to medieval woodland, for it cannot be known what woodland has been planted in recent centuries (without fieldwork). The data on the 1:50,000 maps were transferred to 1:100,000 administrative Ordnance Survey maps.

Heaths did not occur extensively in the study area during the Middle Ages and are very difficult to map. Greenwood marks a few (in Oxfordshire), but most of them had been obliterated by enclosure before 1825. One of the largest heaths was Dunsmore, Warwickshire. Accurate data for heathland would require an extensive detailed study as has been made for Northamptonshire.

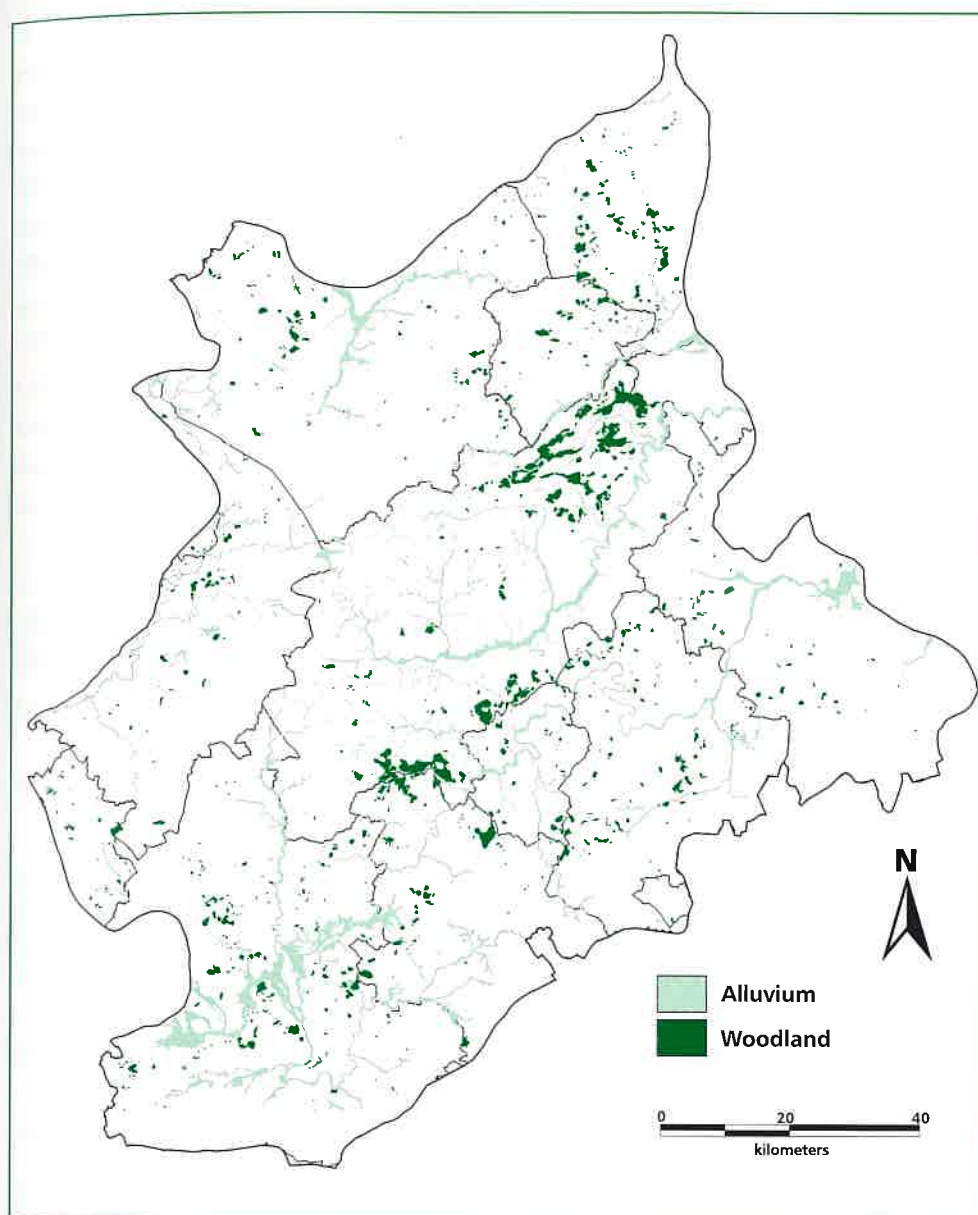

### Meadow

By contrast it is a simple matter to map open field meadow. Fieldwork has shown that alluvium marked on British Geological Survey drift maps is usually exactly coterminous with the extent of open field flooding meadows. There are some exceptions; in a few cases ridge and furrow is found on alluvium, which must be older than the Middle Ages (at for example Hillmorton, Warws., Ludgershall and Shabbington, Bucks.). This was readily apparent during GIS interaction of data, when ridge and furrow was seen to lie on some of the upland 'alluvium'. This type of alluvium was omitted from consideration when selecting samples that were associated with meadow. A generalised alluvium plan was made on OS 1:100,000 Administrative Plans. Figure 8 shows the extent of woodland and meadow in the study area.

### Landscape survival; urbanisation and quarrying

The degree of survival within a township also needs to be considered. As well as earthwork ridge and furrow, the adjacent modern arable land has research potential. Furlong boundaries can be mapped and details of many furrows will probably be available from aerial photographs. If the surrounding area is heavily urbanised or extensively quarried then there is little further research potential. It is therefore necessary to determine these two pieces of information as part of the selection process. Urbanisation data (the area built up) are available electronically from the Ordnance Survey.

Quarry data are held by the county SMRs or county minerals departments. Northamptonshire quarries are already mapped on the GIS; other counties will have to allow for quarries as part of the MPP discrimination scoring 'potential' value for any particular example.

**Figure 8: Distribution of woodland (c. 1825) and alluvium**  
From Greenwood's county maps and British Geological Survey mapping

SP 795 910,  
February 1996*

## 5: First shortlist preparation

The large amount of information collected was assembled for analysis on the GIS. A pilot was first run using the Northamptonshire data examined township by township. For each township, the boundary was fitted into the screen and within it were displayed the ridge and furrow, both types as one colour (green), alluvium (yellow), woodland (blue), SMs (red stars and triangles), and MPP settlement sites (black dots). A qualitative scoring was then made for each place jointly by Glenn Foard and David Hall. This took into account (qualitatively) the area of ridge and furrow, its consolidation or fragmentation, the association with MPP sites etc.

Enclosure dates were not used in the selection process at this stage. There was the possibility of interaction with the whole SMR which was done in a few instances, but was found unnecessary as a routine because the assessors were sufficiently familiar with each place to know if, say, there were important but unscheduled remains of abandoned medieval settlement adjacent to the ridge and furrow.

Each township in the whole county was scored on a four-point system. The scores were:

1. **Poor:** i.e. little or no ridge and furrow.
2. **Fair:** some ridge and furrow, with little association.
3. **Good:** fair quantity of ridge and furrow with vill and other associations.
4. **Outstanding:** a large area of ridge and furrow, usually with associations.

Although it was obvious on-screen when there was a large area of ridge and furrow, the assessors deliberately did not have the percentage figures available to prevent influencing the scoring. Samples of what were probably at the upper end of score 2 were occasionally assigned 3 to allow for associations or because there was special terrain value (e.g. Passenham, Northamptonshire, which is a rare example of ridge and furrow in a township that has both meadow and wood). Notes were made directly on-screen of any positive association or any devaluing item (like urbanisation reducing research potential).

A database table was then printed in order of decreasing percentage of surviving ridge and furrow along with all other data. Of particular interest was the percentage range of ridge and furrow that related to the assigned scores of 3 and 4. It was found that score 3 had the range 14-28% survival (16 townships) and score 4 fell in the range 22-49% (9).

The criteria and methodology for the other counties was then defined. It was felt that, since townships with the highest percentage of ridge and furrow were sought, no township with scores of 1 and 2 would be considered (partly because the survival is so low, and partly because the number of townships would be large and the process not selective). Other counties were each examined in turn on-screen as had been done for Northamptonshire, but only scoring townships with greater than 9% ridge and furrow survival (to ensure that all scores 3 and 4 would be found). At this first selection, maps and full tables of township data were printed for each county. They were sent to the officers of each county and to English Heritage for initial discussion.

A provisional township shortlist was made by selecting places with more than 18% total ridge and furrow survival, of which there were 104. Refinements were made to this first shortlist in several ways. Corrections were needed for the existence of unmapped townships. So where a modern civil parish that consisted of two townships had most of its ridge and furrow in just one township, then the correct percentage value for that township would be nearly double that of the civil parish. The percentages of survival for townships with meadow and woodland were also corrected in the few examples affected.

The initial shortlist was based on greatest survival of ridge and furrow without regard, in the first instance, to the Roberts and Wrathmell sub-Provinces and local regions. Most of the highest percentages fall in the large local regions of the study area, those with extreme settlement nucleation; that is, in CEMID 1 and CINMD 1 and 2.

Township samples were also required, in limited number, from some of the small local regions, even though most of them have less than 18% ridge and furrow survival. A second shortlist was prepared, selecting some of these local regions, the best of the MPP settlement sites, and places with woodland and meadow.

In all, 140 townships were involved in both shortlists.

*Brixworth, Northamptonshire,  
SP 740 690, April 1974*

## 6: Final assessment and shortlist

The provisional shortlists and maps were taken to each county archaeologist or SMR officer for discussion. Every township was jointly assessed, taking into account the degree of fragmentation of its ridge and furrow and, in particular, whether it was associated with village earthworks. The areas of earthworks were added to the ridge and furrow maps and later digitised. Any other relevant points were considered, like two Roman towns that are partly covered with ridge and furrow, giving important chronological value (Venonae and Alchester).

Record offices were visited and the documentation of all the places in the first shortlist briefly viewed in indexes and, occasionally, by production of an original map. For each township, references were found for maps, glebe terriers, deeds and estate papers.

A Gazetteer of all the places was made for each county, listing archaeological and historical data. It was referred back to the counties with recommendations for townships to be forwarded to the regional final list. The complete Gazetteer is presented in the online version of this report at [www.northamptonshire.gov.uk/goto/openfields](http://www.northamptonshire.gov.uk/goto/openfields). It contains details of the 'best' (i.e. priority) townships in the first shortlist, those with more than 18% ridge and furrow. Places in the second shortlist are not named in this report, but they have been forwarded to each county; most of them will be dealt with as part of the MPP settlement programme where it is recommended that any significant ridge and furrow adjacent to village earthworks should be included in the preserved area.

A total of 43 townships lying in 40 civil parishes is detailed in the Gazetteer. Each is accompanied by a 1:25,000 map (in the online version) showing the whole township or parish and the surviving areas of ridge and furrow.

*Ashby St Ledgers,  
Northamptonshire, SP 564 682,  
January 1979*

## 7: Discussion and recommendations

### 7.1 The priority townships

The number of 'parishes' in the whole study area is 1,577. The total consists of modern OS civil parishes for all counties except Northamptonshire, counting each urban area as 'one'. Thus Wigston Magna is part of Leicester for this purpose and has not been counted in its own right. In Northamptonshire, townships have been used since they are mapped on the GIS. The number of parishes and townships so defined are distributed among the Roberts and Wrathmell local regions as shown in Table 1, below.

CEMID region	Parish or township number	CINMD Region	Parish or township number
1	483	1	253
2a	16	2	587
2b	47		
2c	9		
2c	7		
3a	10	3	18
3b	1		
		4	32
		5	18
		6	12
		7	64
		8	20
Totals	573		1004

**Table 1: Distribution of parishes and townships among local MPP regions**

The number of townships in the 1,577 places is not known. For historic Northamptonshire, there were 315 medieval parishes and 390 townships have been identified. A similar proportion is likely in the whole area, some of the civil parishes of Leicestershire and Warwickshire having as many as 4 or 5 vills in them. Thus, with the corrections for modern urban areas, a total of c.2000 townships is likely for the study area.

The detailed assessment of the 140 sites on the first selection led to a priority list of 43 townships lying in 40 modern civil parishes. These are arranged in various ways in Tables 2, 3 and 4 on the following three pages. Of the 40 parishes, 23 have more than one settlement, implying a maximum of 63 townships, but this has not been proved in all cases. Three of the 40 parishes have two townships selected for the present study. Only seven townships had more than 40% ridge and furrow survival. The total acreage of ridge and furrow (in c.1990) in the 43 townships was 18,879 (7,640 ha), but this includes many isolated fields not part of consolidated blocks. Sixteen of the townships had been previously identified as having important settlement remains in the MPP settlement analysis.

Table 4: Priority townships arranged by county

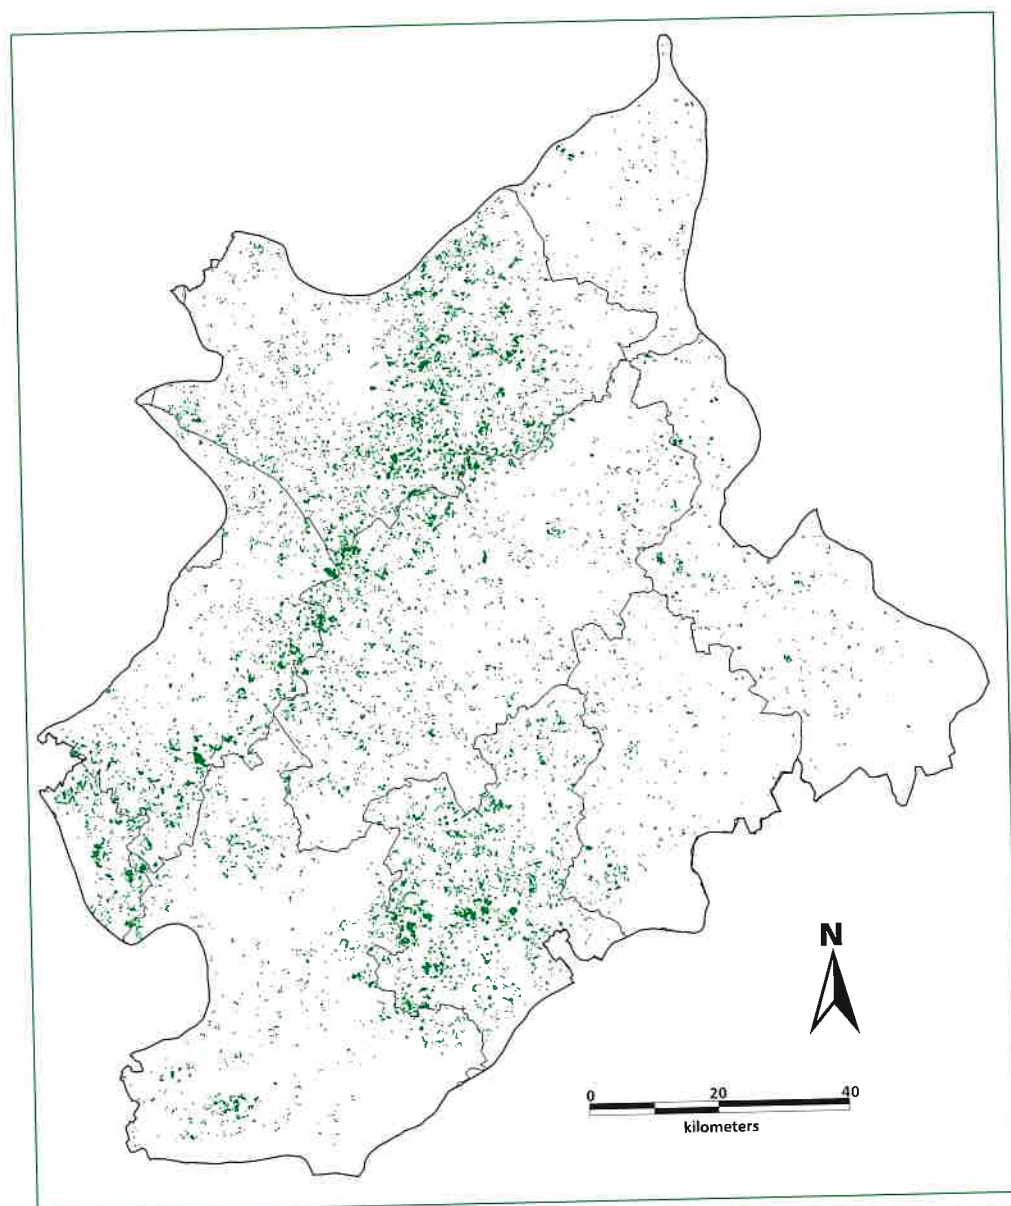

The final three columns of Table 2 deal with MPP scoring following the Midland open field MCD. There are seven items used in the discrimination scoring procedure: Group Value (association), Survival, Potential, Documentation (archaeological), Documentation (historical), Diversity and Amenity Value. The last two cannot be assessed without a site visit but the others have been valued from the data assembled, the details appearing in the Gazetteer. The five items are all on a three-point system, i.e. with maxima of three, so when squared and summed, the maximum score is 45. The values are listed in Table 2 for each site. They are further corrected under the column 'professional judgement', points being taken off if the area involved is small, or the ridge and furrow dispersed, etc. The final score is shown in the last column; it is only a temporary score and will differ from the score determined after site visits by MPP officers.

The significance of the best townships cannot be over-emphasised. That only 43 townships can be identified as having high survival (and even this means less than 40% in most cases) out of 2,000 in the area is itself an important measure of significance. In addition there are probably few or none better elsewhere in England. Very little ridge and furrow survives in continental Europe and preservation of good English examples is urgent from a European perspective. One or two of the sites should perhaps be proposed for World Heritage sites because they represent the best examples of an agricultural system that dominated Northern Europe for a thousand years. Figure 9 shows locations of the 43 townships selected. The conservation options for these sites are discussed below in section 7.3.

*"The significance of the best townships cannot be over-emphasised ... one or two of the sites should perhaps be proposed for World Heritage sites."*

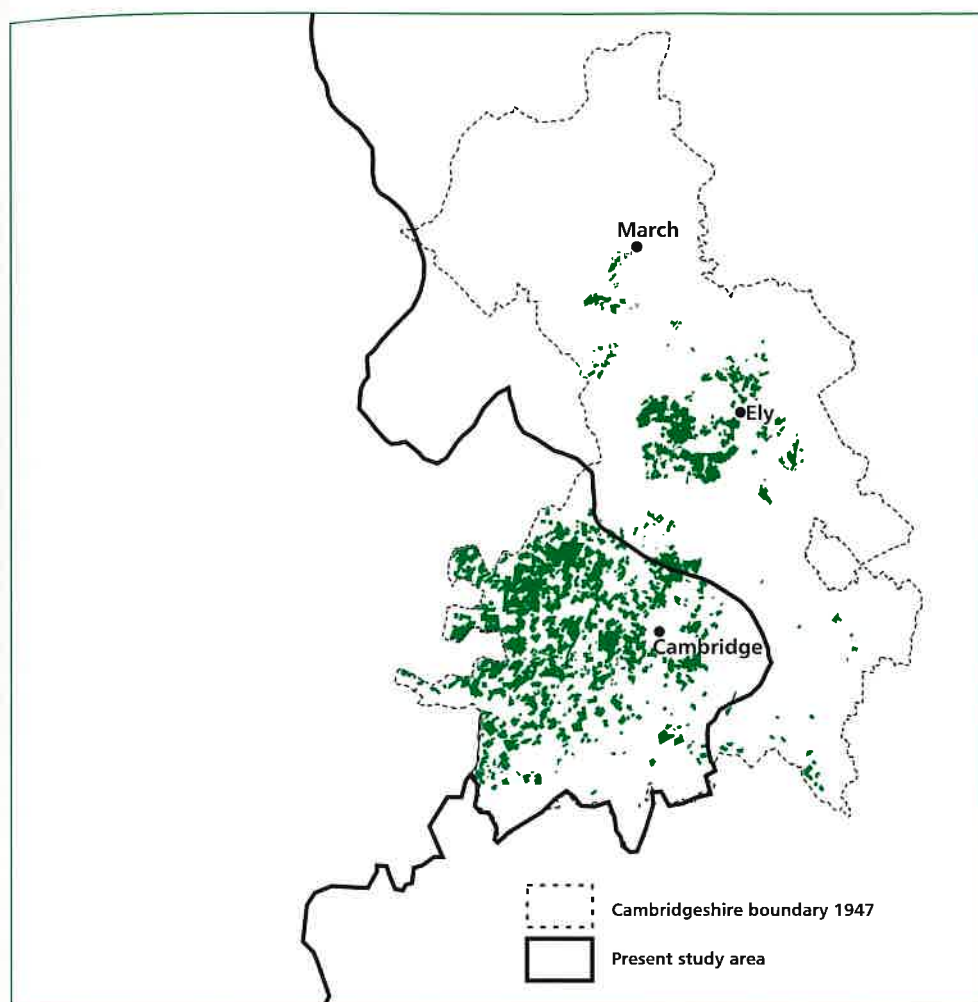

**Figure 9: Location of priority townships**

**Figure 10: Ridge and furrow distribution c. 1990**

## **7.2 Survival of ridge and furrow in priority townships lying in the large local regions (CEMID 1, CINMD 1 and 2)**

Figure 10 shows the regional distribution of surviving ridge and furrow; the west having by far the most. It is extensive on the scarp between Northamptonshire and Warwickshire and Leicestershire, as well as in central Leicestershire and central Buckinghamshire. Although Leicestershire has the most ridge and furrow, much of it is fragmented or has few associated village earthworks. It should also be remembered that not all of this ridge and furrow survived in 1998 (the date of the project); some is known to have been ploughed since the aerial photographs were taken and destruction continues. Comparison of the relevant parts of Figure 10 with the maps published by Mead and his co-workers for Buckinghamshire, Cambridgeshire and Warwickshire showing ridge and furrow distribution in c.1947, demonstrates the immense destruction that has occurred during the last 50 years, principally due to ploughing and conversion of pasture to arable (Mead 1954,

**Figure 11: Cambridgeshire ridge and furrow in 1947**

From Kain and Mead 1977

Harrison et al 1956, Kain and Mead 1977). The Cambridgeshire area published by Kain and Mead is shown in Figure 11 for comparison.

All except three of the priority townships (Belton in Rutland, Stoke Dry and Hockliffe) lie in the Roberts' local regions of extreme nucleation CEMID 1 (Soar Valley and Nene Plateau) 14 townships, CINMD 1 (Stour-Avon-Soar Clay Vales) 14 townships, and CINMD 2 (South Midlands) 13 townships. These three local regions comprise about 80% of the whole area and are therefore satisfactorily sampled. The provincial boundary between these sub-Provinces CEMID and CINMD, as suggested by the early 19th-century data, has been difficult to demonstrate in terms of field systems from the Northamptonshire studies. Further work on the priority townships may help establish its nature.

In the 43 samples selected there are relatively few with exceptionally large blocks of compact ridge and furrow. Among the largest are Ludgershall, North Marston and the Quanton townships, Bucks., Hungarton, Leics., Lower Tysoe and Shuckburgh, Warws. Only Lower Tysoe, Warws., has anywhere near a complete township survival among the large areas. Smaller townships have a high percentage survival, such as Pollicott in Ashendon, Bucks. and Sutton Bassett, Northants. Other townships with high overall totals, Braunston, Napton, Lilbourne and Hallaton, have a more fragmented survival.

The remaining townships have various merits as given in the Gazetteer, some associated with well preserved medieval settlement earthwork remains, or with good documentation. Many are likely to have more documents than indicated, especially if they have Oxford College ownership. It is difficult to get the full scope of open field records from general County Record Office indexes, they often being biased towards the records relating to the gentry, social and parish matters.

Parliamentary enclosure occurred in 23 townships or 53% of the sample. Most pre-Parliamentary enclosures are likely to be early. Of the 20 priority sites with non-Parliamentary enclosures, 10 are currently dated, of which 2 are late 15th century, 2 are 16th, and 6 are 17th century. There is therefore a good range of ridge and furrow dates from both types of enclosure. Open field maps are known for only 3 townships and a field book for only one. Several recommended places have copious medieval and later estate records.

All the townships in the Gazetteer have unusually large areas or high percentages of ridge and furrow and an attempt should be made to preserve the best. The data given provide some of the information required for MPP assessment according to the MCD. More detail will be required from SMRs to complete individual scores and, in particular, site visits need to be made.

## 7.3 Options for conservation

*“Ridge and furrow owes its survival to a particular type of agricultural land-use, and positive support for its continuance might be more effective than restrictive controls inhibiting change.”*

7.3.1 Designation as scheduled monuments (i.e. scheduling and the resultant application of central government regulation of land-use through scheduled monument consent controls) of the ridge and furrow remains of open field systems appears at first glance to be the most obvious instrument of protection. It has to be recognised, however, that the application of SMC controls to large areas of agricultural land has its problems, not least a risk that it might inhibit rural regeneration. Ridge and furrow owes its survival to a particular type of agricultural land-use, and positive support for its continuance might be more effective than restrictive controls inhibiting change. Practical rural conservation requires us to manage a living, changing landscape, rather than only to protect static monuments.

7.3.2 Some areas are already in Countryside Stewardship schemes, managed by MAFF, and although useful, such schemes are in some cases only holding operations, as agreements can be dissolved and the schemes are only operational for 10 years. A recent development has been that, after 10 years duration, schemes can be further extended for another decade. More funds have been made available and more landowners are showing interest.

However, the inability of such schemes to preserve all the surviving remains of a well preserved field system can be seen from the assessment of the conservation initiatives taken by Northamptonshire Heritage since 1994, using as a basis the townships recommended for conservation in Hall 1993. The potential for the Stewardship scheme in this aspect of historic landscape management was recognised by the Countryside Commission, and ridge and furrow was included

**Figure 12: Surviving ridge and furrow in stewardship at Clipston**  
From Northamptonshire Heritage

from 1994 as a target for the scheme in the region. A proactive approach was then taken, working through a range of land agents, encouraging landowners to put forward land in the selected townships into the scheme. The limited success of such an approach can be seen at Clipston, Northants., a parish containing the additional township of Nobold, both of which are in the priority 43 townships. After six years, the amount of land within stewardship, although considerable, falls far short of including all the ridge and furrow (figure 12). The difficulty is that initiative has to come from farmers and if any particular one is not interested, then nothing can be done and large areas of the field system continue to have no protection from destruction by cultivation. In some townships identified in the 1993 report, such as Great Oxendon and Lilbourne, despite this intensive proactive approach, areas of ridge and furrow have been levelled since 1993. The experience over six years in Northamptonshire would suggest that, without the primary protection offered by scheduling, there is no effective way of securing the long term conservation of all of the remaining areas of ridge and furrow in any particular township. The various grant schemes are valuable, but only as a complement to, not an alternative for, the use of statutory protection through scheduling. Until this problem is resolved, the Stewardship Scheme cannot be a satisfactory alternative to scheduling.

*“without the primary protection offered by scheduling ... there is no effective way of securing the long-term conservation of the remaining areas of ridge and furrow”*

7.3.3 Future changes to the Common Agricultural Policy might, eventually, direct some European funding into retention of permanent pasture. This would operate in parallel with environmental requirements, Biodiversity Action Plans and schemes pursuant to the Wildlife and Countryside Act 1981. It is stressed that none of these methods ensure preservation at present; they are only enhancement or temporary procedures. Currently, only scheduling is an effective long-term preservation strategy and even here the financial costs of, for example, refusal of Scheduled Monument Consent for ploughing, may not be politically sustainable.

7.3.4 Some townships are still in the hands of family or institutional estates (such as Oxford Colleges and Eton College), and the owners should be made aware of the historic interest. It will be easier to negotiate with a single landowner who may be willing to influence tenants. Another approach may be to alert the National Trust of the landscape importance of ridge and furrow, with a view to purchase land as farms come up for sale.

## 7.4 Survival of ridge and furrow in small local regions of CEMID and CINMD and alluviated & wooded townships

Only three examples of the small local regions are represented in the priority list. Lower levels of ridge and furrow survival were considered, as the small local regions were of interest and should not be overlooked. Nearly all of them have elements of dispersed settlement and most are associated with woodland. Field system details are only known in Northamptonshire, where it was found that there was a tendency for multiple fields to occur. The same is likely for other counties and there may be several townships in a parish.

### CEMID 2a and 2b: Rockingham Forest and Rutland

Only low percentages of ridge and furrow survive (4-17%). This is a woody area; 35 of the 54 townships in Northamptonshire have more than 9%, compared with the 100 townships in the three large local regions, of which only 7 have >2% and most 0% wood. The best place in this local region is Warkton, Northants., with 17% ridge and furrow, and excellent documentation including open field maps, a field book, medieval charters etc (not in the Gazetteer because it falls below the 19% threshold and has reduced potential because of quarrying).

### CEMID 2c: High Leicestershire

This area lies in two separate small regions; 22 parishes, of which 9 have >2% wood. Of the 5 with >18% ridge and furrow, only Belton in Rutland, 36%, and Stoke Dry, 23%, are in the priority list.

### CEMID 3a and 3b, in Beds. and Cambs.

The maximum ridge and furrow survival is 4%; none of these sites can be recommended and SM enhancement is not possible either, as none of them has an MPP settlement site.

**CINMD 3, North-east Warwickshire (Anker Slope)**

None has over 18% ridge and furrow; the best are Burbage, Leics. 11%, Shilton, Warws. 11%, Higham on Hill, Leics. 12%, Caldecote, Warws. 13%, and Witherley, Leics. 16%.

**CINMD 4, Charnwood Forest and Swadlincote, North-west Leics.**

Some places have woodland; the highest surviving ridge and furrow occurs at Anstey 10% and Ratby 11%.

**CINMD 5, Newport Pagnell-Bedford Hills, in Bucks. and Northants.**

A very woody region. In all, there are 18 townships, 7 having more than 20% wood. Foscott, Bucks. has 21% ridge and furrow and 7% wood (but is not in the priority list).

**CINMD 6, Salcey Forest & Yardley Chase, in Bucks., Beds., and Northants.**

A woodland area; the best townships are Horton, Northants. 12%, and Clifton Reynes, Bucks. 13%.

**CINMD 7, Ousel-Ouse Divide, in Beds. and Bucks.**

Rather woody; all the Bedfordshire highest percentage ridge and furrow places are in this local region, Hockliffe appearing in the Gazetteer. The recently scheduled Potsgrove has 11% ridge and furrow.

**CINMD 8, Thurleigh Low Plateau, in Beds. and Cambs.**

Fairly woody, but almost no ridge and furrow survives. The best two are Renhold, Beds. 6%, and Southhoe and Midloe, Cambs. 4%.

Since few of the places in the small local regions have much ridge and furrow, it is not suggested that any of them receive attention at this stage, outside the MPP settlement programme. This programme is assessing nationally important medieval settlement sites in order to suggest appropriate management approaches. Where this involves scheduling, it will be possible to incorporate significant areas of well-preserved ridge and furrow, if in clear relationship to the settlement site, to be included in scheduled areas. Such an approach is likely to be utilised in other areas of the country which do not possess extensive survival of ridge and furrow.

**Meadow**

Townships with appreciable meadow (measured by alluviation) and good ridge and furrow survival are not common. Only 13 places above 18% ridge and furrow have significant alluvium ranging from 16-42%. However, several of these have pre-medieval alluvium, and only 4 with open field alluvium are in the Gazetteer; Little Lawford, Warws., 16% alluvium, Weston by Welland, 31%, Easton Neston, 17%, and Ashley 21%, all in Northants. Passenham, Northants., has only 10% ridge and furrow and 14% alluvium, but it also had woodland (20%) which, with correction, raises the ridge and furrow to 15%.

### Woodland

Only Foscott, Bucks. had high ridge and furrow and more than 5% wood (but not selected as a priority). The best two in the Gazetteer are Weston Subedge, Gloucs. (17% ridge and furrow (19% corrected), 9% wood) and Owston and Newbold, Leics. (15% ridge and furrow (18% corrected), 10% wood). Passenham has been added from the meadow selection, above.

## 7.5 Low levels of ridge and furrow survival

Lower levels of ridge and furrow survival have not been considered in detail in this regional project but it is essential that significant areas are added to sites that become SMs. The exact area of ridge and furrow is recorded on the 1:25,000 scale maps used for this project.

Many of the MPP settlement sites lie next to ridge and furrow, often where the total survival does not merit a place in the Gazetteer. Such fields should normally be added to any scheduled area that is created, because ridge and furrow provides an important aspect of the setting of the monument and also represents an essential context. There is high potential, shown for example by research in the Raunds Area Project, for Saxon antecedent settlements to extend beyond the medieval earthworks. Most of the MPP sites are abandoned medieval settlements that had early enclosure and so all the ridge and furrow is significant as a sample of 'old', and often genuine, medieval ridges. MPP officers can check that the mapping is correct and that ridge and furrow survives when completing the scoring process.

Moderately large areas of ridge and furrow, not in the Gazetteer, lie in the parks of great houses, as at Elton and Croxton, Cambs. These could be regarded as 'safe' and not under agricultural threat, but this is not always the case. There will also be some protection, or at least knowledge of their importance to owners and planning authorities, via the English Heritage Registered Parks and Gardens Scheme, recently under revision. The owners should be made aware of the importance of the ridge and furrow (and any settlement remains), and planning authorities need to ensure that public car parks or entertainment areas avoid archaeological areas. Often the country house will have good documentation, as at Burghley, Peterborough, which has a field book of 1410 and much other material.

At the bottom of the ridge and furrow survival scale, where there is only a single or a few fields left, it may be possible to alert parish councils and trusts to the historical interest. This has happened at Molesworth, Cambs., where a field within the village envelope with ridge and furrow and earthworks has been purchased as a parish public area. Curatorial advice has been given to ensure that car parks and sports grounds avoid sensitive areas. These sites can often be of great local value.

Left outside of the above classes, are those places not in parks with moderately large areas of ridge and furrow. Some of these should be considered for preservation by record, although fragmented pieces away from villages and without

any other association cannot justify such action. Significant areas that lie in an unusually large block (Stewkley, Bucks.), or next to earthworks could be added as constraints to planning control maps and dealt with, when threatened, by the funding available from PPG16 procedures. It may be possible to move a destructive activity to another site, or take the opportunity to make detailed recording by survey and photography before destruction. This latter has been done for ridge and furrow, dated 1499, at Easton Neston, Northants., by RCHM(E).

## 7.6 Survey requirement

The possibility of an appreciable amount of survey should be considered, since there is likely to be a survey requirement for most of the places listed in the Gazetteer. Few of them will be preserved by scheduling for various reasons. Plans therefore need to be made for extensive recording.

Criteria for survey may need to be established for some sites not in the Gazetteer, that is, those with low amounts of ridge and furrow. They will include such items as the quality and setting of related village earthworks, the quality of associated features (such as an historic park), the quality of documentation (especially the survival of an open field map or fieldbook) and the research potential of the surrounding landscape.

SP 710 820 (CUCAP Zkn HM  
0216, 1999)*

## 7.7 Recommendations for action

- a: The project described in this report has demonstrated that ridge and furrow is now an increasingly rare survival in the East Midlands. Measures to protect what survives are urgently needed.
- b: Preservation needs the support and co-operation of land owners and farmers whose sympathetic management is essential to the future survival of ridge and furrow. Possible measures to be pursued might be through Historic Park registration, National Trust purchase, or Countryside Stewardship, as well as the primary strategy of scheduling. Until any of these methods are in place and become effective as permanent preservation measures, sites are at risk of destruction.
- c: The scope for scheduling areas of ridge and furrow needs to be examined further; notwithstanding the difficulties inherent in such an approach, scheduling currently offers the most certain method of preservation.
- d: Other MPP village sites whose associated field systems may not be in the Gazetteer (which is aimed at the large sites) should have adjacent ridge and furrow included where they have good documentation or there are other considerations, such as the possibility of Saxon remains lying underneath (as explained more fully in the MCD).
- e: The remainder of the 43 townships not scheduled need 'preservation by record', that is, detailed planning and photographic recording. This is necessary because the sites have no protection from agricultural ploughing; PPG16 procedures can be used to pay for recording development sites, but agriculture remains the main threat.
- f: Some sites not in the Gazetteer, or in the MPP settlement lists with low overall ridge and furrow survival, need preservation by record. These will normally be those that have outstanding historical records, including an open field map or fieldbook. Only one of the sites in the Gazetteer is known to have a fieldbook.

**In conclusion, some action is imperative, or ploughing and other destruction will continue and none of the large sites will survive.**

## 8: The priority sites in a national context

### 8.1 National survival of ridge and furrow

The 43 examples of ridge and furrow selected above represent the best survival in the East Midlands, that is, the Central Province Sub-Provinces CEMID and CINMD. In order to assess how these samples relate to national survival and to discover whether there may be any similar large samples of ridge and furrow, a rapid 'desk-top' survey was made.

Figure 10 (page 36) was sent to all the county archaeologists in England seeking information about the approximate level of survival according the following scheme:

- 1: None or little, i.e. 0-4%.**
- 2: A moderate amount, i.e. 5-19%.**
- 3: A substantial amount, i.e. greater than 20% of what was there.**

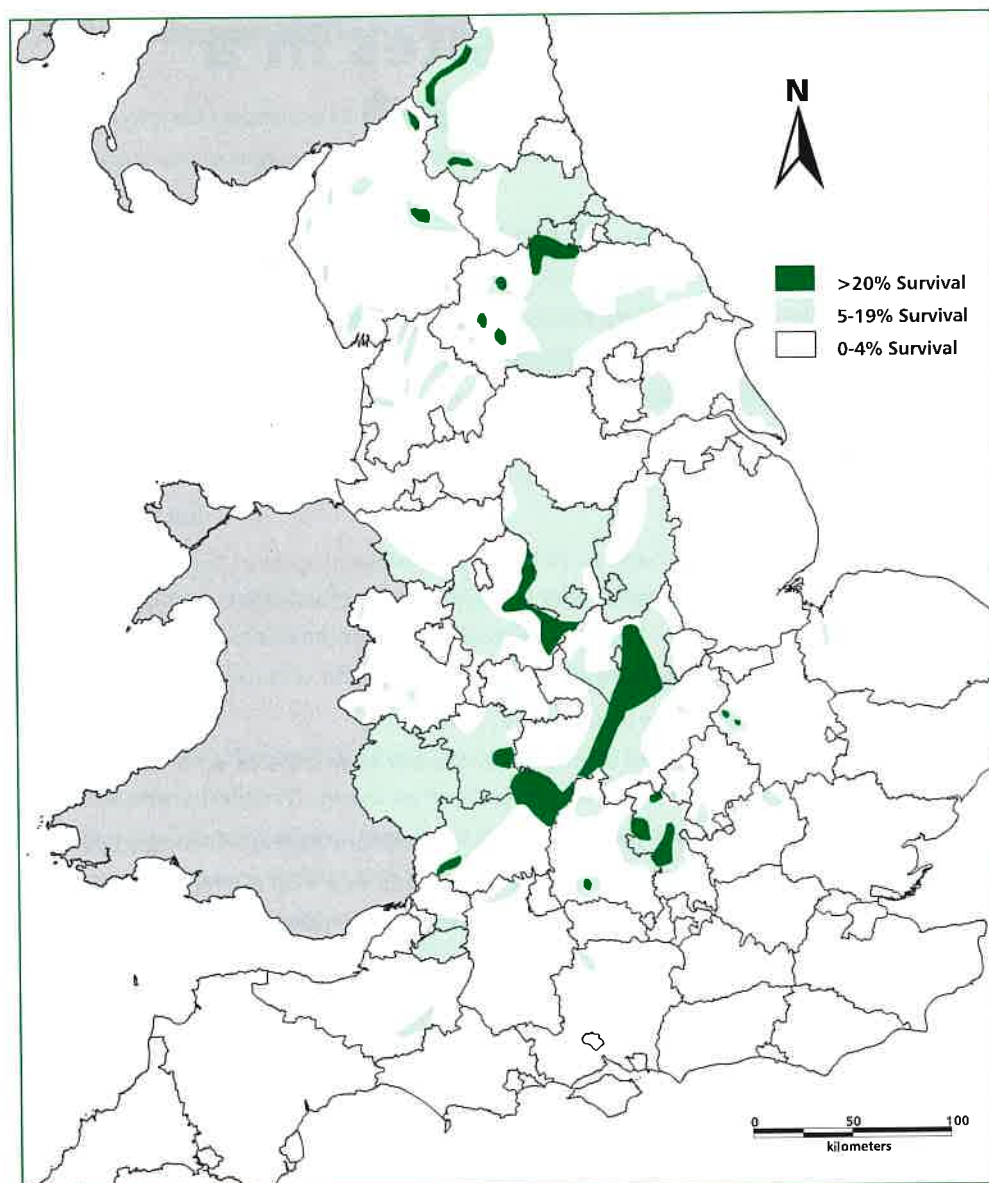

The replies were mostly a subjective view, few counties having much up to date quantitative information. The data probably lie too much on the high side in many cases. Some of the information was gathered over the telephone or was returned in a format differing from the questions asked. All the data have been reduced to paper as best possible, but perhaps introducing further subjectivity.

The results are shown in figure 13 on the next page. No allowance has been made for differences between lowland and upland. For instance, there is an area of high percentage of ridge and furrow survival in some upland areas, but the actual amount in hectares may be much less than in some of the best lowland townships since not more than, say, half the area of an upland township will ever have been ploughed.

Outside of the Midland area already studied, there may be significant amounts of ridge and furrow in parts of Derbyshire, Northumberland and Nottinghamshire, although these have only been indicated as a 'moderate amount' on the national map. These, and smaller pockets of ridge and furrow surviving elsewhere, may be dealt with as adjuncts to the MPP settlement-scheduling programmes. According to figure 13, it seems that the Midland region already studied contains most of the best nationally surviving examples.

### 8.2 Survival of ridge and furrow in the 43 samples in 1999

Before considering which samples might be further studied, it was necessary to confirm that they continued to survive in good condition. In early 1999, a small project was commissioned to take vertical aerial photographs of all 43 townships at the 1:10,000 scale (undertaken by Cambridge University Committee for Aerial

**Figure 13: Survival of ridge and furrow in England, 1998**

Based on data supplied by county SMR officers

Photography - CUCAP). Winter flying ensured that good quality photographs were obtained and the results were plotted at the 1:10,000 scale and digitised.

It was found that three townships (Denchworth and the Shuckburghs) were better preserved than previously thought. Some townships survived unchanged from their previous record, many had loss of ridge and furrow and two of those formerly among the best (Lilbourne and Lower Tysoe) had serious loss. Overall, the total amount of recorded ridge and furrow in the 43 townships fell from 18,879 acres (7,640 ha) in c.1990 to 16,707 (6,761 ha) in 1999. This loss highlights the continued vulnerability of the monument class.

The 1999 values of ridge and furrow area and percentage of survival have been added to the Gazetteer, and the partial MPP scores recalculated accordingly. Township maps show both the c.1990 and 1999 ridge and furrow extent. Tables 2-4 have incorporated the 1999 results and are ordered according to the 1999 values, to provide up to date summary statements.

# Appendix 1:

## Monument Class Description for Midland ridge and furrow

### 1: Introduction

This Appendix summarises previous work used and undertaken for the main report and to develop a Monument Class Description for Midland open fields.

As explained in the introduction to the text above, Northamptonshire Heritage commissioned a report in 1993 that highlighted destruction rates in Northamptonshire. The physical remains and documentary sources available for the study of open fields were described, and the significance of open fields as a monument class was discussed along with the 1993 state of survival. It was found that in 1990 there was only about 12% of the ridge and furrow that had survived in 1940. Criteria for sample selection were discussed and lists of sites given, based on rapid assessment and professional judgement, of those parts of the county where the best examples of ridge and furrow with good historical records and research potential were preserved. Recommendations were given for recording field systems and a summary of the action required for Northamptonshire and elsewhere was presented (Hall 1993).

Following the Northamptonshire Heritage report, English Heritage commissioned an MPP pilot study of Northamptonshire. The study determined parameters suitable for MPP monument classification in the Midland part of the Central Province. Methodologies were developed and the parameters useful for classification were established. A Monument Class Description for Midland open fields was prepared as a result of this study. A summary of the report and the Monument Class Description (MCD) are given below.

### 2: Chief characteristics of Midland open fields

#### Arable

The wide open expanse of arable was subdivided into many small, narrow strips called **lands**, that were grouped into blocks called **furlongs**. The furlongs were grouped into a few large areas called **fields**, which were open and hedgeless. The fields occupied most of the available area and were often cultivated in a two- or three-year rotation, one year being fallow. There were common grazing rights over the fallow at certain times. In the Middle Ages a farm, called a **yardland**, consisted of about 25 acres (10 ha) of land (but the amount varied greatly from village to village), lying not in a block, but scattered in strips throughout the township, no two strips lying together.

*Schematic plan of parts of two furlongs*

*A headland, Castle Ashby, Northamptonshire, SP 869 604, March 1970*

Individual strips were probably first marked out as a quarter or half an acre, but later often had average dimensions of about 7m by 180m, which is near to a third of an acre. Lands became ridged by the ploughing technique of going around in a clockwise motion, beginning at the middle and finishing at the outside leaving a furrow. An anti-clockwise motion was adopted in the fallow season to take some of the soil back and maintain a low ridge. The purpose of ridging was for soil drainage; the furrow acted as an open drain and also as an ownership demarcation between lands.

The ends of most lands are curved, so that the whole land took the shape of a very elongated, mirror-image of an 'S'. This seems to have developed over the years, resulting from a tendency to draw out to the left when performing a turning circle to the right (Eyre 1955).

### Meadow, pasture and woodland

Although the arable lands of the open fields were the most dominant part of the system, meadow and pasture were economically important too. Meadow, like the arable, was owned in narrow strips and was used for common grazing; part was marked out into strips with stakes and cut for hay before being used for common grazing. Meadow strips are not visible on the ground because they were unploughed and no ridges or furrows developed to leave a physical record. Subsections of the meadows were subdivided by stone markers.

Pasture was unploughable grassy ground lying by the side of springs and small upland valleys and on steep slopes. It also included woodland pasture, unploughed grounds lying next to and among medieval forests. After the 14th century, pasture included leys (arable lands grassed down) and larger pieces of arable converted to common, the cow pastures.

Woodland was a limited resource in many parts of the Midlands, but was often part of the overall economy of those townships where it occurred, and some of it was subject to common grazing rights as well as being used for woodland products. There are townships that had woodland adjacent, those that shared wood, and those that had their own wood lying detached at some distance. Nearly all townships located near to medieval woods had tongues of land reaching to them so as to obtain a share of the resources.

### The physical remains

Regular ploughing of strips in a repetitive manner gave rise to characteristic groups of ridged lands, the furlongs. The pattern of furlongs varies. On gentle slopes furlongs can be well over a kilometre long, made up of hundreds of lands lying side by side. In contrast, high undulating ground can have very complex patterns of small furlongs, with lands orientated in many directions. Lands became visibly ridged by the 13th century and the height of the ridges increased with time, lands ploughed until the 18th and 19th centuries having the most pronounced profiles. It seems from the comments of contemporary authors (Plot 1705, 244-5), that it was fashionable to plough lands into high ridges to create a well-drained seed bed. The steepness has nothing to do with any technical developments of ploughs.

As well as moving soil towards the centre of the land, ploughing moved some earth in the direction of motion, towards the ends. It was left when the plough was lifted to turn, and over the years small soil heaps accumulated at each end, lying on the left-hand side as viewed from the centre. They were called **heads** and were first noted in records of the 13th century. Where two furlongs had lands meeting at right angles the heads of all the lands in one furlong were piled on the first land of the next. The heads were ploughed over and smoothed becoming part of the first land, which was called the **headland**. Headlands are larger than the adjacent lands because of the extra soil moved

*A joint, Great Houghton, Northamptonshire, SP 793 595, 1985*

*A balk (the narrow strip in centre of photograph), Wollaston, Northamptonshire, SP 901 633, January 1970*

onto them. Where two furlongs have lands lying in the same orientation, the boundary is marked by a double row of heads, forming an irregular 'knuckle-like' bank. This, too, lies higher than the tops of the nearby ridges because of soil transfer; the boundary was properly called a **joint**, but the term headland was also used.

Narrow strips of grass, sometimes used as access routes, were called **balks** and were formed by ploughing a few furrows away from a particular land, leaving them to grass over. Balks are commonly recorded during the 15th century and later, but there are occasional references to them in field orders of the 14th century (Hall 1995, 23-6). They were used to mark out particularly significant groups of lands, such as blocks of demesne (the manorial home farm), or major subdivisions of the fields.

From the 15th century, arable was converted to grass in various ways. In some cases parts of furlongs, or even whole furlongs, were set down, and called **leys**. Leys are not always immediately obvious in a modern field, because all the grassed strips are technically 'leys'. Provided a sufficiently large area survives, it is possible to identify leys as blocks of ridges of lower profile than the rest, because ploughing ceased before the most of the township was enclosed.

By the 17th century many places introduced balks between every land, the width of the balk being proportional to the width of the land. This type of balk was referred to as **greensward** or green furrows. Another late introduction of grass was by foreshortening lengths of arable lands against a headland or joint. Instead of ploughing the full length of a land, several metres were left at the end, which would rapidly grass over. Many references to **grass ends** can be found in court orders from the 16th century. When all the headlands and joints were treated in this manner, the net result was that every furlong became surrounded by a band of grass.

Small grass areas called **rick places** occurred in some open fields. They were used as platforms for stacks or ricks, and were formed at the end of a group of lands by flattening the ridges. The original course of the furrows may be discernible within the square. At the edge away from the furlong boundary the foreshortened lands developed new heads.

*Grass ends (humps in centre of photograph), Ashby St Ledgers, Northamptonshire, SP 564 682, January 1979*

*A rick place (in centre of photograph), Brixworth, Northamptonshire, SP 741 689, April 1974*

*Green furrows, Crimscoe, Warwickshire (from Orwin and Orwin 1938, plate 11)*

### 3: Monument Characterisation and Monument Class Description

#### 3.1 Characterisation criteria

Each Single Monument Class is scored on four criteria which are designed to help define its importance in terms of its contribution to an understanding of the country's history (Class Importance Value, CIV). The CIV takes account of the field structure and the regional variation of field systems as well as their physical attributes. The criteria and scores for the physical characteristics of Midland dispersed fields are as follows:

**Period (currency): Long-lived.** Midland fields are believed to originate at the end of the Middle Saxon period, say in the 9th century. They continued in many areas well into the 19th century. Since the fields were continuously used and modified none of them can be said to date from the late Saxon period. Nevertheless, the fields as a whole have a great antiquity and furlongs did not change much in general layout after the 12th century. It is believed that furlongs were created by subdividing a simple system of long strips. This will now only be apparent where large blocks of furlongs lie in an axial alignment. Enclosure and removal of lands from the arable system has preserved examples of all dates from the 13th century.

**Rarity: Fairly common but threatened.** Fields are now a diminishing monument type. Although abundant in 1940, with many Midland townships having more than 60% of undisturbed fields surviving as pasture ridge and furrow within enclosed landscapes, there has been much destruction, especially by ploughing during 1965-75. Many parts of the region had only a single field left in 1995, but some have significantly more.

Enclosure of a particular township preserved fields in the form then in operation. Substantial examples of fields enclosed in the 15th century are rare; there were not many Midland enclosures of that date and there has been a long time for later agricultural techniques to obliterate ridges. Later enclosures are more common, the most frequent being those of the 18th century.

**Diversity (form): High.** Physical diversities occur in several ways. Regions with undulating topography have small furlongs and lands change direction frequently to maintain natural drainage across the contours. In flatter landscapes, furlongs are large and lie with lands lying in the same orientation.

From the 15th century, there are features left by modifying the open field economy to encompass more grass: leys, cow pasture, grass ends, green furrows and balks. Superimposed upon these overall variations are features preserved when an example was enclosed: hedges, ditches, ponds etc.

**Period (representativity): Moderate to good.** Enclosure has preserved examples of whole townships as they were from the 15th to 19th centuries. Smaller areas of 12th to 14th century open field were preserved by smaller scale enclosures, made for parks or demesnes.

Assigning numerical values (squared) to the preceding four items, a CIV of 43 results, being near two-thirds of the maximum score (64). This high value illustrates the importance and longevity of fields as a monument class.

### 3.2 Sources of information

Information sources vary from county to county. Some SMRs are fairly complete with ridge and furrow sketch-plotted from vertical APs taken during the 1940s and later. Most SMRs have access to APs even if little quantitative data have been plotted. None has a full record of what survives in a whole county at any particular date. For the East Midland counties of the Central Province described in this report, the digitised database provides a plot of ridge and furrow extant in c.1990 (section 4.5).

Most township boundaries are recorded on the Ordnance Survey First Edition 1:10560 scale maps (1880s) and were used to prepare county township maps by the English Place-Name Society (often called 'parishes'). Tithe apportionments, made in the 1840s and 1850s, were often processed by the township and hence the accompanying maps provide boundary information (Kain and Oliver 1995). Further information of township boundaries is available from Humphrey-Smith (1984). County Record Offices hold information on enclosure dates but there may be difficulties with pre-Parliamentary enclosures. Parliamentary enclosure dates can be obtained from Tate and Turner (1978).

A range of historical information survives relating to the operation and ownership of the fields (more detail is given in Hall 1985, 1-7). In summary, the most useful are complete surveys of a township describing every field, furlong strip by strip, called a field book. Other types of records, such as charters and deeds, describe individual farms (yardlands) or smaller dispersed holdings within a township. The description is called a terrier and usually refers to every land, naming the furlongs and fields.

For Midland counties, where enclosure was late, descriptions of glebe, the land given to the church of each parish, is a particularly useful source. Most parishes had glebe land and nearly all have a series of terriers made from the early 17th century until 1851.

For parishes without glebe, or where glebe terriers are uninformative, other sources have to be sought. County Record Office place-name indexes will give references to deeds of sale (5% of which are likely to have a terrier) and hold detailed lists and calendars of family collections. These can be used to select documents likely to provide field information. Data for the Middle Ages are frequently found in charters and monastic cartularies.

Contemporary open field maps are an important source of open field data, but their coverage is far from complete. However, when only the great field numbers are required, enclosure maps are also useful, since many of them indicate the boundaries and names of the great open fields at the time of their obliteration.

### 3.3 Monument Class Description

#### Discrimination criteria

Each example of a field requires evaluation to distinguish sites of national importance from those of regional or local importance only. The discrimination criteria determine Monument Importance Value (MIV). The MIV of open fields is primarily determined by physical attributes, although selection of a sample will be followed by structural and land-use matters. The discrimination criteria are as follows:

#### Group Value (Association)

The importance of a field system is enhanced by association with archaeological features (including other Monuments) which lie within the township. The group value derives from diachronic relationships with nearby monuments. Thus fields may be seen to post-date a prehistoric ringwork, to overlie cropmarks of a Roman town, or to predate a windmill mound that was constructed over them.

By far the most important related monuments are the earthworks of all or part of the parent settlement of the field system. When fields and earthworks lie together, highly significant physical relationships can be seen between them. The ridges abut and interlock with the banks of individual house plots or the larger boundary ditches of a manor-house. A settlement often encroached on its open fields by means of enclosures. Enclosures can survive as hedges or hedge banks surrounding ridge and furrow of lower profile than that used until total enclosure. A variety of other related features may be present. Roads and access routes to the fields can sometimes be seen as hollow ways, or there may be a quarry or the mound of a windmill, located in an exposed position. Occasionally there may be an isolated church shared between two settlements and surrounded by ridge and furrow.

A sample of ridge and furrow lying away from the settlement will also be enhanced by the presence of any of the above items. Two or more well preserved townships in proximity will also have group value. The range of scores is:

1. **Low:** with a single monument or feature (excluding the settlement), or none at all.
2. **Medium:** two or three associated features, (excluding the settlement).
3. **High:** settlement earthworks and any other feature associated with the fields.

#### Survival

The extent of a field system is a major part of its importance. A single modern field with ridge and furrow is normally of limited significance unless there are particularly rare features, or unless it lies next to a settlement.

Ideally a whole township is required so that all details can be studied. The average size of a Northamptonshire township is 550 ha, but many are smaller (down to 100 ha), the average being high because there are many 1200 ha townships. No single whole township of intact fields survives. The range of scores is:

1. **Poor:** field systems extending to less than 0-10% of the township and/or having some post-enclosure plough damage.
2. **Medium:** field systems extending to 11-18% and/or having some post-enclosure plough damage.
3. **Good:** field systems extending to more than 18% of the township with no later plough damage.

The surviving ridge and furrow should be expressed as a percentage of the original field system rather than that of the township. For those townships with significant amounts of wood, meadow, fen or heath, corrections may be necessary.

## Potential

The potential of surviving ridge and furrow normally lies with its extent, physical detail, historical documentation and relationship to the settlement as outlined above.

The condition of ridge and furrow should be very high, i.e. it has never been ploughed since it ceased to be part of an open field system, normally when it was enclosed. Ridge and furrow that has been ploughed just once or twice may still be considered worthy of preservation, especially where it forms part of a large extent of undisturbed fields and so completes the visual pattern. A single ploughing would usually leave the main features, primarily the ridges and furlong boundaries, still plainly visible.

In order to assess ridge and furrow condition, it is essential to view it when grazed low. This enables distinction to be made between ridges that have slight ploughing-reduced profile from those that have low-profile because they are very old. It is also necessary to eliminate post-enclosure ridges, both wide and narrow, that have no relevance to the open fields, being merely a later agricultural technique.

There may be hidden potential in that field systems overlie earlier Saxon antecedents of the settlement. Such sites will not normally be identifiable, but known sites are often on the edge of a medieval settlement, or on light soil near to a water supply. Fields in such locations have enhanced potential. There is also archaeological potential provided by the proximity of ponds or marshy places where waterlogged remains may preserve environmental evidence about the crops grown etc. Similar evidence is preserved in soils buried beneath the turf of the ridges.

The creation of Midland checker-board furlong patterns from early long strips by subdivision, and in some cases re-ploughing at right angles, can be tested. Excavation would determine whether furrows continue under joints or lie under some furlongs at right angles to the furrows apparent on the surface. Where several furlongs have ridges lying in a similar orientation, the precise alignment of the lands can be measured. There is also potential for sites of any age preserved under ridge and furrow, for although furrows will have cut into occupation levels, the shallow soil under the ridges will preserve archaeological levels much better than a modern ploughed field.

A township with significant amounts of urban area or quarrying has less potential than an unspoilt rural one: in undisturbed townships there is potential for reconstructing the furlong pattern for those areas under modern ploughing. The scores are:

1. **Low:** divorced from wet features and not lying on light soil. Has a significant proportion of urbanisation and quarrying.
2. **Medium:** lies on light soil or has wet features adjacent; remainder of the township is intact.
3. **High:** lies next to settlement earthworks, preferably with nearby wet features and light soil and the remainder of the township intact.

## Documentation (archaeological)

The most important elements of archaeological documentation are aerial photographs, both vertical and oblique, and plans. If there are old photographs, then it is possible to relate the surviving amount to the earlier extent.

Photographs, taken under good light conditions (preferably on a winter's day with low, bright sunlight), should show fine detail and be good enough to allow features to be plotted. Photographs are important because they often record ridge and furrow in old enclosures that are not mapped on post-medieval estate maps.

Plans should, as a minimum, be sketch-plots of furlong boundaries at the 1:10,000 scale

*Grendon, Northamptonshire,  
SP 875 604, February 1988*

with the direction and curvature of the strips marked. Ideally all fields should have large scale plans (1:2,500 or larger) showing details of furrow curvature, balks etc, accompanied by levelled profiles. The range of scores is:

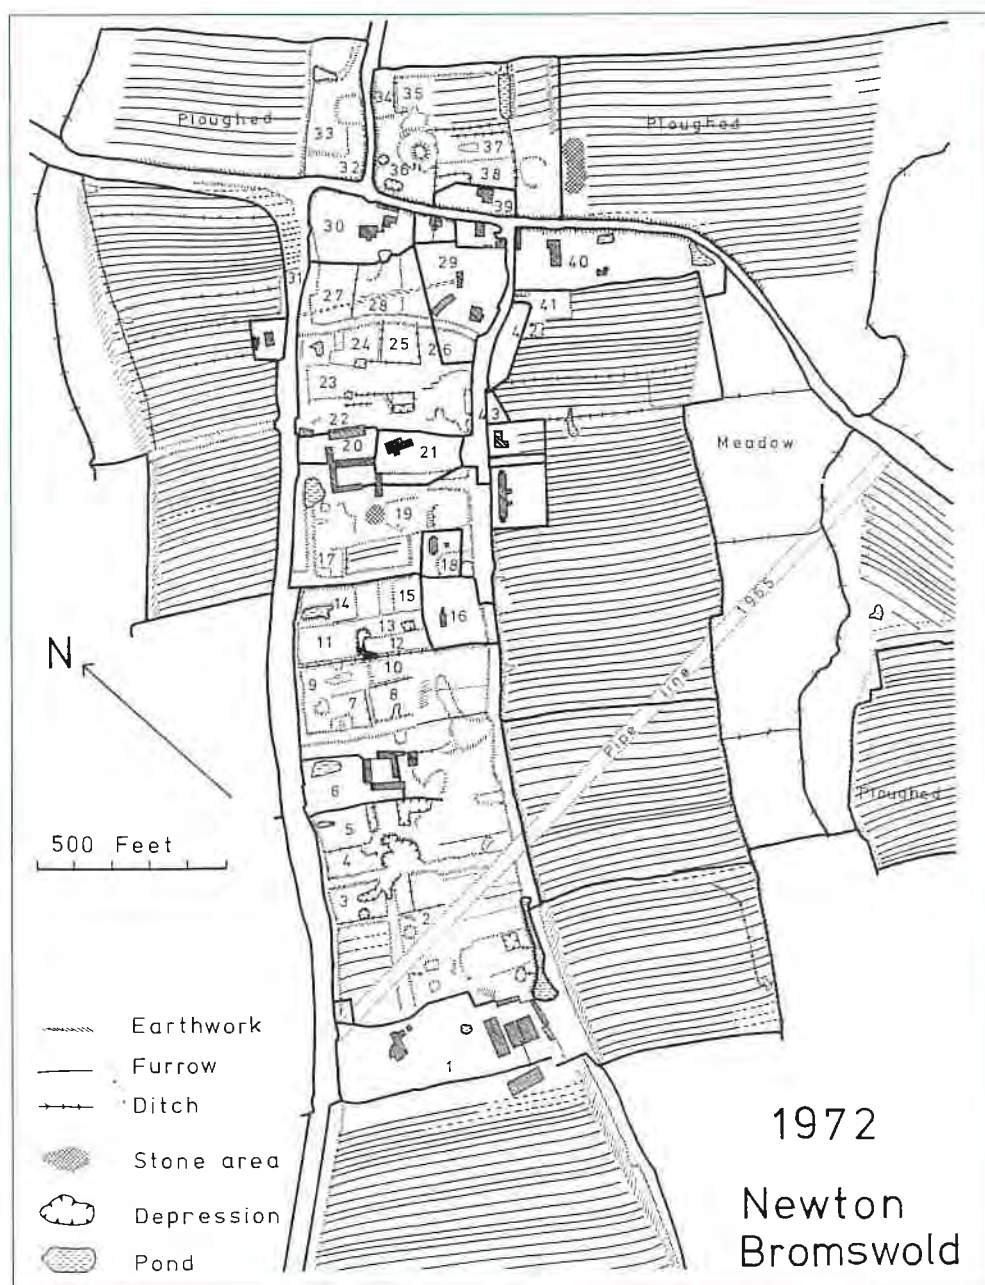

1. **Low:** no plans or only poor photographs.
2. **Medium:** good photographs, or adequate plans.
3. **High:** good photographs and plans with profiles.

## Documentation (historical)

There are various records that describe open field land in sufficient detail to provide information about the fields and the township structure. Contemporary maps are one of the most important sources, although they are not common. Almost equally useful are complete written surveys of a township describing every field and furlong strip by strip, called a field book. The range of scores is:

1. **Low:** no open field records other than a late terrier
2. **Medium:** map or terrier plus any of the other items next listed
3. **High:** map with field book, terriers, court rolls, accounts, estate records and medieval information

*Plan of Newton Bromswold village earthworks, SP 997 657*

### Diversity (features)

The features of a field system have been described above. The items are: furlongs of different sizes and orientations, headlands, joints, balks, grass ends, green furrows, rick places and variable ridge profiles. The range of scores is:

- 1. **Low:** examples with 0-2 of the features
- 2. **Medium:** examples with 3-4 features
- 3. **High:** over 4 features

### Amenity value

Field systems have an immediate and exceptional appeal to the visitor and so have a good amenity value, often enhanced by other features not directly related to the fields, such as old hedges and trees, that have additional visual and botanical interest. The range of scores is:

- 1. **Low:** an inaccessible and small area of fields
- 2. **Medium:** some access is available; or the fields are enhanced by the additional interest of later features
- 3. **High:** good access to extensive clear samples of fields with additional interest

## 3.4 Professional judgement

The scores achieved by the MIV process will need to be set in a framework that makes allowance for regional variation, chronology, influence of settlement type and any other special cases.

There is a regional variation in the profile of ridges. The MIV score for low-profile ridging on the south-eastern fringes should be balanced against scores for the centre, where ridging tends to be higher, even when comparing examples of similar date.

The age of samples should be considered carefully. While this will still be unknown for early examples, their antiquity will generally be apparent from the low profile of the ridges and the absence of the earthworks of grass ends, which are not recorded before 1570. The scoring system above would lead to low values for low-profile ridging and for the absence of the late features described in the section on Diversity. The MIV needs to be considerably upgraded for chronology and rarity. Old examples can be expected in ancient enclosures next to village earthworks and in parks.

Ridge and furrow associated with dispersed settlement is potentially interesting. It is not likely that there will be any visible physical differences from that associated with nucleated settlement, although the pilot study showed that multiple great fields was a characteristic. Again, this will not necessarily be known. Information as to which townships contain dispersed settlement will have to be obtained from the SMR. There will not be many examples in some parts of the Central Province.

The actual area of surviving ridge and furrow needs to be balanced with the percentage value. A small percentage of a large township may be more important than a high percentage of a small township. Generally, a large area is preferred.

The context of the field sample should be allowed for. A small area of fields in a region that has other large areas may not be important. However, in a region with limited survival, a small area may be significant.

The pilot study showed that within a township there was nearly always a single settlement. Although townships vary in size, it seems to have no effect on the field types.

Only a few examples of multiple settlement occur within one township, some of which have very complex fields. Examples of field systems for further study or preservation should therefore be selected according to the available terrain of woodland, meadow and fen, and heathland.

### 3.5 Management Assessment

The final stage of assessment is to consider how sites suggested for preservation are to be managed. This needs to take into account **Condition, Fragility, Vulnerability** and **Conservation Value**.

The condition of field systems should be that they have no modern or very little ploughing since they were abandoned and that they continue under permanent pasture. They are very fragile since one ploughing could remove a significant part of their interest. They are vulnerable because of outside influences, such as the European Union agricultural policy, and often they are adjacent to modern settlements and farm buildings with consequent development threats. They are vulnerable from changes of ownership, when they may be incorporated into large all-arable farms. The conservation value is enhanced by association with other monuments, especially the vill, and with later features such as enclosure hedges or hedgebanks and parks. Conservation value is also increased where flora and fauna are diverse or the site has other ecological value.

The practicalities of management will depend on the area involved and the numbers of owners.

*Braunston, Northamptonshire.  
SP 532 660 (CUCAP Zkn HN  
0175, 1999)*

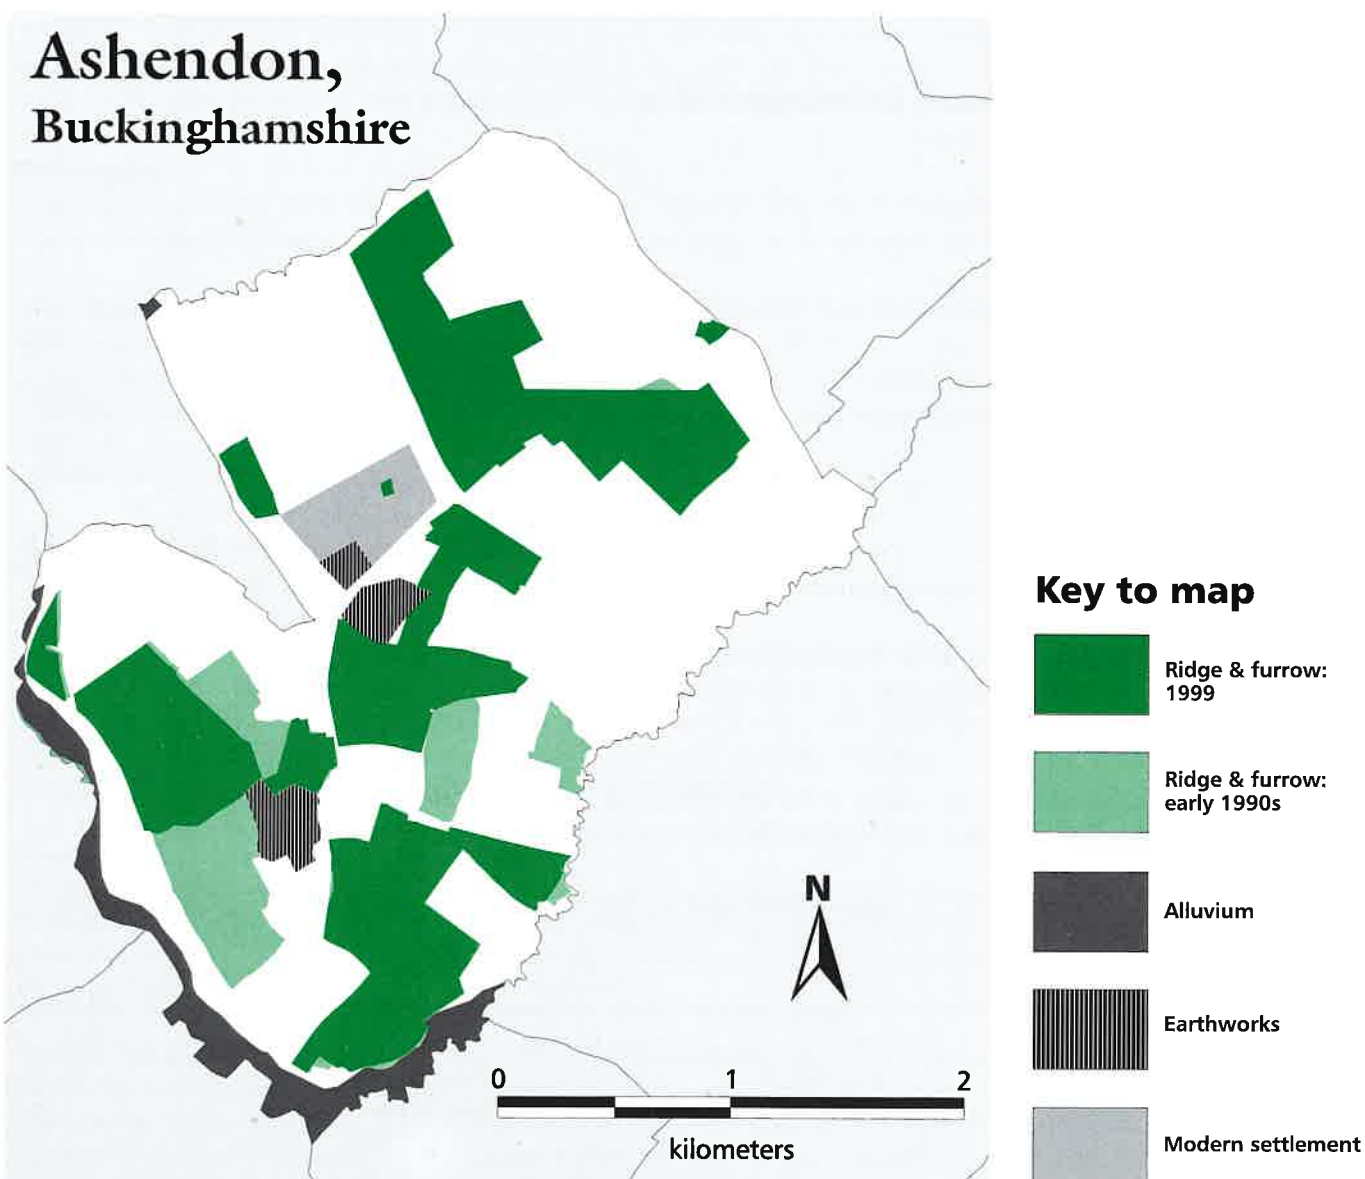

## Appendix 2: Gazetteer

The gazetteer is arranged in parish or township alphabetical order. Maps are included in the online version: [www.northamptonshire.gov.uk/goto/openfields](http://www.northamptonshire.gov.uk/goto/openfields). The map for Ashendon in Buckinghamshire is shown below, as an example. Original documentary references are at the respective county record office unless stated otherwise. Each entry is in the following format:

- Place-name, with county and national grid reference
- Total survival of ridge and furrow (percentage and acres as in c.1990)
- Total survival of ridge and furrow (1999)
- Name of MPP medieval settlement site (if any); Parliamentary enclosure date

A short text outlines the quality of the ridge and furrow and historical documentation. A partial MPP discrimination scoring is placed at the end. The criteria, seven in all, are **Group Value (association), Survival, Potential, Documentation (archaeological), Documentation (historical), Diversity, and Amenity**. The last two have not been assessed, as they require a site visit for evaluation. The first five items are scored on a three-point system, each score being squared before adding up; the maximum is therefore 45.

**1: Ashendon, Buckinghamshire**

SP 705 130

31% (52%) 657a      1738 (Pollicott 1634)  
 1999: 40% 378a (Pollicott)

The parish contains two townships, Ashendon and Pollicott. A few earthworks lie N of Ashendon (SMR 2245). The main monument is Pollicott shrunken village (SMR 1027). Most of the R&F at the S is associated with Pollicott and since it was a separate township the percentage survival is 52% and the area 492 acres.

**Documents:**

**Ashendon** Maps: a 1641 open-field map of Ashendon township shows furlongs (not strips) grouped into three fields (Buckinghamshire Estate Maps, Bucks. Rec. Soc. 1964 no. 9). It marks the boundary with Pollicott. 1739 estate map BAS 103/47. Manor Farm deeds of 4 yardlands, D104/4 (1689-1730).

**Pollicott** Manors of Great & Little Pollicott 1624, BAS 98/48 and BAS 99/47 (then mainly open; enclosure in 1624, BAS 4/59). 1837 map, BAS 100/47 and tithe (1837) MaR/6/2.T. Lincoln College, Oxford, ownership; court papers, correspondence and manorial D104/2-4, 76 (1609-1754). Glebe D/A/GT 1/5 (1639).

**Overall comment:** documents good, MPP vill, high percentage survival.

MPP discrimination score (Pollicott)

Group Value (association) 3	Survival 3	Potential 3
Documentation (archaeological) 2	Documentation (historical) 3	<b>Total score: 40</b>

**2: Belton in Rutland, Leicestershire**

SK 819 018

36% 367a      1794  
 1999: 35 356a

R&F lies on all sides next to the vill, but there are no surviving earthworks. Lies in small local region CEMID 2c.

**Documents:** Maps: c.1850, DE 2158/16. Deeds 1735-58, DE1022. Rentals 1768-1824, DG7/1/14, 74. Survey of fields 1786, DG7/1/79, 95.

**Overall comment:** documents fair, no earthworks, moderate amount of R&F.

MPP discrimination score:

Group Value (association) 2	Survival 3	Potential 3
Documentation (archaeological) 2	Documentation (historical) 2	<b>Total score: 30</b>

**3: Braunston, Northamptonshire**

SP 532 660

33% 1071a      MPP Braunstonbury      1775  
 1999: 27% 867a

The R&F is associated with the deserted village of Falcliffe, the grange site of Braunstonbury (SM), a block demesne and abandoned canal. There is group value with Wolframcote deserted village in Warwickshire.

**Documents:** Maps: 1842 tithe, T294 for demesne (described in 1581, D1094). Glebe terriers from 1633; deeds & field orders in Warwick RO, (1491 and later).

**Overall comment:** documents fair-good, very good deserted village earthworks, fair R&F at west, remainder fragmented.

MPP discrimination score:

Group Value (association) 3	Survival 3	Potential 3
Documentation (archaeological) 2	Documentation (historical) 2	<b>Total score: 35</b>

**4: Braunston in Rutland, Leicestershire**

SK 835 070

34% 534a

1801

1999: 35% 560a

A large block of R&F lies next to the vill on the N with some on the W & S; village earthworks lie on the SW. The northern R&F block is 120 ha (330a).

**Documents:**

Maps: enclosure 1807, EN/MA/R8/1. Glebe MF 494 (1727-98). DE2429, Noel family papers 1617-1858. Deeds 1726-1888, DE783/14. Deeds 1778, DE201.

**Overall comment:** Documents fair, not much R&F next to the vill.

MPP discrimination score

Group Value (association) 3

Survival 3

Potential 3

Documentation (archaeological) 2

Documentation (historical) 2

**Total score: 35**

**5: Bythorn, Cambridgeshire**

TL 058 755

10%, (24%) 350a

1845

1999: 20% 242a (Bythorn)

The modern civil parish of Bythorn and Keyston has nearly all its R&F in Bythorn township which is about one third of the total area. The R&F survival is therefore 24% (285 acres), and within the regional level under consideration. It is visual on a slope with a wide drove to the south. Some R&F lies next to the vill where there are good earthworks.

**Documents:**

Maps: open field 1839, Hunts RO, 2196/6. Enclosure map HRO, PM 1/15. Medieval charters, court rolls, surveys (Ramsey Abbey) and later surveys and deeds.

**Overall comment:** Documents excellent, R&F and earthworks fair, but R&F spoilt by the A14 cutting through.

**Total score: 32**

**10: Denchworth, Oxfordshire**

SU 380 925

31% (39%) 321a 1801  
 1999: 53% 428a (Denchworth and Hyde)

A large area of R&F lies next to the village and stretches to the separate township of Hyde to the N, now Hyde Farm, and a moat (PRN 2614). At Denchworth a manor complex lies on the E (PRN 9610). To the S lies the separate township of Southcote, now 'Circourt'. This is the only good example of R&F surviving in south Oxfordshire. Since almost none of it lies in Circourt, the percentage of survival in Denchworth and Hyde is 39 (306 acres).

Denchworth was formerly called South Denchworth, Little or North Denchworth was a detached part of East Hanney parish, now in West Hanney (and so added to the plan). North Denchworth would appear an alternative name for Hyde and may be split between present day (South) Denchworth and West Hanney. More documents will be at Berks. Record Office and in the muniments of Magdalen and Worcester Colleges, Oxford.

#### Documents:

Maps; enclosure c.1803, Photo 143 (original at Berks R.O., D/P 46/26). The map shows the two enclosed townships, marked by old enclosure, as well as Denchworth. Glebe; terrier 1634, MS Archd Papers Berks c.185.f70.

The SMR has a plot of historic R&F from 1961 APs. The layout suggests there was originally a large-scale planned field system.

**Overall comment:** Good documents likely, small site.

## 25: Owston and Newbold, Leicestershire

SK 777 075

15% (17%) 459a

MPP Newbold Saucey

Non-Parliamentary

1999: 17% 342a (Owston)

The parish contains the deserted villages of Marefield (now a separate civil parish) and Newbold Saucey that have very little R&F in association; any relevant R&F should be included in the MPP scheduled areas. Nearly all the R&F lies at Owston vill mainly at the S & E. There are earthworks (SMR 70NE AA, L & Q), the last two being SMs, one a moat lying E of the vill. The large block of R&F should be added to the SMs. Good APs in SMR.

The corrected percentage of R&F survival for Owston is 17% (342 acres), allowing for the wood. It is the only township in the region with near 18% R&F that has woodland (Owston Wood), being 10% for the civil parish.

### Documents:

Maps; Palmer estate 1795, DG4/606. Former monastic site. Deeds 1582-1759, DE27/1-7. Deeds 1707-1820, DE593. Surveys 1786, 1796, DG7/1/78-90L.

**Overall comment:** mainly important for its high R&F percentage and woodland association.

**37: Tysoe, Warwickshire**

SP 340 460

27% (70%) 1,292a MPP Westcote 1796  
1999: 52% 486a

The large parish, 4,785 acres, presumably comprises several townships and contains the five vills of Upper, Middle and Lower Tysoe and the deserted villages of Westcote and Kites Hardwick.

Westcote deserted village, SP 366 469, NE of Lower Tysoe (SMR WA 2060, with sketch plan), is on the 1490 list of deserted sites prepared by Rous. There is associated R&F on the scarp next to Radway; group value with Radway.

Kites Hardwick deserted village lies at SP 342 475 (SMR WA 2067), but has no adjacent R&F.

A very large area of R&F lies to the N of Lower Tysoe, 200 ha (500a) centred SP 340 460. There are some associated earthworks on the N and W of the vill (SMR 2076, and from APs). Possible earthworks lie detached at SP 335 456 (SMR WA 2086). This is one of the largest blocks of R&F in the whole region and comprises the greater part of Lower Tysoe township. The northern township boundary has been identified by Della Hooke. The corrected surviving R&F for Lower Tysoe township will be 70% (648 acres), making it easily the best preserved place in all the Midlands.

**Documents:**

Maps (Lower Tysoe): enclosure award and plan 1798, QS 75/121 (or CR 504). Estate 1774, Z202 & Z275; 1819, Z86.

Wescott 1769, Z142; 1778 Willoughby de Brooke MSS map 9. Glebe: 1585-1714m DR72 119-121. Court roll 1479-1483, M1 283. Deeds at Magdalen College, Oxford, 12 - 15th. CR 2778. Deeds CR 1620. Terrier, 18th, CR 1960. Large collection of Compton estate records (at Castle Ashby, Northants.).

**Overall comment:** documents likely to be very good, few earthworks, very large area of compact R&F.

# *All cut up and done*

The gently curving darksom bawks  
That stript the Cornfields o'er  
And prov'd the Shepherds daily walks  
Now prove his walks no more  
The plough has had them under hand  
And over turn'd 'em all  
And now along the elting Land  
Poor swains are forc'd to maul

And where yon furlong meets the lawn  
To Ploughmen Oh! how sweet  
When they had their long furrow drawn  
Its Eddings to their feet  
To rest 'em while they clan'd their  
plough  
And light their Loaded Shoe  
But ah - there's ne'er an Edding now  
For neither them nor you

The bawks and Eddings are no more  
The pastures too are gone  
The greens the Meadows and the moors  
Are all cut up and done ....

*John Clare*

In 1818, when John Clare wrote these lines, with their evocative description of the open field, ridge and furrow agricultural landscape of his youth, he was commenting on the social effects of enclosure. In particular, he lamented the loss to the plough of headlands and the grassed strips of the bawks, and worried that all ridge and furrow would vanish.

From our vantage point almost two centuries later, we can see that this did not happen, and much ridge and furrow survived to become a characteristic feature of the 20th century English Midland landscape.

We now live again, however, towards the end of a renewed period of major rural change, and now the surviving examples of Clare's curving bawks, eddings, furlongs and lawns are disappearing year by year.

This process of change is the background to this report by David Hall which has been jointly published by English Heritage and Northamptonshire Heritage on behalf of nine county archaeological services in the English Midlands.

# Northamptonshire County Monument Full Report

14/06/2022

Number of records: 21

HER Number	Site Name	Record Type
9 - MNN209	Open Field System, Warkworth	Monument

## Monument Types and Dates

FIELD SYSTEM (Medieval to Modern - 1066 AD? to 1764 AD)

OPEN FIELD (Medieval to Modern - 1066 AD? to 1764 AD)

## Description and Sources

### Description

{1} The common fields of Warkworth were enclosed by an Act of Parliament of 1764 but nothing is known of the arrangement of these fields except that Warkworth had its own field system separate from those of Overthorpe, Nethercote, Huscote and Grimsbury.

The ridge and furrow which survives on the ground or can be traced on air photos within the present parish is probably associated with the Warkworth common fields. None survives on the higher areas of the parish covered by Marlstone Rock but on the lower clay land large areas of end-on and interlocked forlongs are still visible. To the south west of the village (SP482402) ridge and furrow running down into a shallow valley appears once to have extended further down the slope, but the furlongs have been shortened, leaving short lengths of worn-down ridges beyond the later headland.

HER Number	Site Name	Record Type
6415 - MNN2436	Open Field System, Middleton Cheney	Monument

### **Monument Types and Dates**

FIELD SYSTEM? (Medieval to Modern - 1066 AD? to 1769 AD)

OPEN FIELD (Medieval to Modern - 1066 AD? to 1769 AD)

### **Description and Sources**

#### **Description**

{1} The common fields of Middleton Cheney were enclosed by Act of Parliament of 1769. On the Enclosure Map of about 1770 most of the land attributable to the village is shown as being under common fields. The furlongs and accessways depicted on it agree exactly with the ridge and furrow which still exists or can be traced on air photos. (The separate common fields of Overthorpe, were enclosed together with Warkworth.)

Large areas of ridge and furrow can be recovered, arranged in end-on and interlocked furlongs except along the steep-sided S-draining valleys where it lies at right angles to the contours. There is a good example of two former end-on furlongs being ploughed as one, with the ridges riding over the earlier headland (SP510417).

### **Monument Types and Dates**

PLOUGH HEADLAND? (Medieval to Post Medieval - 1066 AD? to 1650 AD?)

RIDGE AND FURROW (Medieval to Post Medieval - 1066 AD? to 1650 AD?)

### **Description and Sources**

#### **Description**

{3} There are brilliant examples of 1636 ridge and furrow at Seales farm. One field shows clearly the reverse S bend created by a ploughing turn.

{4} Much of the ridge and furrow is still well preserved and good examples of hollow ways and headlands are visible in a number of places running between end-on furlongs (eg SP474428 and 487435). Elsewhere end-on furlongs have been joined together; the point of junction is indicated by a sudden change in direction of the ridges and in some places by the merging of two or more ridges into a single one (eg SP482431 and 477429).

### Description and Sources

#### Description

{1} The exact date of the enclosure of the open fields of the parish is not known but Bridges, writing in about 1720, said that the whole lordship was then enclosed and had been so 'for near a 100 years'. Ridge and furrow of these fields exists or can be traced on air photos over much of the parish arranged in end-on or interlocked furlongs. Much of it is still well preserved and good examples of hollow ways and headlands are visible in a number of places running between end-on furlongs (eg SP474428 and 487435). Elsewhere end-on furlongs have been joined together; the point of junction is indicated by a sudden change in direction of the ridges and in some places by the merging of two or more ridges into a single one (eg SP482431 and 477429). On the low lying ground in the extreme west of the parish where a number of small streams meet the River Cherwell large areas of permanent grassland have no trace of ridge and furrow on them and appear always to have been meadowland. One area (SP472433) was known as Burston Meadow in 1840. To the north are two small 'islands' of ridge and furrow, on areas slightly raised above the low-lying flood-plain (at SP468434 and 472435). These suggest that every suitable piece of land was taken into cultivation at some time in the medieval period.

{2} Many ridges and furrows can be seen on the golf course; some, older than others, on the higher ground. One lot rises on the golf course and continues on Chacombe House ground (under trees planted c.1870) finishing in a high baulk.

# Report to Cherwell District Council

**by Nigel Payne BSc (Hons), Dip TP, MRTPI, MCMI**

**an Inspector appointed by the Secretary of State for Communities and Local Government**

**Date: 9<sup>th</sup> June 2015**

---

PLANNING AND COMPULSORY PURCHASE ACT 2004 (AS AMENDED)

SECTION 20

**REPORT ON THE EXAMINATION INTO THE CHERWELL**

**LOCAL PLAN**

Document submitted for examination on 31 January 2014

Examination hearings held between 3 June and 23 December 2014

File Ref: PINS/C3105/429/4

## Abbreviations Used in this Report

AA	Appropriate Assessment
AONB	Area of Outstanding Natural Beauty
CA	Conservation Area
CSH	Code for Sustainable Homes
DtC	Duty to Co-operate
EA	Environment Agency
EH	Historic England [formerly English Heritage]
GB	Green Belt
HE	Highways England [formerly Highways Agency]
HRA	Habitats Regulations Assessment
IDP	Infrastructure Delivery Plan
LDS	Local Development Scheme
LP	Local Plan
MM	Main Modification
NE	Natural England
NPPF	National Planning Policy Framework
OAN	Objectively Assessed Need
OCC	Oxfordshire County Council
PPG	Planning Practice Guidance
SA	Sustainability Appraisal
SCI	Statement of Community Involvement
SCS	Sustainable Community Strategy
SEP	Strategic Economic Plan
SFRA	Strategic Flood Risk Assessment
SHMA	Strategic Housing Market Assessment
SO	Strategic Objective
SUDs	Sustainable Urban Drainage Systems

## Non-Technical Summary

This report concludes that the Cherwell Local Plan provides an appropriate basis for the planning of the district to 2031, providing a number of modifications are made. The Council has specifically requested that I recommend any modifications necessary to enable the plan to be adopted.

All of the modifications to address this were proposed by the Council, but where necessary for soundness I have amended and/or deleted wording where required. I have recommended their inclusion after considering all the representations from all other parties on these issues.

The Main Modifications can be summarised as follows:

- Increase the total number of new houses to 22,840, 2011 – 2031, (1,140 per year) from 16,750, 2006 – 2031 (670 per year) in the submitted plan to meet the full, up to date, objectively assessed needs of the district, including for affordable housing;
- Allocate additional strategic housing sites at Banbury and Bicester and extend others to meet the above, using the sustainable opportunities available to improve delivery in accord with an amended new Housing Trajectory and Infrastructure Delivery Plan, as well as the designation of Bicester as a “Garden City” by government;
- Extend the site of, and increase the expected total of new homes from, the former RAF Upper Heyford site (policy Villages 5) to help meet the increased local housing needs;
- Allocate land at J11, M40 for additional employment development at Banbury (policy Ban 15), but on a smaller scale than that proposed by the Council, which is not fully justified or necessary in the plan period;
- Add a formal commitment from the Council, together with other relevant Councils, to undertake a joint review of the boundaries of the Oxford Green Belt, once the specific level of help required by the city of Oxford to meet its needs that cannot reasonably be met within its present confines, is fully and accurately defined.

## Introduction

1. This report contains my assessment of the Cherwell Local Plan in terms of Section 20(5) of the Planning & Compulsory Purchase Act 2004 (as amended). It considers first whether the plan's preparation has complied with the duty to co-operate, in recognition that there is no scope to remedy any failure in this regard. It then considers whether the plan is sound and whether it is compliant with the legal requirements. The National Planning Policy Framework (paragraph 182) makes clear that to be sound a Local Plan should be positively prepared; justified; effective and consistent with national policy.
2. The starting point for the examination is the assumption that the local planning authority has submitted what it considers to be a sound plan. The basis for the examination is the submitted plan of January 2014. The questions posed during the examination process and for discussion at the hearing sessions are listed in the programme available on the website.
3. This report deals with the main modifications that are needed to make the plan sound and legally compliant and they are identified in bold (**MM**). In accordance with Section 20(7C) of the 2004 Act the Council requested that I should make any modifications needed to rectify matters that make the plan unsound and thus incapable of being adopted.
4. The main modifications that are necessary for soundness are set out in the Appendix and all relate to matters that were discussed at the Examination hearings. Pages 126 onwards of the Appendix deal with consequential amendments to the Policies Map that are a matter for the Council and not part of my formal recommendations. The Council prepared a schedule of proposed main modifications, as well as carrying out a further Sustainability Appraisal (SA), which were subject to public consultation for six weeks.
5. I have taken account of all the consultation responses in coming to my conclusions in this report and in this light I have made some amendments to the main modifications where necessary for soundness, consistency and/or clarity. None of these amendments significantly alters the content of the modifications as published for consultation or undermines the participatory processes and SA that has been undertaken. Where necessary I have referred to these amendments in the report.
6. The Council also prepared a series of additional minor modifications, largely addressing matters of clarification, updating and corrections of text, on which they also sought public comments alongside the main modifications. The Council will take all such responses into account before finalising the plan's text for adoption, but these are not directly relevant to my examination of the plan for soundness and thus most are not referred to further in this report.

## Assessment of Duty to Co-operate

7. Section 20(5)(c) of the 2004 Act requires that I consider whether the Council complied with any duty imposed on them by section 33A of the 2004 Act in relation to the plan's preparation. It is a requirement that the Council engages constructively, actively and on an on-going basis with the County Council, neighbouring local authorities and a range of other organisations, including Highways England (former Highways Agency) (HE), the Environment Agency

(EA) and Natural England (NE). All relevant bodies listed in Regulation 4 have been engaged, albeit some more than others depending on the extent of their involvement in the plan's proposals.

8. In the Duty to Co-Operate Topic Paper (TOP 1) and elsewhere, including in para 149 of the plan itself, the Council has satisfactorily documented where and when co-operation has taken place, with whom and on what basis, as well as confirming that these discussions have influenced the plan preparation process. This includes regular contacts with Oxfordshire County Council (OCC) and Oxford City Council, amongst others, the outcomes of which demonstrate constructive engagement by the Council on an on-going basis, including in relation to the proposed modifications and on future development prospects in the county. They have also provided later evidence that positive engagement has continued since submission. The plan now includes a firm commitment together with other relevant Councils to help meet any needs for new housing arising in the city that cannot be met within its present boundaries.
9. As made clear at the examination and through Inspector Notes 1 and 2, the publication of the new 2014 countywide Strategic Housing Market Assessment (SHMA) (HOU 12d) helped to confirm that there were serious soundness issues regarding the submitted plan, particularly in respect of the level of new housing proposed for Cherwell district. However, its emergence as important new evidence did not affect the Council's compliance with the duty to co-operate up to that point in time, or indeed since, as the necessary on-going co-operation with all relevant parties, including Oxford City Council, had been continuing as expected by the duty and is suitably evidenced to that effect.
10. The formal arrangements now in place between the various Oxfordshire Councils to fully address the results of the 2014 SHMA (HOU 12d) for the county, including the needs of the city, as now referred to in para B.89b of the plan, as modified, reinforce my conclusion that the duty to co-operate has been met by the Council in relation to this plan. Moreover, I also consider that these arrangements should materially assist satisfactory on-going co-operation. This is so notwithstanding that there is as yet no final agreement on how or where the new housing needs of the city that cannot be met within its boundaries, whatever they may be once finally assessed, would be met, as the duty to co-operate is not a duty to agree.
11. For the time being at least, with the important exception of Oxford City Council as referred to above, none of Cherwell's neighbours has sought help in meeting their local housing or other needs and Cherwell has not asked any other authority to help them; nor does it intend to. Furthermore, no other significant cross boundary strategic issues relating to co-operation with neighbouring Councils or Reg. 4 bodies remain unresolved. Any future request that may come from London for help in regard to the capital's needs would be a matter for a new or reviewed plan to consider at the appropriate stage(s). Therefore, I am satisfied that the duty to co-operate has been met.

## **Assessment of Soundness**

### **Preamble**

12. The principal area of debate surrounding this plan relates to the provision of new housing over the plan period to 2031. Clearly, the plan is expected to

comply with the National Planning Policy Framework (NPPF) (March 2012), including by defining the full, objectively assessed, needs for both market and affordable housing at the outset (para 47 NPPF), before deciding whether or not it can be delivered in practice, taking into account relevant national and important local constraints, such as Green Belt and flood risk.

13. Many respondents expressed serious doubts about the Council's overall approach to new housing in the submitted plan, not least regarding the initial assessment of need. I have shared some of those concerns during the examination process, as reflected in my initial findings following the first hearings in June 2014. The Council has responded positively by reconsidering their figures, particularly in respect of using the full, up to date, levels of objectively assessed need (OAN) in the 2014 Strategic Housing Market Assessment (SHMA) (HOU 12d), in producing the proposed modifications in August 2014, in accord with the guidance in the NPPF.
14. Consequently, these now include a significant increase in the level of new housing provision from 16,750 (2006 – 2031) to 22,840 (2011 – 2031) net new homes over the plan period and the allocation of additional strategic sites, as well as extensions to others, to meet the full OAN for the district. Together with the other relevant authorities, the Council has also chosen to make a firm commitment to a joint review of Green Belt boundaries around Oxford in order to help deliver the necessary new homes to meet the city's identified local needs that cannot be met within it in the near future. This should ensure that the overall needs of the countywide housing market area are fully addressed.
15. For further justification of the logic and merits of the Council's decision to select the high growth option, as many respondents pointed out, it is relevant to consider comparisons with Cambridgeshire, with its equally pre-eminent university city, and the economic growth that has taken place there recently and which will continue in the overall national interest. Therefore, I endorse this important policy decision by the relevant Councils, including Cherwell, as appropriate, reasonable and realistic in the current context.
16. The Council also expects to make other new housing land allocations in the Part 2 LP below the strategic site size level and there will also be a continuing contribution from "windfalls" (para 48 NPPF), as well as from sites brought forward through neighbourhood plans. The plan's vision, objectives and overall strategy of concentrating most new development at Banbury and Bicester, together with some provision at Upper Heyford and Kidlington, remains essentially unchanged. Therefore, I am fully satisfied that the Council's proposed modifications are not so extensive or so significant as to constitute a complete re-write of the originally submitted version or, effectively, a new plan and that they are, essentially, sound.
17. It is unrealistic to expect that this district could reasonably provide for all of any unmet need arising from the city of Oxford's lack of capacity to meet all of its own requirements, as set out in the 2014 SHMA. Clearly, a joint approach involving all the relevant Councils is required on a co-operative basis to fully address the OANs of the whole county as one overall strategic housing market area. Such a process could only be harmed by Cherwell not meeting its own full district OAN, but if it does then that will at least mean that the pressures on the city of Oxford will not be made any worse by a failure to deliver the

necessary level of new housing in this district and the sustainable development of the county as a whole will be materially assisted.

18. Accordingly, I am satisfied that it is appropriate for this plan to proceed on that basis, provided that there is a firm commitment from the Council to play its part in addressing the needs of Oxford city through that joint process in the near future, once those needs have been fully clarified/confirmed. In my judgement, the Council's modifications, notably in para B.89.b, are intended to and should help achieve that important objective.

## **Main Issues**

19. Taking account of all the representations, written evidence and the discussions that took place at the examination hearings, I have identified fourteen main issues upon which the soundness of the plan depends.

### **Issue 1 – Strategy, Vision and Objectives**

20. The plan sustainably focuses new development in the district's two main market towns of Banbury and Bicester, with their good transport connections, including by rail and on the M40 to London and Birmingham, and where most major services and facilities are located. The majority of local employment opportunities are also sited here. These two large towns are clearly the most sustainable locations in the area.
21. Additional development, albeit of a smaller overall scale, is also directed to Upper Heyford, a very large former military base, and the village of Kidlington, particularly in respect of high tech employment in the latter case, involving a local, small scale, Green Belt (GB) review, as proposed by the Council in the submitted plan. This is to provide a greater variety of realistically deliverable and sustainably located opportunities to help meet local needs, including for the rural areas outside the two main towns.
22. Otherwise, the Council's strategy envisages only limited new development in the more rural parts of the district, some of which in the south is designated as part of the Oxford Green Belt (OGB) around the city, with a small area in the north-west included in the Cotswolds Area of Outstanding Natural Beauty (AONB). Accordingly, new housing to meet local needs in the rural area is largely directed towards high and medium sustainability villages only. A plan strategy that focussed most of the new growth needed on the edge of Oxford rather than Bicester and Banbury would simply not have been a "reasonable alternative", due to the scale of the loss of GB around the city contrary to the guidance in the NPPF and the PPG, as well as the likely infrastructure and environmental implications.
23. In contrast, delivery of the selected strategy and the vision for the district is properly linked with the provision of the necessary supporting infrastructure, involving close working with Oxfordshire County Council (OCC), as set out in the Infrastructure Delivery Plan (IDP) (App 8), especially in respect of transport and education, but also for other necessary community services and facilities. This takes into account already planned enhancements of the area's transport network, including the East/West rail scheme and M40 junction improvements, as well as the implementation of the Oxford/Oxfordshire City Deal (2014) that has secured funding for new investment locally to help

deliver the economic growth of the county envisaged in the Strategic Economic Plan (SEP) for Oxfordshire (ECO 09) (March 2014). The 2013 LP Viability Study (PWE 02) and 2014 update (PWE 03) provide firm evidence that the policies and proposals of the plan are realistically and economically deliverable in terms of on and off site infrastructure provision, as envisaged in the plan.

24. In this local context, the plan's spatial vision and strategic focus for new development on Banbury and Bicester, plus Upper Heyford, is entirely sound and sustainable in principle. Both are also fully consistent with national guidance in the NPPF and PPG; provide a policy background that has good prospects of achieving the anticipated levels of growth and do not rely on the delivery of developments in any neighbouring areas for success. There is no clear evidence that, realistically, any of the alternatives put forward by representors would be more likely to do so over the plan period.
25. The strategy is supported by 15 sensible strategic objectives (SO), each of which has an appropriate part to play in delivering the plan's vision to 2031. The vision and objectives are also consistent with the relevant national guidance in the NPPF and PPG, as well as the Oxfordshire Sustainable Community Strategy (SCS) (TOP SD 25) that seeks to create a world class economy for the county, focussing particularly on the high tech sector.
26. Overall, the Council's evidence base relating to the strategy, vision and objectives of the plan is clear and robust. It is also sufficiently comprehensive and detailed, including by clearly demonstrating that reasonable alternatives to the proposed strategy have been assessed at all the relevant stages dating back to 2008 ("Options for Growth") of the Sustainability Appraisal/Strategic Environmental Assessment (SA/SEA) process. This includes in respect of the final submission SA (December 2013) (SUB 04a-d) and subsequent Addendum (August 2014) (SUB 26PM) relating to the main modifications.
27. This has been on an iterative basis, with appropriate inputs to the various versions of the emerging plan that have reasonably and realistically reflected the outcomes of that work and together show how and why the preferred strategy was selected. Any scenario that relied on a more dispersed pattern of major developments instead and/or strategic scale releases of land in the OGB, would simply not have been reasonable or realistic at any stage of the plan preparation process so far in relation to national policies/guidance in the NPPF and PPG.
28. Similar conclusions apply in respect of the work carried out on the Council's behalf in relation to the Habitats Regulations Assessment/Appropriate Assessment (HRA/AA) (SUB 09/10/11) and subsequent Addendums (SUB 26PM/27PM), given that necessary amendments were made to subsequent draft stages of the plan. Accordingly, and taking into account the advice from relevant consultees, notably Natural England (NE), the plan is sound in these respects and requires no further modification.
29. All the available evidence, and particularly the Statement of Consultation (SUB 05) and Addendum (SUB 28PM), confirm that the Council has carried out extensive and appropriate public consultation at each relevant stage of the plan process, including in respect of the proposed main modifications, in accordance with its Statement of Community Involvement (SCI) (July 2006)

(BAC 09).

## **Issue 2 – Employment (Policy SLE 1)**

30. As modified, the plan now positively seeks to deliver a net increase of approximately 23,000 new jobs in the district by 2031, on around 236 ha (gross) of land identified, compared to about 15,000 in the submitted version. This is in the light of the increased new housing proposed and taking account of the August 2012 Cherwell Economic Analysis Study (ECO 01) and its Addendum (ECO 12PM) that anticipates a 0.5% annual district growth rate.
31. Several strategic new employment sites to help provide these jobs would be sustainably focussed primarily at Bicester, but also at Banbury, alongside the majority of the new housing. The LP Viability Study (PWE 02) and update (PWE 03) provide robust evidence that the strategic employment sites identified are essentially deliverable under current market circumstances, albeit some are marginal. However, there is also clear evidence of sites continuing to come forward “on the ground” in both main towns, with good progress made towards delivery on others. Moreover, the plan now contains greater flexibility over B class uses and mixed schemes can also take advantage of an element of cross funding of infrastructure from residential development. Thus, all are considered to have reasonable prospects of completion over the plan period.
32. Whilst Banbury has a relatively good balance between housing and jobs at present, including 41% of the district's employment, the strategy rightly seeks to redress the balance somewhat in Bicester (20% of current employment) to help reduce out-commuting through new job growth, by taking advantage of its good and improving transport links, including for B2 and B8 uses.
33. There would also be limited provision at Kidlington to support its contribution to the important role of Oxford in the county's economy. This would involve a local, small scale, review of the boundaries of the OGB around the existing Begbroke Science Park and Langford Lane/Oxford Airport (Oxford Tech Park) locations. It is intended to reinforce their roles as part of a high tech “cluster” of existing businesses that includes university “spin off” companies with good short term growth prospects. The specific details of this review are a matter for the LP Part 2, albeit two “areas of search” are identified. All of the above is consistent with the Oxford/Oxfordshire City Deal, the Oxfordshire Strategic Economic Plan (ECO 09) and the Oxford Innovation Engine report (ECO 10), as well as the Economic Analysis Study for Cherwell (ECO 01).
34. It is essentially unrealistic to have specific jobs growth targets for particular sectors of the economy, as the market is inherently more flexible and the relevant technologies change so quickly, nowadays. In that context, the evidence supports the plan's conclusion, that, including existing commitments and allocated sites, enough office space is likely to be available over the plan period such that no new strategic level provision is required. In these circumstances, any other proposals for B1 office space should therefore be considered on their own merits in the light of specific local needs and all other relevant plan policies.
35. There is a significant supply of land committed for B8 uses that is likely to

come forward over the plan period. Nevertheless, the B8 sector continues to be successful locally and the area retains its general attractiveness for logistics operators. It is also desirable to retain a range of size and type of sites for potential new businesses and the expansion of existing ones to provide local jobs, including towards the end of the plan period. Moreover, the "frontloading" of that supply should increase choice and provide flexibility to help achieve that aim as part of the area's economic growth. At present, the limited availability of larger sites to meet Banbury's needs in particular is said to be inhibiting these prospects.

36. Therefore, taking into account the increased level of new housing, an additional strategic employment site has been proposed at J11 of the M40 (new policy Ban 15) in the modified plan. This should help meet the identified demands from local companies for further B2 and B8 space in the Banbury area. The main modifications put forward by the Council in relation to this site are addressed in detail under issue 11. With this additional allocation, in principle, the employment provision satisfactorily reflects the overall spatial strategy of the plan, including the likely level and locations of new housing, as well as local needs for new employment opportunities, and would help maintain a broad balance between the two. It also takes into account the limited loss of some existing employment land in Banbury in connection with the proposed re-development of the Canalside site (policy Ban 1).
37. The Council's evidence includes the 2012 Employment Land Review update (ECO 06), a review of all existing sites across the area which confirms, amongst other things, that the vast majority remain suitable for continuing B class uses. Accordingly, and taking into account the natural "churn" of sites within these sectors and the provisions also made at the strategic sites to balance most of the new housing requirements, it is appropriate that policy SLE 1 should seek to retain the vast majority of existing and allocated employment sites in B class uses. However, a rewording of the policy and some of the supporting text in paras B41 and B46 is necessary for clarity and to assist its operation in practice, including the introduction of greater flexibility to accept differing B class uses in particular locations (**MMs 19/20**).
38. Subject to the necessary monitoring and review set out in the plan, policy SLE 1 should provide for sustainable economic growth and meet the objectively identified business needs, in accord with the expectations of the NPPF. Nor does it constrain additional job provision coming forward above the estimated figures in suitable locations, including on mixed use sites and within existing built up areas, should that prove realistic and viable, including alongside new housing growth. This also takes into account the anticipated increases in jobs arising from local growth in non B use class sectors, such as retail, which is sustainably focused on the town centres of Banbury and Bicester.
39. Consequently, with one exception at J11 M40 on the edge of Banbury, there is no need for the plan to identify any further strategic or out of town locations for major new employment development, in order to provide a broad balance between new homes and new jobs over the plan period. None of the further strategic employment site alternatives put forward by representors, whether related to motorway junctions or elsewhere in the area, would provide a more sustainable location than those in the plan. Those of a non-strategic scale can be considered on their own merits in the LP Part 2, if appropriate, or in

relation to specific proposals against other relevant policies.

40. Together with the renewal and regeneration of some older industrial areas, as part of the retention of existing employment land and buildings under policy SLE1, as well as growth in office space and non B class uses, such as retail, the plan provides an appropriate overall approach to sustaining, diversifying and improving the local economy, in accord with the NPPF. The policy is also consistent with and should help to meet strategic objectives SO 1 to SO 5. This includes by focusing new employment development first on the most sustainable locations at Banbury and Bicester, followed by Kidlington to a lesser extent, particularly in terms of high tech employment. Accordingly, with essential modifications for clarity of intent (**MM21**), policy SLE 1 is sound and compliant with NPPF guidance, such as in paras 21, 23, 24 and 161.
41. However, despite the Council's willingness to include a reference to "examining options for the release of land at motorway junctions in the district for very large scale logistics buildings in the Part 2 LP", it is not necessary or appropriate to include this commitment in the policy. This is because the existence of such a need, specifically in this district, is as yet largely unproven and appears to be essentially reliant on speculative enquiries only at present. Moreover, such schemes would be road based and likely to prove visually intrusive in the open countryside due to the size of buildings, as well as potentially difficult and/or expensive to cater for satisfactorily at the M40 junctions in highway capacity terms.
42. Nor does it take into account the availability of alternative locations, such as at DIRFT III near Daventry, Northamptonshire, not far away from Banbury, where around 345 ha of land for such uses has recently been permitted under the national infrastructure regime, specifically to meet the national and regional need for such major facilities, with the great advantage of rail access availability in sustainability terms. Given that the strategic and other employment sites identified in the plan are sufficient to provide the level of new jobs necessary to deliver the plan's strategy and objectives over the plan period, there is no particular need for policy SLE1 to include this commitment by the Council, not least as it may raise unrealistic expectations and/or unnecessary concerns as to the content of the Part 2 LP. Otherwise, policy SLE 1 is sound.

### **Issue 3 – Housing Scale and Distribution (Policies BSC 1 to 6)**

#### *Policy BSC 1*

43. The submitted plan included provision for 16,750 new homes (670 per year) in the district from 2006 to 2031. This was largely based on a 2007 countywide Strategic Housing Market Assessment (SHMA), as supplemented by a 2012 update and review for Cherwell district only. However, following the hearings in June 2014, my preliminary findings were that this figure did not represent the full, objectively assessed, local need for new housing.
44. This was largely because it essentially relied on an out of date evidence base. This had not been properly reconsidered in the light of current needs and circumstances, including not only the guidance in the NPPF, but also the 2011 Census results, amongst other things, such as more recent DCLG/ONS

population and household projections providing the necessary inputs on migration and demographic change. Nor did it represent an unconstrained initial assessment of needs, including for affordable housing, to which relevant constraints and market factors could later be applied, as required by the NPPF.

45. The Council responded positively by reconsidering their figures, particularly in respect of using the full, up to date, levels of objectively assessed need (OAN) in the 2014 Oxfordshire SHMA (HOU 12d), in producing the proposed main modifications in August 2014. Importantly, as a starting point, the 2014 SHMA figures are not affected by considerations of possible constraints to capacity or to delivery, in either policy or practical terms, in accord with the NPPF's requirements in this regard.
46. This re-assessment has led to a net new housing requirement of 22,840 homes for the district, equivalent to an average of 1,140 units per year from 2011 to 2031 to meet local needs. It is based on the Council's conclusions, supported by other relevant Councils, that the district's sustainable development can realistically only be fully met through the very positive "Committed Economic Growth" scenario set out in the SHMA. As a policy decision by the Council over and above the numbers needed to meet population and demographic projections alone, this takes into account the present level of employment commitments in the district and nearby, the very positive prospects for the county's economy, the relevant county and district Strategic Economic Plans, the Oxford/Oxfordshire City Deal (2014) and the objectives of the two Local Economic Partnerships involved.
47. Criticisms of the 2014 SHMA and the Council's decision to adopt the higher "Committed Economic Growth" scenario outcome as the basis for the new housing figures focus on both the process undertaken and the factors taken into account. However, the process was defined and the methods agreed and monitored by all the Councils commissioning the work from independent consultants, at each relevant stage, as being consistent with the requirements set out in the NPPF, such as paras 47 and 159, and appropriate for the task. In common with all the relevant councils at the hearings, I am fully satisfied that the methods used in, and the scenario outcomes arising from, the 2014 SHMA are consistent with the requirements of the NPPF and the PPG.
48. Other criticisms of the SHMA are essentially based on alleged inadequacies and inconsistencies in national policy and in relation to the potential implications that might arise. For example, it is argued that developers will simply sit on land once allocated and ration delivery of new housing according to their own financial interests alone. However, neither individually nor collectively do these criticisms amount to a justification for finding the SHMA or the modified new housing figures unsound, still less the plan or its strategy, vision and objectives, given their consistency with the NPPF and PPG.
49. Forecasting of new housing needs is not an exact science. It has been particularly difficult of late with complications arising from the recent recession, particularly in respect of new household formation, and short term variations in international migration into this country that are difficult even to accurately record, let alone project forward with confidence for a number of years. Notwithstanding, I have concluded that the Council's revised total, based largely on the 2014 SHMA, is essentially consistent with national

guidance as to best practice in this regard, and suitable for the purpose in this particular instance, having regard to the local circumstances referred to above.

50. As required by the NPPF, it also properly reflects current "market signals" confirming the strong level of demand in the area given its location. For instance, Oxford has recently been identified in the property market as the "least affordable location in the country" to buy a home. The evidence for the very positive economic growth prospects in the county in general and the district in particular is robust and realistic, bolstered by the national economic recovery now underway. It has therefore been acknowledged by the relevant Councils, including Cherwell, as the most suitable and appropriate basis on which to plan for their new housing needs up to 2031.
51. This enhanced level of growth significantly above the baseline requirement necessary for population growth and demographic trends alone would take full account of the robust economic evidence, as well as the strong "market signals". It would help to deliver sustainable development by taking advantage of the good opportunities for new employment growth in the district and nearby to benefit the local, regional and national economies as a result. It would also take advantage of important transport improvements locally, especially for rail services and facilities.
52. In the Council's judgement and as demonstrated in the modified plan this can be done without the need to release land from the OGB for new housing, compromise the appropriate protection of the small area of AONB in the district or build on areas of significant flood risk. Suitable infrastructure provision can also be viably and realistically delivered to facilitate that level of development over the plan period.
53. None of the alternative proposals produced by representors would provide a more suitable basis for new housing provision, taking into account all the evidence submitted, including that with the proposed main modifications and the comments thereon. In short, a "business as usual" scenario, continuing previous levels of new housing delivery in the district or just meeting local population growth and demographic trends alone, as advocated by some, is simply not realistic or reasonable in current circumstances and would not be compatible with the requirements of the NPPF (e.g. para 158).
54. In contrast, the 2014 SHMA and the modifications arising from it now properly address the NPPF's requirements for a "significant boost" to new housing supply and to meet the full OAN, including for affordable housing, as well as take account of "market signals", which the submitted plan did not. The Council's work on the modifications, including the SA Addendum (2014), has confirmed that the full OAN for Cherwell can be met over the plan period without the need to remove land from the OGB for new housing or to compromise any other policies of the NPPF, such as in respect of nature conservation sites of European importance or flood risk. Thus, there are no significant national or local policy constraints that preclude the Council's ability to plan for meeting the full OAN in the district over the plan period.
55. Moreover, the revised IDP also indicates that the necessary levels of infrastructure can be viably delivered alongside the new homes and related development, particularly given the promised government funding to help with

delivery in Bicester as a new "Garden City". All of the above strongly reinforces the conclusion that the higher level of new housing is reasonable and realistic, particularly as the plan's strategy concentrates the vast majority on Bicester and Banbury with an overall reduction in the annual rate in the rural areas of the district so that their character and appearance need not be materially harmed. The plan, as modified, should also help to reduce pressures for development in and around Oxford city, albeit not to the extent necessary to meet all of its needs that seem likely to be unmet within its present boundaries, such as through the major growth at Bicester, which is not far away and with significantly improving public transport links to Oxford and elsewhere.

56. All the available evidence, including the recent viability update (PWE 04PM) indicates that both the timing and total of new housing would be largely viable and essentially deliverable over the full plan period, albeit challenging for all concerned given that this level has only been achieved in one previous year (2005/6) in recent times. Notwithstanding, the Council's evidence in the IDP (App 8) is essentially robust, up to date and credible in these respects, with no insurmountable barriers (or "showstoppers") apparent in relation to the strategic sites.
57. Whilst this conclusion is based on the current position, continuing strengthening of the national and local economy could only reinforce this judgement. I therefore conclude that the plan, as modified, would be effective in this regard. Moreover, there are also no phasing restrictions in the plan that might hinder an enhanced rate of delivery should that prove viable on any strategic site, or elsewhere. In the light of all of the above, there would be no justification for any such measures in any event.
58. Overall, and taking into account all the available evidence, statements and submissions, I conclude that, as modified, the plan is based on a full and up to date objective assessment of housing need in the area to 2031, taking account of reasonable population and household projections, having regard to all relevant local factors, including current market conditions in the district. The modified new housing total and revised housing trajectory represent a reasonable and realistic, deliverable and justified, basis for meeting local needs over the plan period. In particular, there are no national or local policy constraints that significantly and demonstrably outweigh the benefits of complying with the other relevant parts of the NPPF in terms of meeting the full OAN for new housing, including affordable housing, in Cherwell to 2031.
59. The plan would be consistent with the objectives of the NPPF in providing a significant boost to new housing delivery and in terms of helping to provide a rolling 5 year supply of sites across the area. In particular, this would be assisted by the allocation of the strategic sites that are critical to overall delivery, in direct accord with the first point in para 47 of the NPPF. Through its policies, the plan would also confirm the general suitability of other sites, encouraging their early development.
60. The proposed main modifications were subject to public consultation and SA/SEA and I have taken all the responses fully into account in reaching these conclusions on this important issue. They also include a new housing trajectory to help ensure that the plan is effective and up to date (**MM 168**).

Nevertheless, it can only be a broad estimate of likely new housing delivery, including on the strategic sites, and will have to be regularly reviewed through the plan's monitoring process.

61. Overall, I conclude that, subject to appropriate main modifications that are essential for soundness, including provision of 22,840 net new homes (**MM 34**), as well as the identification of additional and extended strategic sites, the plan suitably and sufficiently addresses the full OAN for housing, including affordable housing, in Cherwell to 2031.
62. Much of the supporting text to policy BSC 1 also needs to be modified to accord with the above (**MMs 30-33**). It is also essential for clarity and soundness that the Council's firm commitment to help meet the needs of Oxford city as part of the countywide housing market area, jointly with other relevant authorities including through the Oxfordshire Growth Board, as well as in respect of the Oxford and Oxfordshire City Deal (2014), is formally recorded in the plan as in new paras B.89.b and B.90 (**MMs 28-29**).
63. This joint review of the boundaries of the OGB, as distinct from any "in principle" consideration of the need for its existence, will have to take into account the important objectives that underpinned its initial designation, as well as the OANs of the city of Oxford that cannot reasonably be met within its present built up area. However, the fact that it was first designated and defined very many years ago now supports the conclusion that a review of its boundaries is at least timely, if not necessarily overdue.

#### *Policy BSC 2*

64. In regard to the distribution of new housing across the district, the plan logically focusses the majority on strategic sites at Bicester (around 10,000) and Banbury (about 7,300), clearly the most sustainable locations. Approximately 5,400 homes are also directed to the former RAF Upper Heyford, Kidlington and the largest villages, thus on a lesser scale overall, consistent with their status in the settlement hierarchy.
65. The general concentration of new housing on sites around Bicester and Banbury partly reflects their clear potential to deliver significant numbers of new homes in a relatively short timescale, alongside the provision of necessary new infrastructure, services and facilities to support growth and help to achieve the plan's aims and objectives. Together, these allocations provide an appropriate range of size and type of new housing site across the area to provide reasonable choice and some flexibility for the house building industry. The involvement of national house builders in many of the allocated sites in the plan should also assist early delivery in most cases.
66. In these circumstances the balance of new housing between the two towns and the rural areas is appropriate, given the economies of scale and concentration of new infrastructure that are likely to assist delivery in respect of the former. These conclusions are borne out by the additional SA/SEA work prepared in relation to the proposed main modifications. The same would not apply to a more dispersed pattern of new housing growth, incorporating smaller scale schemes at less significant settlements. Accordingly, subject to the proposed modifications, the general distribution of housing put forward in

the plan is also sound.

67. Policy BSC 2 properly expects that new housing should make effective and efficient use of land by seeking a density of at least 30 units per net developable hectare on all sites, unless a particular justification exists for a lower figure. It also encourages the re-use of previously developed or "brownfield" land in sustainable locations, including on a number of major allocated sites in Banbury, Bicester and at former RAF Upper Heyford. Both elements are entirely in accord with national guidance in principle. However, modifications are necessary for soundness, including to delete reference to a specific target percentage over the plan period (and to amend the text accordingly), as this would be largely a "hostage to fortune" in the absence of any phasing mechanisms or other control measures in the plan (**MM 25-30**).

#### *Policy BSC 3*

68. In relation to affordable housing, a net need of 407 new affordable units a year has been identified in the 2014 SHMA, excluding any contribution from the private rented sector. This high level of need is properly reflected in the full OAN figure for the district of 1,140 new homes annually from 2011 – 2031 and the housing trajectory (App 8). The Council's own active involvement with a district wide community land trust and self-build projects, including a major one at Graven Hill, Bicester (Bic 2), should materially assist in meeting the affordable housing needs.
69. The Affordable Housing Viability Study and later update (March 2013) adequately demonstrate that, in general, affordable housing can normally be delivered in Cherwell without social housing or other grant funding and that percentage rates of 30% in Banbury and Bicester and 35% elsewhere are viable under current circumstances, taking into account all other relevant policy requirements of the plan. This is based on an expected tenure split of 70% affordable/social rented and 30% intermediate housing that also accords with identified local needs.
70. However, in view of the latest government policy announcement on affordable housing (28 November 2014), it is necessary for soundness to delete the third para of policy BSC 3 in relation to all schemes of 3 - 10 dwellings and add the words "and elsewhere in the district" after "Kidlington" in the second para thereof for consistency (**MM 39**). Subject to this, the policy is sound and fully justified by the available evidence. It would help meet the affordable housing component that is fully included in the total OAN figure for the district.

#### *Policy BSC 4*

71. The 2014 SHMA also provides relevant up to date figures on the mix of size and type of new housing needed in the district between now and 2031, including that arising from the significant increase in the percentage of elderly people in the population, as acknowledged in the NPPF. Given that a relatively recent study (February 2011) confirms that overall scheme viability would not be significantly reduced, policy BSC 4 appropriately seeks a mix of homes to meet identified local needs and help create socially mixed communities, including that a minimum provision of extra care units will be expected on larger schemes of 400 dwellings or more. Subject to the updating of the text

to reflect the 2014 SHMA and addition of a reference to the provision of housing for the disabled and those with mental health needs, and others for clarity, the policy is sound (**MMs 40-45**).

*Policy BSC 5*

72. Policy BSC 5 confirms the Council's general support for and direct investment in improving the physical and community fabric of particular areas of the district with challenging social conditions. This includes in eastern and western Banbury in accord with the "Brighter Futures in Banbury" initiative. The policy is sound with no modifications required.

*Policy BSC 6*

73. An up to date assessment (January 2013) for the district (and two adjoining authorities) indicates that a further 15 pitches are required from 2012 – 2027, with 5 by 2017, to meet the local needs of the gypsy and traveller communities. A similar, albeit older (2008), assessment for travelling show-people concludes that their needs are for a further 14 plots by 2018. Applying a compound growth rate of 3% to the latter and extrapolating the 5 year scenarios in the needs assessment for the former (HOU 06) results in a need for 19 (net) new pitches and 24 (net) new plots by 2031. The Council has modified the numbers in the policy accordingly (**MM 46**).
74. No new pitches/plots are specifically identified as a result. However, this policy in a Part 1 LP would be followed shortly by a LP Part 2 that will allocate the required sites, as the Council has always intended from the outset of the overall process. The relatively swift completion of the LP Part 2, according to the Council's LDS, should ensure that there is no significant delay to the local needs of the gypsy and traveller communities being properly addressed and met by 2017 at the latest. In particular, para E.12 of the monitoring and delivery section of the modified plan now refers to the allocation of non-strategic sites for new housing, which would include for the needs of gypsies and travellers, in the LP Part 2 (or Neighbourhood Plans) and there is a specific indicator and appropriate target included in Theme Two of this plan's monitoring framework. I thus consider the approach to the assessment and provision of gypsy and traveller accommodation to be sound.
75. Also of importance in meeting gypsy and traveller needs locally, the latter part of the policy sets out a sequential and criteria based approach, to be utilised for both site selection in LP Part 2 and in the consideration of planning applications, that is comprehensive in its coverage. This should enable further gypsy and traveller sites to come forward during the plan period. Subject to adding relevant references to the existing level of local provision, the availability of alternatives to applicants, and reasonable walking distances, the policy tests and criteria are reasonable and contain sufficient and suitable detail to assist implementation, albeit para B.140 of the text also needs to be deleted as inappropriate (**MM 46**). The remainder of the policy is sound.

#### **Issue 4 – Retail (Policy SLE 2) and Tourism (Policy SLE 3)**

*Policy SLE 2*

76. A retail hierarchy for the district is effectively established through policy SLE 2

**(MM 22)**, with first Banbury and then Bicester naturally at the top and where the majority of new floorspace will be directed over the plan period, albeit with some limited further provision in Kidlington village centre. Although there are no specific figures in the policy itself, para B.51 of the text refers to the 2012 Retail Study (ECO 03) that identified the scale of need for both comparison and convenience shopping in the district up to 2031. This constitutes robust and up to date evidence to support the plan. As with all such studies, the Council can reasonably be expected to review the district's retail needs from time to time as a part of their normal monitoring process. Hence, it is not essential for a firm or formal commitment to a review date to be included.

77. Confirming developer interest and viability, new investment in retail led schemes is already underway in both main town centres to complement the allocated residential and employment development, with a range of suitable sites identified in the plan in accord with para 23 of the NPPF. These sites should provide sufficient capacity to deliver all the new floorspace deemed necessary in the 2012 Retail Study (ECO 03). However, the extension of town centre boundaries to take those projects into account does not need to be undertaken in this plan. Rather, in the main, this is a matter best addressed once the allocated sites have been developed and any wider effects on the functions and operations of the town centres as a whole taken into account.
78. Consequently, it is appropriate that this plan includes "areas of search" where such changes will be considered, with the detailed re-definition of boundaries to follow in the LP Part 2. This applies in Bicester, in relation to Bicester Village and its relationship to the town centre, as it does to Banbury in connection with the Canalside scheme (policy Ban 1). Given its specialist retail offer and economic importance to the district, it is equally appropriate that new text (para B55a) is added to clarify the niche role of Bicester Village, outwith the main hierarchy and the town centre, as it is not a suitable location for "main town centre uses", but complementary thereto. It is also relevant to record in the plan the Council's support for its further expansion in principle, not least to assist with improved connectivity with the town centre in all respects **(MM 23)**.
79. The policy itself requires some amendment to its wording for clarity and ease of implementation, including confirming that preference will be given to sites well connected to town centres; that compliance with policy SLE 4 (Transport) will be expected and that the Retail Study (ECO 03) provides supporting evidence and is background information, rather than having a direct role in the determination of applications. In addition, the policy's last sentence needs to be clear as to the type of retail floorspace that should be provided in connection with new residential developments and that it should be limited in scale and nature, so as not to risk harm to the vitality and viability of main town and other local centres **(MM 24)**. In all other respects the policy is sound and consistent with SO 4.

#### *Policy SLE 3*

80. Policy SLE 3 on tourism, which currently contributes around £300m to the district's economy, positively supports the provision of new and/or improved facilities in sustainable locations, including new hotels in both Banbury and Bicester, in accord with the guidance in para 28 of the NPPF and the 2008

Cherwell Tourism Development Study (ECO 04), as well as SO 5. In particular, the plan recognises the relevance and value of Bicester Village as a national/international tourist destination, with about 3.6m visitors a year, as well as the potential for new tourism developments at the former RAF Bicester, in the two main towns and along the Oxford canal.

81. However, for accuracy and completeness, the supporting text of the policy also needs to refer to the important opportunity for the creation of a Cold War visitor centre/experience at the former RAF Upper Heyford in connection with the retention and conservation of its unique character and features, as endorsed by Historic England (EH), as an integral part of the re-development and re-use of the overall site (**MM 26**). Otherwise, policy SLE 3 is sound.

## **Issue 5 – Transport (Policies SLE 4 and 5)**

### *Policy SLE 4*

82. The district already benefits from relatively good rail links, with significant improvements in progress, including the East – West link, the new station at Water Eaton and the upgrading of Bicester Town station. There are also generally good road links, including on the M40 to London and Birmingham. However, peak hour highway congestion issues in Banbury, Bicester and on the A34 and A41 all need to be addressed over the plan period, as does the improvement of bus services in the former particularly, notably across town.
83. In addition to making strategic site allocations where they are or can be made to integrate well with the existing local transport network, including rail and bus services, walking and cycling, the plan sustainably promotes modal shift away from private car use, where possible. New development is also expected to contribute to necessary improvements to transport infrastructure and services, including at M40 Junctions 9 and 10, in accord with the Oxfordshire Local Transport Plan 2011 – 2030 (LTP 3) and its update/review (LTP 4).
84. Both HE and OCC as local highway authority endorse this policy, as proposed to be modified, as well as the overall strategy and proposals in the plan, in terms of their respective interests and responsibilities (SOCG PM21). This includes confirming that, with the improvements planned, including at the M40 junctions, the strategic highway network should be capable of satisfactorily accommodating the growth levels in the modified plan to 2031.
85. Some amendments to the SLE 4 policy wording and text with consequential ones elsewhere in the plan are however necessary for soundness, including that transport improvements are required in connection with the re-development of the former RAF Upper Heyford. They would also clarify that options for new link and relief roads on the local networks at Banbury and Bicester towards the end of the plan period and beyond will be subject to full public consultation through the LTP review process, conducted by the County Council, and the LP Part 2, which will identify routes (**MM 25**). This is important as there has been some level of local uncertainty up to now on how these matters would be progressed. Subject to the above, and the addition of a reference to sustainable transport (**MM 27**), the policy is sound.

### *Policy SLE 5*

86. Policy SLE 5 relates to the High Speed 2 rail link between London and Birmingham that is planned to pass through the district. As this is a national infrastructure project, the policy is properly confined to setting out how the implementation of the scheme would be managed by the Council in association with the promoters/developers and contractors/operators, in order to minimise adverse impacts and maximise benefits for the locality. As such, it is sound.

**Issue 6 – Climate Change, Energy, Environment and Landscape (Policies ESD 1 – 18, except ESD 14)**

*Policy ESD 1*

87. Measures to be taken locally to mitigate the climate change impacts of new development are set out in policy ESD 1, including in respect of carbon emissions and renewable energy, as part of a proactive strategy with policies ESD 2-4 for adaptation. Bearing in mind the physical and environmental constraints to development in the district, notably in respect of flood risk, it is sound as submitted and has been properly taken into account in the identification of strategic site locations in the plan, as well as consistent with SO 10 in particular.

*Policy ESD 2*

88. Policy ESD 2 promotes an “energy hierarchy” and, as now modified by the Council (**MMs 52-55**), also includes reference to “allowable solutions”, so as to provide an additional element of flexibility in accordance with the emerging national approach. Accordingly, it is sound.

*Policy ESD 3*

89. Representors have suggested that policy ESD 3, dealing with sustainable construction, is no longer necessary in the light of the government’s decision (25 March 2015) to phase out the Code for Sustainable Homes (CSH) and for all such measures to instead be required under the new national technical standards. However, this will not apply to non-residential buildings and the policy makes direct reference to requirements being “in line with Government policy”. Therefore, acknowledging that there may well be a need for an early review regarding new housing, the policy, as modified/updated by the Council, remains relevant in principle, albeit some amendments to wording are needed for clarity and soundness (**MMs 56/57**). It is justified in relation to other forms of development in any event, as well as in the light of Cherwell’s designation as an area of water stress, and thus sound.

*Policy ESD 4*

90. The Council’s in principle support for decentralised energy systems, reflecting the broad potential for such supply in the district, in policy ESD 4, includes a requirement that all new housing schemes of 100 units or more should carry out a feasibility assessment for district heating and/or combined heat and power. Given the last sentence of the policy making the requirement subject to viability and deliverability and providing the opportunity for alternative solutions, the policy is not unreasonable or unduly restrictive. Even at this relatively low threshold of scheme size it is appropriate in this district bearing in mind the opportunities available locally and sound as a result.

*Policy ESD 5*

91. A similar threshold of 100 units or more for an assessment is now included in policy ESD 5, regarding renewable energy. It is equally appropriate in principle, given the energy hierarchy in policy ESD 1 and the plan's strategic objectives. Again, suitable provisos would apply in respect of delivery and viability as well as a potential role for "allowable solutions", once defined. It clearly deals with different aspects of climate change mitigation from policy ESD 4 and therefore needs to be a separate policy in the plan, rather than being merged together, and is sound.

*Policy ESD 6*

92. Whilst it largely reflects national policy and guidance in the NPPF and the PPG, policy ESD 6 provides a full analysis of the approaches and specific measures necessary to manage and reduce flood risks in a district that has a high risk of flooding in some places. It is supported by detailed research on water issues in the SFRA levels 1 & 2, including in respect of informing the strategic site allocations (ENV 10, 15, 16, 17, 22PM & 23PM), and endorsed by the EA, as well as consistent with paras 99-108 of the NPPF and the PPG. It is therefore sound and appropriate in the plan.

*Policy ESD 7*

93. As part of the plan's treatment of water issues, policy ESD 7 requires the use of sustainable urban drainage systems (SUDS) for all development. This is justified locally by evidence from the SFRAs that all parts of the district are generally suitable for one form or another. The reference to the need to also protect water quality also helps to confirm that the policy is sound.

*Policy ESD 8*

94. In line with the Water Framework Directive, the Thames River Basin Management Plan and the EA's research confirming that Cherwell is in an area of serious water stress, policy ESD 8 suitably seeks to ensure that new development avoids adverse effects on the water environment, including in terms of quality.

*Policy ESD 9*

95. Policy ESD 9 deals appropriately with the protection of the Oxford Meadows SAC, the only site of European nature conservation importance in the district. This is in accord with the outcomes of the HRAs, including the appropriate measures recommended therein and especially in relation to groundwater flows and water quality, as well as para 113 of the NPPF.

*Policy ESD 10*

96. The biodiversity and natural environment of the district are sought to be protected and enhanced through policy ESD 10, including by seeking net gains and new resources from developments, as well as suitable mitigation of losses where the overall public benefits of the scheme outweigh the harm to the site. The policy is consistent with the NPPF, including paras 109 and 118, as well as being endorsed by both NE and the EA as sound.

*Policy ESD 11*

97. Where Conservation Target Areas have been identified to restore biodiversity and particularly priority habitats, appropriate surveys and reports will be required under policy ESD 11 in connection with developments in or adjacent thereto to identify constraints and opportunities for enhancement. This policy also accords with the guidance in the NPPF, including paras 109, 114 and 117, is supported by relevant local organisations and is sound.

*Policy ESD 12*

98. The Cotswolds AONB designation affects only a small part of the district around the village of Epwell, but nevertheless it is necessary to reflect the current AONB Management Plan of March 2013, as well as the NPPF, in a plan policy seeking to conserve its landscape and scenic beauty. Policy ESD 12 soundly achieves that objective.

*Policy ESD 13*

99. Policy ESD 13 seeks opportunities for enhancing the character and appearance of the landscape, particularly in urban fringe locations, as well as requiring new development to respect existing local landscape character, including by reference to the Oxfordshire Wildlife and Landscape Study. It is sound and consistent with the NPPF, including paras 17, 109 and 123, and the PPG.

*Policy ESD 14*

100. Policy ESD 14 relating to the OGB is dealt with under issue 13 jointly with Kidlington later in this report.

*Policy ESD 15*

101. Five purposes are listed for policy ESD 15, in addition to the initial requirement that all new development on the edge of a built up area must be carefully designed and landscaped to help assimilate it into the rural setting of towns. In particular, these relate to the definition of "green buffers" on the Policies Maps, whereby the Council seeks to retain the identity and settings of towns and villages, protect the landscape, gaps and views, prevent coalescence and help define limits to settlements.
102. Whilst strongly supported by some, notably parishes close to both Banbury and Bicester, this policy has been the subject of major criticisms from others. This is partly on the basis that it seeks to introduce an unnecessary and unjustified level of overall restraint on development in the defined areas, when other plan policies, such as ESD 13, are entirely suitable to protect those areas from inappropriate and/or harmful proposals in the countryside.
103. Notwithstanding its "evolution", including through the various iterations of the Green Buffers Reports (ENV 04 and ENV 07), which reviewed boundaries amongst other things, the policy effectively duplicates some of what is covered under policy ESD 13 (which is sound), notably in relation to the protection of local landscape character. Moreover, as modified, the last section of the policy is intended to make clear that it should not operate as an overall restraint on development, as some fear, but inevitably that is how it will be seen and

interpreted by many, bearing in mind the title and the designations on the Policies Maps, in practice.

104. Indeed, whilst the Council says that it is not intended to preclude development, the true purpose of the policy is questionable at best if that is not the case, given the duplication with other plan policies in relation to aspects such as the protection of important landscape features and heritage assets. The policy is also said by the Council to be about “place shaping” but, inevitably will be seen by those interested in the very long term future of both Banbury and Bicester as identifying by omission those areas which are not seen as worthy of protection from development and which will then be subject to development pressures that would be premature at best. To avoid this effective “pre-judgement”, it would be more appropriate for such important decisions to be taken at a time in the future if and when they actually need to be made and when all relevant factors and up to date evidence is available.
105. Furthermore, para B260a of the modified plan confirms that infrastructure provision in the green buffers is not excluded and that their boundaries may need to change following the allocation of new sites to meet the local needs of villages in LP Part 2. Sufficient land to meet the needs for both housing and employment to 2031 has been allocated in the plan, as modified, so no new strategic sites should need to come forward. Policy C15 of the adopted LP (TOP SD 31) will also continue to apply to help prevent coalescence between settlements, pending completion of the LP Part 2. In such circumstances, policy ESD 15 is unnecessary, as all the other relevant policies including ESD 13 which addresses some of the same matters should be suitable and sufficient in practice to protect vulnerable gaps between settlements from inappropriate development and avoid coalescence. Accordingly, it is unsound as submitted and as modified and should be deleted (**MMs 51 + 63**).
106. A reworded policy applying only to specific locations meeting the narrower definition of “valued landscapes” (para 80) and/or “areas of environmental or historic significance” (para 157) as defined in the NPPF, particularly around Banbury and Bicester, could be considered by the Council once the local needs of villages have been assessed to identify where development would be inappropriate, for inclusion in the LP Part 2.

#### *Policy ESD 16*

107. The built and historic environment of the area will be conserved and high quality design sought in all new development and is essential in the vicinity of the district's natural and historic assets under policy ESD 16. It is justified by relevant background evidence (notably in ENV 03, 05, 06 and 08), consistent with the NPPF, including paras 56, 58, 59 and 60, and supported by EH and NE. It will also be supplemented by more detailed design and historic environment policies in LP Part 2.

#### *Policy ESD 17*

108. The local importance of the Oxford Canal running north-south through the district is recognised in policy ESD 17, which properly seeks to protect and enhance it as a green transport route, tourist attraction, leisure facility and significant industrial heritage.

### *Policy ESD 18*

109. As part of sustainable development, policy ESD 18 seeks to secure an adequate network of green infrastructure across Cherwell, including the proposed country park to the north of Banbury (policy Ban 14), alongside policies BSC 11 and ESD 10, amongst others. It has the active support of NE as well as many other local organisations and accords with policies and guidance in the NPPF and PPG.

## **Issue 7 – Community Facilities and Green Spaces (Policies BSC 7 – 12)**

### *Policy BSC 7*

110. Policies BSC 7 – 12 focus on the provision of infrastructure necessary for sustainable development across the district, including education, health, public services/utilities, open space and community facilities. The requirements set out therein relate directly to the IDP (App 8) prepared jointly with OCC and accord with the guidance in the NPPF and PPG. In particular, policy BSC 7 on education, as modified by the Council (**MM 47**), now includes reference to new schools being provided in various locations, including at NW and SE Bicester and at Banbury, in addition to their identification in the strategic allocations.

### *Policies BSC 8/9*

111. In accord with para 171 of the NPPF, policy BCS 8 supports the provision of health facilities in sustainable locations, including the replacement of the Bicester community hospital, which is a local priority and underway. Policy BSC 9, as modified by the Council (**MMs 48-49**), also now refers to superfast broadband amongst the public services and utilities required for sustainable development. The clear necessity for additional burial space in both Banbury and Bicester to meet local needs is also acknowledged in the plan.

### *Policies BSC 10 -12*

112. Policy BSC 10 includes the protection of existing open spaces from loss to alternative forms of development, consistent with para 74 of the NPPF, as well as reference to existing deficiencies and the securing of new provision in connection with development. Consistent with para 73 of the NPPF, local standards for outdoor recreation are listed in tables related to policy BSC 11, based on the Green Space Strategy (LE 101), Open Space Update 2011 (LE 102) and Playing Pitch Strategy (LE 103). Indoor sport and recreation requirements, including for community halls in connection with major developments, are detailed in policy BSC 12, through defined local standards, with the Council now adding a reference to the existing deficiencies in Bicester as an additional/minor modification.
113. The Viability Study (PWE 02) and its update (PWE 03) provide further supporting evidence of soundness in that policies BSC 10 – 12 would not render new development schemes unviable, albeit the plan recognises that the standards may need updating in LP Part 2, with further details of implementation to be set out in a new Developer Contributions SPD. Accordingly, each of these policies is sound (with **MM 50** for clarity).

## **Issue 8 – Bicester Housing Sites**

*General*

114. Fulfilling its role in the overall strategy as one of the two most sustainable locations in the district, the plan focusses over 10,000 new homes on 5 strategic sites in and on the edge of Bicester by 2031. This will not only enhance its status as an economic centre but also help to attract new jobs, services and facilities to the town. It should also help to reduce growth pressures on Oxford city, to a degree, due to its location in the Oxford - Cambridge corridor with good and improving transport links, notably by rail.
115. The various iterations of the SA process, including the final submission report (SUB 04) and addendum (SUB 04A) confirm that the most sustainable options for new housing at Bicester have been identified in the plan and nothing that I have read, heard or seen during the examination process indicates otherwise. This includes in respect of the potential effects of development on each of the strategic sites in terms of landscape/visual impact, access/accessibility, biodiversity/ecological and cultural/heritage assets, coalescence with outlying villages/settlements, as well as flood risk and service provision.
116. The Council's evidence also demonstrates that all of the selected strategic sites for new housing in Bicester are viable and deliverable over the plan period (albeit Bic 1 may well continue to be developed beyond the plan period due to its overall size). Again, there is no firm evidence available that contradicts this conclusion. Accordingly, it is not necessary to consider in any detail any alternative or additional strategic scale site allocations to those identified in the plan, whilst those of a non-strategic scale are a matter for consideration in the Part 2 LP, should any further sites be necessary to meet needs over the plan period.

*Policy Bicester 1 – North West Bicester Eco-Town*

117. This scheme is well established as a major mixed use, zero carbon, development, including now for about 6,000 homes, on around 390 ha on the north western edge of the existing built up area of Bicester, having been previously identified as an eco-town location in the former national addendum to PPS 1. This presumably formed part of the justification for the recent government announcement of Bicester as a "Garden City", with potential public funding to assist with the delivery of new infrastructure, subject to value for money. Although progress since 2009 has been slow, work has recently commenced on site in respect of a phase 1 "exemplar" project.
118. Policy Bic 1 appropriately sets out detailed requirements to be met in respect of employment provision of mainly B1 uses, with limited B2 and B8, housing, including extra care and 30% affordable provision, as well as infrastructure needs and specific design principles. In particular, the height of new buildings, especially for any B2 and B8 uses, will also need to be carefully considered. However, in order to respond to market signals and provide some flexibility to encourage new investment and implementation, it would not be reasonable or appropriate to seek to restrict all employment development to B1 uses only.
119. Despite the inevitable loss of green fields and good agricultural land, around 40% of the site would be provided as open space, with small groups of woodland and existing hedges/trees retained if at all possible. It is essentially

common ground that these policy provisions are necessary to achieve the form and standard of development expected under the former eco-town concept. Furthermore, the viability evidence available is sufficient to demonstrate that they should be deliverable in practice, with sufficient "critical mass" to support the provision of necessary infrastructure and community facilities/services.

120. Since the plan's submission and with improving national and local economic conditions, the Council has acknowledged that the rate of new housing delivery on this important site is capable of proceeding more swiftly than envisaged earlier, enabling it to achieve a larger contribution to new housing needs in the town and district by 2031. Whilst challenging, this should prove possible once a number of house builders are operating on site. Consequently, a modification is required to increase the number of new homes expected during the plan period from 5,000 to 6,000 (**MM 67**).
121. Also, in the light of further work towards implementation, including in the context of specific planning applications for the first phases of the scheme, a number of other modifications are required to the policy for clarity, consistency with the NPPF and PPG and to better address understandable local concerns about the potential impacts of this major development on the town, notably in respect of traffic and transport.
122. These relate to a requirement for a Masterplan, as well as a minimum of 10ha of employment land, with a business park at the south east corner of the site, at least 3,000 new jobs from all sources over the plan period and a Carbon Management Plan for all employment developments (**MM 70**). Regarding new housing, in addition to the increased numbers, it is appropriate that Building for Life 12 and Lifetime Homes standards are met, as well as superfast broadband provided.
123. For infrastructure, the policy wording needs to be clarified in seeking primary and secondary school provision on site, a GP surgery, a 4 ha burial ground, indoor and outdoor sports facilities, plus an Energy Strategy and a Water Cycle Study, in addition to those requirements set out in the submitted policy. Concerning design, policy amendments/additions are also necessary relating to flood risk assessment, a programme of archaeological investigations, the maintenance of visual separation from outlying settlements (e.g. Bucknell and Caversfield), linkages with existing habitats and promoting the use of locally sourced building materials.
124. Importantly in the local context, as referred to above, a modification regarding the implementation of a Travel Plan, including to achieve a high level of public transport accessibility, as well as pedestrian and cycling facilities, is also essential. Subject to all of the above modifications (**MM 71**), the policy is sound and consistent with the NPPF and PPG. Moreover, it should materially assist in the delivery of a zero carbon scheme, as originally envisaged in the former eco-towns supplement to PPS 1.

#### *Policy Bicester 2 – Graven Hill*

125. 241 ha of predominantly brownfield former MOD land to the south of Bicester is allocated in the plan for mixed use re-development, including 2,100 homes and with around 2,000 jobs on 26 ha of the site, alongside the re-organisation

of continuing military operations at Arncott. The scheme would take advantage of the site's very good transport connections close to J9 of the M40, including rail links, as well as providing the opportunity for a new relief road on this side of the town. Given its sustainable location and the re-use of previously developed land, these proposals enjoy almost universal support in principle to help meet the growth needs of the town and the district.

126. This has been reinforced by the Council's recent acquisition of the site from the MOD, with the intention that part of the new housing should involve the largest "self-build" project in the country at present, in which considerable interest has already been expressed. The Council's evidence confirms that the implementation of policy Bic 2 is viable as currently envisaged, albeit rail access is not likely to be feasible until 2019 at the earliest.
127. Nevertheless, some changes are necessary to the policy wording to ensure soundness, clarity and consistency with the NPPF and PPG. These relate to requirements for biodiversity protection/enhancement measures, including protected species surveys, an archaeological evaluation, the provision of a buffer between the development and the sewage works, including a nature reserve, flood compensation works reflecting the flood risk assessment and protection of the character, appearance and setting of Langford Park Farm as part of landscape/visual and heritage impact assessments.
128. In addition, it is essential to make clear that contributions will be necessary to improve bus services and facilities locally, as well as pedestrian and cycle connectivity. Moreover, the evidence, including from the recent OCC transport studies and as considered at the hearings, is sufficient to confirm that a road alignment within the site to facilitate wider improvements to highways for this side of Bicester in the longer term is necessary, albeit completion of such a road may not be required in the plan period. Therefore, the words, "should it be required" also need to be deleted (**MMs 72-74**). With the above modifications, the policy is sound and deliverable.

*Policy Bicester 3 – South West Bicester (Phase 2)*

129. With a phase 1 (known as Kingsmere) already under construction, a further 29ha of land to the south west of Bicester is identified in the plan under policy Bic 3 as suitable for a further phase of mainly new housing development. It is within the town's peripheral road and viable and deliverable within the plan period, with low landscape sensitivity and ecological value in an accessible location relative to the town. Accordingly, this scheme constitutes sustainable development and would make a material contribution to meeting the needs of the town and district up to 2031.
130. Subject to necessary clarifications of the policy wording relating to the number of new homes (726, not 650), a convenience store rather than a local centre, bus routes and stops within the site, provision of a community woodland between the site and Chesterton village, and that the detailed scheme should be influenced by the flood risk assessment, as well as landscape/visual and heritage impact assessments, the policy is sound (**MMs 75/76**).

*Policy Bicester 12 – South East Bicester*

131. Land to the south east of the existing built up area of Bicester and beyond the

ring road is allocated for mixed use development in policy Bic 12. Whilst suitable in principle and in a relatively sustainable location on the edge of the town, it is adjacent to a Scheduled Ancient Monument (SAM) - the Wretchwick Deserted Medieval Settlement, and in the vicinity of the River Ray Conservation Target Area to the north. Therefore, for this major scheme to be sound, the policy needs to provide suitable and sufficient clarification relating to these important design and layout considerations, in addition to requiring that a route be provided for a future south east relief road around this part of Bicester, that would link into the similar provision on the Graven Hill site (Bic 2) to the south west, to provide a consistent policy approach on this matter.

132. In order to help meet the full OAN of the district the Council now proposes a significant increase in the size of this site from 40 to 155 ha, in the number of new homes from 400 to 1,500 and in the level of new jobs from 2,000 to 3,000, primarily in B8 uses, given the location and local demand, from that in the submitted plan. As a result, further modifications to the policy relating to a Masterplan, an Ecological Management Plan, retention of the northernmost part of the site free from built development, as well as providing links between areas of ecological interest, landscape/visual and heritage impact assessments and an archaeological field evaluation are needed for soundness (**MM 88**).
133. The policy also needs to ensure protection of the grade II listed Wretchwick Farmhouse, as well as the SAM and its setting, including through the provision of a landscape buffer. However, the exact nature and extent of that buffer is a matter for determination in the context of a detailed design and layout for the scheme, rather than predetermination in this policy. Furthermore, policy amendments to refer to improved pedestrian and cycle links, including to Bicester town centre, plus the protection of existing public rights of way and improved public transport services, including a through route for buses between the A41 and the A4421, are also necessary for soundness, as are contributions to secondary school provision and a mixed use local centre to serve new residents (**MM 88**).
134. It is only in the context of a Masterplan having been prepared that the details of the scheme in relation to the specific ecological interests of the site and its immediate surroundings can be resolved, rather than in a strategic plan. Similarly, any limited extension of the site, which might potentially assist in the resolving those issues, is a matter for either the LP Part 2 and/or a planning application, partly due to the non-strategic scale of the land involved.

*Policy Bicester 13 – Gavray Drive*

135. This area of largely flat land, bounded by railway lines to the north and west, the ring road to the east and residential development to the south lies to the east of Bicester town centre in a very sustainable location. Planning permission has previously been granted for new housing but that has now expired. In view of the need for additional sites to help meet OANs it is still considered suitable in principle to accommodate new development. However, the eastern part is now designated as a Local Wildlife Site, with the central/eastern sections containing lowland meadow; a BAP priority habitat.
136. Additionally, roughly a quarter of the site lies in Flood Zones 2 and 3 adjacent to the Langford Brook that runs north-south through the centre of the site.

The majority also lies within the River Ray Conservation Target Area. Nevertheless, even with these constraints, indicative layouts demonstrate that, taking into account appropriate and viable mitigation measures, the site is capable of delivering around 300 homes at a reasonable and realistic density not greatly different from that of the modern housing to the south.

137. In addition to necessary infrastructure contributions towards education, sports provision off site, open space, community facilities and public transport improvements, a number of other specific requirements are needed under policy Bic 13 for this proposal to be sound, in the light of current information about the site's ecological interests and environmental features. In particular, that part of the allocation within the Local Wildlife Site east of Langford Brook (just under 10 ha) needs to be kept free from built development and downstream SSSIs protected through an Ecological Management Plan prepared and implemented to also ensure the long term conservation of habitats and species within the site. Landscape/visual and heritage impact assessments and archaeological field evaluation are also required.
138. There must also be no new housing in flood zone 3 and the use of SUDs to address flood risks will be required. Subject to such modifications (**MMs 89-91**), policy Bic 13 is sound and would enable this site to make a worthwhile contribution to new housing needs in Bicester and the district in a sustainable location. This can be achieved without any material harm to environmental or ecological interests locally as a result of the various protection, mitigation and enhancement measures to be included in the overall scheme.
139. Requests that the developable area shown on the policies map should be reduced to avoid any development in the whole of the River Ray Conservation Target Area would significantly undermine this contribution. It would also potentially render the scheme unviable or at the very least unable to deliver a meaningful number of new affordable units, as required under policy BSC 3, when all other necessary contributions are also taken into account. Moreover, it could well materially reduce the potential for the scheme to contribute to enhancement of the Local Wildlife Site's ecological interest as part of the total scheme, thereby effectively achieving the main objective of the Conservation Target Area. Consequently, it would not represent a reasonable, realistic or more sustainable alternative to the proposals set out in the plan, as modified.
140. Similarly, despite the historic interest of parts of the site in terms of their long established field patterns and hedges, this does not amount to a justification for the retention of the whole of the land east of the Langford Brook as public open space, nor for its formal designation as Local Green Space. This is particularly so when the scheme envisaged in the plan should enable the more important LWS to be protected with funding made available for enhancement at a time when the lowland meadow habitat is otherwise likely to deteriorate further without positive action. Such an approach would be capable of ensuring no net loss of biodiversity as a minimum and also compliance with policies ESD 10 and 11 as a result.
141. All in all the most suitable balance between the need to deliver new housing locally and to protect and enhance environmental assets hereabouts would essentially be achieved through policy Bic 13, as modified, and the land's allocation for 300 new homes on approximately 23 ha in total, given that the

requirements of policies ESD 10 and 11, including to achieve a net gain in biodiversity arising from the scheme as a whole, can also be delivered as part of an overall package of development with appropriate mitigation measures.

## Issue 9 – Bicester Other Sites

### *General*

142. Alongside the major housing growth, the plan allocates sustainable sites for significant growth in employment provision in Bicester, as well as for related infrastructure, facilities and services. In total, this should help to create a more varied employment base, reduce the current level of out-commuting and also accommodate some of the growth pressures on Oxford city, given the proximity and improving transport links.

### *Policy Bicester 4 – Bicester Business Park*

143. To the south of the town centre and with good access to J9 of the M40 via the A41 to the west, the extended site of almost 30 ha provides a sustainably located opportunity for a principally B1a use (office) business park that is capable of delivering up to 6,000 jobs. Taking into account existing permissions, there are no material constraints to early delivery or that affect overall viability.
144. Given the flexibility demonstrated by the Council in accepting some alternative uses to help bring forward the overall scheme and the allocations elsewhere in the plan, there is no justification for changing the policy to permit further retail and/or leisure uses on the site. Subject to amendments reflecting the need for landscape/visual and heritage impact assessments of specific proposals and to fully take account of flood risks, as well as for improved walking and cycling connectivity, the policy is sound, as modified (**MM 77**).

### *Policy Bicester 5 – Bicester Town Centre*

145. The plan seeks to improve the town centre by providing a wider range of retail, commercial and leisure facilities to better serve the growing population, including through redevelopment schemes, increased car parking and complementary, rather than competing, retail growth at the nearby Bicester Village Retail Outlet Centre. However, pending completion of the on-going Bicester Masterplan, that is being produced on a collaborative basis with local interests, such as the Town Council, any changes to the town centre boundary or the primary shopping frontage are deferred to the LP Part 2.
146. Consequently, only an "Area of Search" for potential future town centre related development is defined in this plan, which includes Bicester Village and the land between it and the existing town centre. In the absence of any urgent need for any additional convenience retail floorspace over and above that already committed in Bicester, albeit there is a need for more comparison stores, it is not unreasonable for further such prospects in and around the town centre to be addressed in this way at present.
147. Nevertheless, for soundness, it is necessary to clarify that residential schemes, including as part of mixed uses, are acceptable in principle in the town centre except where they would result in the loss of sites for retail or other main

town centre uses. Also for improved certainty and to facilitate implementation, the role of Bicester Village in relation to the town centre and the requirements that would apply to any proposals for further retail growth there, including in respect of better connectivity between the two areas, need to be made clear in the supporting text (**MM 78**).

148. Bearing in mind its inclusion within the "Area of Search" and due to the present level of uncertainty about the prospects of delivery, the realistic potential for a new Town Park on land at Pingle Fields, between Bicester Village and the town centre, remains unclear. Accordingly, the reference in the plan to that proposal should be deleted and the matter more fully assessed in the context of the emerging Masterplan and LP Part 2 process, including in terms of economic viability and practical implementation (**MM 78**). This includes in respect of any proposals for the relocation and redevelopment of the existing sports pitches on the Oxford Road site. With these modifications the policy is sound.

*Policy Bicester 6 – Bure Place*

149. The completion of phase 1 of this redevelopment scheme, including a new supermarket, cinema, car park and bus interchange, should make a significant contribution to the regeneration of the town centre as a whole. It also facilitates phase 2 to provide new civic buildings, including a library, to create a public focal point in the centre of Bicester and thereby strengthen its functions as a growing market town and new "Garden City". Subject to deleting the outdated reference to phase 1 (**MM 79**), the policy is sound.

*Policy Bicester 7 - Open Space, Sport and Recreation*

150. The Council's evidence clearly demonstrates that there are obvious shortfalls in the present provision of allotments, parks/gardens, sports pitches and other green spaces in Bicester, which this policy seeks to address, together with the identification of specific locations in the Masterplan and LP Part 2. These measures include a community woodland, an urban edge park providing a circular route around the town, linked to the delivery of other site allocations, and the use of Stratton Audley (Elm Farm) Quarry for informal outdoor recreation that is compatible with its designation as a LWS and partial SSSI.
151. The latter is subject to a partly implemented permission for infilling to form a country park. Nevertheless, none of the above need necessarily involve the loss of or materially constrain continuing use for angling, particularly given existing ownership and tenancy arrangements, or gliding activities on the adjacent Bicester Aerodrome (see also Bic 8). Any specific proposals would be a matter for the Masterplan and/or LP Part 2 and thereby subject to public consultation. The policy itself requires only updating (**MM 80**) and is sound.

*Policy Bicester 8 – Former RAF Bicester*

152. To the north east of the ring road on the edge of the built up area of the town, this extensive former military area is identified in the plan for tourism related but conservation led commercial redevelopment. This process is already underway through the restoration and re-use of many of the inter-war former RAF buildings at the western edge of the site, many of which are listed and/or scheduled. This is helping to secure the future of the former Technical Site

and the Flying Field to the east in the context of the site's designation as a Conservation Area and with an extensive LWS on most of it. The Flying Field is used by a well-established gliding club that makes a positive specialist contribution to the range of recreational facilities available in the locality.

153. Together with the recently installed but already successful "heritage engineering" operations in the restored buildings, the site is well on its way to fulfilling the objectives of the 2009 Planning Brief. The evidence of what has already been provided on the site confirms that the proposals are viable and deliverable. Subject to deleting references to, first a museum for Bomber Command that now seems unlikely to proceed, and the qualification regarding the long established gliding activities on the site (**MM 81**), the policy is sound.

*Policy Bicester 9 – Burial Site Provision*

154. This policy confirms the urgent local requirement for a new burial site of around 4 ha in Bicester. It is consistent with the current expectation that it can be provided as part of the policy Bic 1 scheme, with funding contributions from other housing developments in the locality to help secure delivery. The evidence of need is clear and unquestioned and therefore policy is soundly based and requires no modifications.

*Policy Bicester 10 – Bicester Gateway*

155. South of the town and east of the A41, 18 ha of land is allocated for new employment development to provide up to 3,500 new jobs in a prominent "gateway" location between the town and J9 of the M40. It is intended to provide a major opportunity for high tech employment uses in high quality buildings with good transport links. As at Bic 4, this should prove suitable for companies and investors seeking sites in the "knowledge economy" spine or corridor(s) between Oxford and Cambridge and Oxford and Northampton. Given the planned growth in the local economy and the national recovery from the recent recession, this allocation is soundly based, likely to prove attractive to the market and deliverable over the plan period. It should help to reduce out-commuting from Bicester and some of the pressures for other sites elsewhere in the corridor, particularly in Oxford.
156. For soundness and consistency with other parts of the plan, policy wording changes are necessary to add references to the safeguarding of land for future highway improvements to routes around Bicester, improved walking and cycling links, the provision of a natural wetland buffer between the site and adjacent nature reserve, amongst other things, and taking full account of the flood risk assessment for the site, including that no built development will be permitted in flood zone 3b (**MMs 82-84**). Subject to the above modifications, the policy is sound and the scheme viable and deliverable, with mitigation measures for the protection of Alchester Roman Town SAM to the south. In addition, the Council proposes to amend the Policies Map to facilitate the development of a hotel on the site frontage as a part of the overall scheme.

*Policy Bicester 11 – Employment Land North East Bicester*

157. On the north eastern edge of the town and to the south east of the former RAF Bicester (Bic 8), 15 ha of greenfield land is allocated for mixed employment, B1, B2 and B8, uses and expected to provide up to around 1,000 new jobs. It

has good transport links, including on the main road network, and is close to other existing and proposed employment locations in and around the town. The presence of a SAM on the former airfield to the north and a Conservation Area on land to the north east, as well as the possible influence of any high B8 buildings on gliding activities on the flying field to the west, all indicate that the north/north eastern boundary of the allocation has been suitably identified on the Policies Map and should not be extended. Bearing in mind the number and scale of other suitable sites in the plan and the absence of any urgent or overriding need for further greenfield land allocations to meet the employment needs of the town or district, there is no clear justification for any further extension of the site at present.

158. However, with careful design, including in respect of the height of new buildings, and suitable landscaping, the allocated site is capable of being sustainably developed to help balance the town's need for new jobs with that for new housing, without material harm to the heritage assets, including the SAM, the continuing activities, including gliding, or the recently established commercial operations at the former RAF Bicester. This is based on modifications to the policy to confirm that any scheme must conserve or enhance the setting of the RAF Bicester Conservation Area and the SAM, with the preparation of an archaeological and cultural heritage assessment informing proposals, as well as landscape/visual and heritage impact assessments.

159. In addition, the design and layout needs to take account of a flood risk assessment for the site, particularly in respect of the Langford Brook, with no built development in flood zone 3b, amongst other things, the retention of existing mature trees and hedgerows, improved walking and cycling links, consideration of potential ring road improvements and the establishment of a planted area around a care home that has recently been constructed on the site frontage. Subject to these modifications (**MMs 85-87**), the policy is sound. The exact definition of the site's eastern/south eastern boundary, including in relation to flood risks, is a detailed matter for the Council to consider in the context of any specific proposals that may be submitted.

## **Issue 10 – Banbury Housing Sites**

### *General*

160. As the largest town, housing growth totalling around 7,000 new homes is sustainably focussed on Banbury, mainly on a number of peripheral greenfield sites and balanced by other development, notably for employment but also in services and facilities. The following sites are all intended to facilitate this growth, including in respect of the town's overall economy and its important role as a market town/service centre for a wide rural area, not all of which lies within Cherwell district.

### *Policy Banbury 1 - Canalside*

161. On land between Banbury town centre and the rail station, the plan identifies a site of about 26 ha for mixed use redevelopment to include now about 700 new homes (rather than 950, as submitted), including around 30% flats, together with commercial uses on the northern part and limited B1a class

offices. As a large complex project, the costs of delivery are expected to be higher than for most other allocated sites, but the Council's evidence, including the site specific Viability Study of Sep 2013), indicates that it would be viable over the plan period, albeit with a likely later start date and a lower total of new homes than originally envisaged.

162. Given the need to relocate a number of existing small and medium sized enterprises and to reorganise multiple services and facilities, this is inevitable, but it does not invalidate the proposals or render them unsound, particularly given the wider public benefits that should arise from the completed project in this highly sustainable location. Therefore, with policy additions to refer to education contributions, flood risks, landscape/visual and heritage impact assessments, as well as to provide clarity on the intentions for relocating and/or reorganising existing businesses (**MMs 95/96**), the proposals are sound.

*Policy Banbury 2 – Hardwick Farm, Southam Road (East and West)*

163. In a sustainable location on the northern edge of the existing built up area of the town about 32 ha of land, principally on the eastern side of Southam Road, and bounded by the M40 on the north east, is allocated for new housing for around 600 new homes. Planning permission has been granted by the Council. Subject to clarifications and an additional reference to secondary education contributions being required (**MMs 97/98**), policy Ban 2 is sound in principle as the scheme is viable and deliverable.
164. However, on the western side of Southam Road where the land rises quite steeply to the north, the Council now intends that development should be limited to the southern/south eastern parts of the site and to no more than 90 new homes. This is to minimise the potential harmful effects of new buildings on the landscape of the locality, including in long distance views across the town from the south. This reflects the conclusions of the 2013 Landscape Study (ENV 05) that identified low capacity in the western part of the site to accept new built development in landscape impact terms, due largely to the existing character of the rising ground and its wider visual prominence. This represents a change from the submitted plan by the Council, which indicated that around 42 ha in total and thus a further 11 ha or so of the rising ground west of Southam Road, was considered suitable for development originally.
165. In terms of housing need, the plan now makes sufficient provision on strategic sites to meet the district's overall requirements for the plan period. It also makes full and suitable provision on the deliverable sites in and around the town, including this one, to enable it to make an appropriate contribution to those needs. Thus, there is no overriding necessity to find more sites or to extend allocations to meet these needs, in the short to medium term at least.
166. Moreover, taking into account conflicting assessments of the site's intrinsic landscape qualities and the wider positive contribution made by the higher, rising, open slopes west of the road to the landscape setting of the town, including when seen from some distance away to the south, the evidence is neither convincing nor compelling that the Ban 2 policy/proposal would be unsound if it did not include the larger site area west of Southam Road.

167. The ability of the higher slopes to satisfactorily absorb more new housing in landscape impact terms could be re-examined, together with the position of the northern boundary, whether defined by a contour limit or otherwise, once the 90 or so homes on the lower slopes have been completed in accord with this policy. Nevertheless, there is no clear justification for requiring it to be further modified now, as local needs are being met in full elsewhere and the extended site would not be a clearly preferable alternative in sustainability terms to those selected due to the identified landscape impact. No further modifications are therefore necessary.

*Policy Banbury 3 – Land West of Bretch Hill*

168. It is essentially common ground that approximately 14 ha of land west of Bretch Hill is viably, suitably, and sustainably capable of accommodating and delivering around 400 new homes, with all necessary services and facilities. All the available evidence confirms that the policy and its detailed requirements are sound.

*Policy Banbury 4 – Bankside Phase 2*

169. To the south east of Banbury at Bankside east of the A4205 an urban extension of around 1,000 new homes, known as Longford Park, as well as an employment area and a large park has been permitted and is now under construction. In the light of the significantly increased level of district need, the Council now considers that a further 27 ha to the south east is capable of providing another 600 or so homes and also suitable for development as Phase 2 of this scheme. The fact that it comprises mostly grade 2 land in agricultural quality terms ("best and most versatile") does not invalidate that choice in this particular case, as it is largely free of other constraints such as flood risk, ecological interest or potentially harmful landscape/visual impact and in a generally sustainable location.
170. In particular, it provides an opportunity for sharing infrastructure with Phase 1, improving the viability of both, as well as enhancing the scale and range of services and facilities, so as to create a more sustainable and self-contained new community on this side of the town. In addition, the larger scheme should enable the relocation of Banbury United FC from their present ground within the Canalside site (policy Ban1) and the implementation of that policy, with its wider public benefits for the town, as well as policy Ban 12 (see below) on land to the south. In respect of potential effects on the village of Bodicote on the opposite side of the A4205, due to the location south of Phase 1 and with only a short road frontage, this is likely to be less than that associated with the permitted scheme and, subject to detailed design and layout, not materially harmful in principle, including in terms of traffic generation.
171. The details of density and thus the exact total of new houses are best addressed in the context of specific proposals, rather than this LP policy. Subject to clarifications of area figures, numbers of dwellings, requirements for vehicular, cycling and walking links to the Ban 12 site, as well as further afield, flood risks and archaeological evaluation (**MMs 99-101**), the proposals are viable and deliverable and the policy sound.

*Policy Banbury 5 – North of Hanwell Fields*

172. 26 ha of land on the north western edge of the town is identified for new housing, with 544 new units currently expected to be provided following a Council resolution to approve part, together with necessary infrastructure, that in this case includes green links beyond the site. The location involves extending the town into presently open countryside to the north of Dukes Meadow Drive, a recently built development spine road running east/west, albeit retaining a sufficient distance of about 500m from the village of Hanwell to the north (and about 400m from the southern boundary of its CA) to ensure that the setting of its CA is preserved, coalescence does not occur and that Hanwell would retain its separate identity.
173. Nevertheless, this relationship means that particular care is needed in the design and layout of the scheme, as well as in respect of peripheral landscaping and new planting, including regarding the heights of new buildings and outdoor lighting, as required in policy Ban 5. With the addition of references to flood risks, landscape/visual and heritage impact assessments, as well as the clarification of numbers (**MMs 102/103**), the proposals are reasonable and realistic and the policy sound.

*Policy Banbury 16 – South of Salt Way West*

174. To the south of Salt Way and west of the A361 Bloxham Road, the Council has identified one of four additional housing sites to help meet the OANs of the district, beyond those allocated at submission stage. This one is capable of delivering up to 150 new homes on a total of 8 ha, whilst protecting the historically important route of the Salt Way along its northern boundary and the slopes of Crouch Hill further west, a topographical landmark. The local value of Crouch Hill was acknowledged in the 2013 Landscape Study (ENV 05) as including the slopes and setting, as well as the summit. Also taking into account the presence of other heritage and ecological assets nearby, including Crouch Farm and Wykham Park Farm, both listed, there is no clear justification for extending the boundaries of this site, either to the west up the quite prominent slopes of the hillside, or to the south along the road frontage, thereby expanding the built up area of the town further than is strictly necessary into otherwise largely open countryside.
175. Overall, new housing, together with necessary services and facilities is viable and deliverable in this relatively sustainable location on the edge of the town. Subject to clarifications relating to secondary school places, bus stops, archaeological evaluation and landscape/visual and heritage impact assessments (**MMs 116-118**), the proposals and the policy are sound.

*Policy Banbury 17 – South of Salt Way East*

176. In common with Ban 16, this major site of around 68 ha to the south of the Salt Way and capable of providing approximately 1,345 homes as a new neighbourhood, is now allocated by the Council to meet the district's needs in a sustainable location on the southern edge of the present built up area. Land at the north west corner of the overall site has recently been granted permission for 145 dwellings. Despite differing land ownerships, the area is capable of being developed on a comprehensive basis in accordance with a masterplan, including an east – west link road, with a roundabout off the A361, for local traffic and as a bus route to join White Post Road at its eastern

end. This is properly and logically required by the policy to ensure effective implementation of the proposals and avoid harmful impacts on the local road network, including Wykham Lane.

177. The relative proximity of the western edge of the land to the Tudor Hall School site is such that both the Council and the prospective developers acknowledge the need for creating a "soft edge" to the scheme in this locality, to ensure that an appropriate relationship is established. However, the suggestion that the policy should require that there be no new built development on the westernmost field is not reasonable or realistic in the context of a strategic site allocation in a LP Part 1, particularly when the full details of appropriate access arrangements and necessary infrastructure provision have yet to be finalised. Therefore, this is a matter of detail to be resolved as part of specific proposals, taking into account the topography and potential mitigation measures, including peripheral planting and landscaping.
178. Again as with Ban 16, the scheme needs to protect and, if possible, enhance the route of the historic Salt Way on its northern boundary, as well as providing a new footpath/bridleway across the full length of the southern boundary. Moreover, as now indicated by the Council on the proposed amendments to the Policies Map, the scheme also needs to provide further recreational space on the southern edge of the site. This is in order to make suitable overall provision and provide reasonable and practical separation between the new development and the village of Bodicote to ensure that its separate identity is not lost and that for the new community, which will have its own local centre, more easily created. With firm developer interest in early delivery, as evidenced by the permission on part, the scheme is viable and the policy sound, subject to important clarifications in respect of secondary school provision, the delivery of the A361 to A4260 link road and archaeological features, plus landscape/visual and heritage impact assessments (**MMs 119/120**).

*Policy Banbury 18 – Land at Drayton Lodge Farm*

179. West of Warwick Road (B4100) this site adjoins the Ban 5 allocation east of the road and also land to the south that has recently been granted permission for new housing, in an urban fringe location. At approximately 15 ha it is considered capable of providing around 250 new homes, together with necessary infrastructure, albeit part of the central section contains some existing dwellings and a copse that should be retained. The caravan park and golf course formerly on the site have recently closed for viability reasons.
180. Given the relative proximity to the village of Drayton and the setting of its CA to the south west, there is no clear justification for extending the allocation onto adjoining land in the absence of any further need for new housing sites in Banbury at present. Subject to clarifications for effectiveness in respect of secondary school places, bus stops and archaeology, plus landscape/visual and heritage impact assessments, the policy is sound and the prospective scheme realistic and reasonable in all principal respects. However, the reference to "contaminated land" in the supporting text needs to be deleted as no evidence exists to justify this statement (**MMs 121/122**).

*Policy 19 – Land at Higham Way*

181. A relatively small allocation of 3 ha for new housing close to the town centre has been added into the plan by the Council to reflect the recent availability of this former waste management facility and concrete batching plant in a highly sustainable location next to Banbury rail station. Considered capable of viably delivering around 150 units in total, the scale and nature of the site is such that it is likely to provide mainly smaller homes, including a significant proportion of flats, and thus some greater variety in the size and type of new housing in the town over the plan period. Whilst there may be scope for more than 150 units, this is entirely dependent on the detailed design, layout and mitigation measures proving acceptable in relation to all of the above factors.
182. Subject to detailed considerations in design and layout terms reflecting the proximity to the river and canal in respect of flood risks and the rail lines/station regarding noise/disturbance, as well as ground conditions acknowledging the site's previous uses, this redevelopment of a central brownfield site is entirely appropriate in principle (**MMs 123/124**). The policy is sound in all its requirements for the scheme, including those listed above.

### *Conclusions*

183. As confirmed in the SA (SUB 04) and the SA Addendum (SUB 04A), which considered realistic alternative options, all of the strategic new housing sites allocated in Banbury (as in Bicester), including those added by the Council through the proposed modifications, are considered to be sustainable, including in respect of their locations. Moreover, there are no known "showstoppers" preventing implementation, including in terms of necessary infrastructure provision, in any case. Similarly, whilst Ban 1 – Canalside is more marginal at present and likely to start later as a result, all are also demonstrably viable (PWE 01) with most having direct developer involvement and many having permission in whole or in part, thereby adding positively to conclusions on reasonable delivery prospects.
184. In such circumstances, and again as in Bicester, it is not therefore necessary to identify any extra or further extended sites to meet local needs for new housing in Banbury over the plan period, as things stand. Accordingly, those additional locations put forward by representors, including land north of Dukes Meadow Drive, next to Ban 5, south of Bodicote (Cotefield Farm) and adjacent to Ban 3 at Dover Avenue/Thornbury Drive, are for potential consideration in the LP Part 2, if appropriate, and/or when the plan is reviewed, if required. However, no further modifications are needed in this respect as none would represent more sustainable alternatives to the selected allocations.

## **Issue 11 – Banbury Other Sites**

### *General*

185. To complement the new housing proposed, the plan also identifies a number of sites for employment, as well as for related services and facilities, in Banbury. Together, they should ensure that the town's growth takes place on a sustainable basis over the plan period, taking into account the guidance in para 17 of the NPPF, the positive market signals in the 2014 Employment Analysis update (ECO 12PM) and relevant physical constraints, such as topography and the route of the M40 motorway.

*Policy Banbury 6 – Employment Land West of M40*

186. Taking into account recent job losses in the town, Banbury retains the largest supply of employment land in the district and a strong manufacturing sector. Therefore, to secure the long term supply of employment land locally, a strategic site in a sustainable location fairly close to the town centre has been identified near to J11 of the M40. Permissions have already been granted for a mix of B1, B2 and B8 uses on most of a total of about 35 ha, that is anticipated to provide around 2,500 jobs. All the available evidence indicates that the scheme is viable and deliverable, with good links to the town centre.
187. Notwithstanding, it is necessary to ensure that the policy provides full guidance for a decision maker in respect of any further proposals for this area. In particular, this requires a reference to reserving land for a new road connection through the site to enable traffic to by-pass the town centre, which is already a condition of the recent planning permission. However, to avoid uncertainty, this should not be made subject to future consideration by the Highway Authority alone and rewording is required accordingly (**MM 105**).
188. The policy also needs additions referring to footpath connections, contributions to bus service improvements, taking full account of the flood risk assessment for the site and the deletion of the restriction on all built development south of the dismantled railway line, which is not strictly justified (**MM 106**). Subject to these modifications, the proposals and policy are both sound, with reasonable prospects of delivery.

*Policy Banbury 7 – Banbury Town Centre*

189. This policy seeks to strengthen the town centre, confirming that shopping leisure and other “main town centre uses” will be supported there. However, to achieve its objectives and for clarity, it also needs to encourage mixed use schemes and acknowledge that residential development will also be acceptable in appropriate locations that do not lead to the loss of retail or other “main town centre uses”. Otherwise, with modifications (**MM 107-109**), the policy is sound, including in respect of the definition of an “Area of Search” for a potential future expansion of the defined town centre boundary, to be assessed in detail in LP Part 2.

*Policy Banbury 8 – Bolton Road Development Area*

190. A mixed use area at present, incorporating car parks and service areas for commercial units, plus historic outbuildings, this 2 ha site is considered suitable, in principle, for redevelopment. Given its location west of the Castle Quay shopping centre and north of Parsons Street, it is capable of providing some larger shop units suitable for modern retail operations, as well as around 200 new homes, a hotel and leisure facilities, with replacement car parking. Accordingly, this potential needs to be recognised in the policy, including through references to high quality design in a conservation area, contributions to education, archaeological investigations and flood risks close to the River Cherwell and Oxford Canal. Subject to the above modifications (**MMs 110-112**), the proposals are reasonable and realistic and the policy is sound.

*Policy Banbury 9 – Spiceball Development Area*

191. 5 ha of land between the River Cherwell and the Oxford Canal with an Arts Centre and the town's Museum is well placed to accommodate an extension of the town centre. This policy reasonably expects it to provide for both new retail and leisure uses, as well as a hotel, library and car parking, including to strengthen the night time economy of the town and improve links with the existing centre. The available evidence indicates that the scheme is viable and realistic with firm developer interest in early implementation and the policy is therefore sound.

*Policy Banbury 10 – Bretch Hill Regeneration Area*

192. It is common ground that this policy for the co-ordinated regeneration of an area in the west of the town, which currently has relatively high levels of deprivation on a number of indices, is sound and consistent with para 69 of the NPPF.

*Policy Banbury 11 – Open Space, Sport and Recreation*

193. In common with the similar position in Bicester (Bic 7), the Council's evidence shows clearly that the present provision of allotments, parks/gardens, sports pitches, indoor sports facilities and other green spaces in Banbury is inadequate for current needs, let alone future growth. Accordingly, together with policies BSC 10 – 12, this policy seeks to rectify the situation over the plan period, including by integrating provision with the planning of strategic development sites. It also includes the intention to establish a series of linked open spaces based on the canal and river and a linear park from the north of the town to Bankside. In all of the above circumstances, the policy is sound.

*Policy Banbury 12 – Relocation of Banbury United FC*

194. In line with the above and to facilitate the implementation of the Canalside regeneration project (Ban 1), Banbury United FC, a long established club that provides important local facilities and sporting opportunities, needs a new home ground. Accordingly, land to the south of the existing Banbury Rugby Club has been identified as suitable and available.

195. The evidence of need is clear and the site is in a relatively sustainable location on the southern edge of the town, with bus services along the A420 and sufficient distance remaining between it and the village of Adderbury to ensure that no real risk of coalescence would arise. It is also separated from the village of Bodicote by the main road and adjoins an existing sports ground. Accordingly, I endorse the Council's choice that this is the best relocation site of the many originally considered.

196. Subject to policy and text additions (**MMs 113/114**) confirming that the scheme needs to take vehicular access from Oxford Road only and that that part of the 16 ha of land not needed for football use is allocated for a new secondary school to serve the town, with some shared facilities if at all possible, this proposal should prove to be deliverable within the plan period and the policy is sound.

*Policy Banbury 13 – Burial Site Provision*

197. This policy confirms the local requirement for new burial site provision in

Banbury with contributions from major new housing schemes to provide funding to facilitate an extension to the existing cemetery, subject to suitable ground conditions being demonstrated. The evidence of need is unquestioned and therefore policy is soundly based and requires no modifications.

*Policy Banbury 14 – Cherwell Country Park*

198. Around 33 ha of land, including the earth embankments of the Banbury flood alleviation scheme, east of the M40 and north of the town, are identified in the plan to provide a new country park. Other components of the scheme include a visitor car park off the A361, new woodland planting to augment Wildmere Wood and a network of new and improved walking routes. The Council's intentions and aspirations for this project are clear and deliverable, and it will make a significant contribution to the implementation of policy Ban 11 (see above). Accordingly, the policy is sound.

*Policy Banbury 15 – Employment Land NE of J11 M40*

199. For the reasons outlined above in relation to the increased growth in new housing in the district and in Banbury, the Council has now proposed the allocation of a new strategic employment site east of J11 of the M40, either side of the A361, totalling around 49 ha. This could be brought forward in phases, with the first on 13 ha land, bounded by the M40 motorway to the west, the A361 to the east and a firm hedge line to the north, which could be readily reinforced with strategic scale planting.
200. In this area the land is also fairly flat and new employment buildings would be largely seen in the context of the motorway in public views from the east, north and south east, with some large existing buildings beyond. This contrasts strongly with the rising ground to the east of the A4225, which is also principally open agricultural land but clearly of a higher landscape sensitivity to new built development, including the land below the higher slopes of the hill in the easternmost part of the overall site.
201. Development of the land east of the A361, as noted in earlier landscape assessment work for the Council (2013), would have a significantly detrimental impact on the local landscape, intruding as it would into presently open countryside currently in agricultural use with inevitably large industrial and warehouse buildings. In particular, it would materially extend the built up area of Banbury to the east and lead to a significantly harmful erosion of its rural setting on this side of the town.
202. Given the recent approval for DIRFT III, relatively close to Banbury at Daventry, which provides major strategic opportunities to meet the local and regional needs for new B8 floorspace and has the great advantage in sustainability terms in comparison with this site of being rail related, the likely requirement for further employment floorspace, including towards the end of the plan period, is reduced. Moreover, there are acknowledged barriers to delivery of the whole Ban 15 site at J11, including that the traffic movements likely to be generated would trigger the need for the new South East relief road through the town.
203. In addition, for the whole site to be developed as a mainly road based B2/B8 employment scheme, major contributions are likely to be necessary to other

transport and highway improvements, especially to the motorway junction itself. There is no clear evidence that an acceptable programme of works could viably and practically be delivered, taking into account the impacts of other developments committed in the plan.

204. However, a scheme of materially reduced scale, from 49 ha to 13 ha only, limited to land west of the A361, would be far less likely to give rise to significant traffic generation impacts going north into Northamptonshire towards Daventry, on the A422 travelling east, including at Farthinghoe, or "rat running" on the B4525 through Middleton Stoney, given that only 10-15% of total future traffic movements are expected to use those routes, rather than the M40.
205. Moreover, development of the whole 49 ha site, especially for very large B8 uses, might well provide direct competition to DIRFT to the detriment of the delivery of both, potentially also discouraging the increased transfer of freight to rail. Some doubts also remain regarding the delivery of other services and infrastructure requirements in connection with the full scheme. In contrast, a smaller scheme, limited to the land west of the A361, is likely to prove viable in the first part of the plan period, without the need for significant highway improvements, not least for the SE Relief Road to be brought forward much sooner, according to the HA, OCC and the scheme's promoters.
206. In the light of the above, only the land west of the A361 should be allocated for new employment development in the modified plan and none of that to the east of the road, even as a strategic reserve site. This would have the considerable benefit of reducing the very harmful landscape and potential environmental effects of the wider scheme on a main entrance to the town from the north, south east and east, as well as that on the largely rural landscape of the locality.
207. Bearing in mind that logistics operators seeking large sites in this area have the alternative of a major rail connected facility at DIRFT nearby, that has good road links to the M1, there is insufficient justification in the evidence for the allocation of the whole 49 ha of this site at present. However, a lesser scheme limited to the firm defensible boundaries provided by the M40 and the A361 could be viably delivered on the western part of the site only, in the short to medium term. This should ensure that sufficient new land is available to meet largely non-strategic B2 and B8 use needs arising from within and/or related to the Banbury area and its local economy.
208. Subject to appropriate design and layout incorporated within a suitable master plan, as required by new policy Ban 15, employment development, principally for B2 and B8 uses, at this location would represent the most sustainable means of providing the necessary additional employment land supply for the town and district. For example, it would have reasonably good transport links with the town, including by walking and cycling, including through the existing underpass beneath the motorway, and with opportunities to improve bus services at reasonable cost. Furthermore, peripheral landscaping and green spaces within the site should also reduce the potential impact on the rural areas to the north and east, including from along the approach roads, to an acceptable level in landscape and visual terms.

209. Although various alternatives have been put forward for strategic scale employment sites, including in relation to other M40 motorway junctions, none is a realistic or more sustainable location for this plan period, given doubts over deliverability, including regarding transport implications, especially for the strategic road network. Additionally, some are of insufficient size to be properly considered as strategic scale allocations (e.g. land off Hennef Way), whilst others are less well linked to existing communities and would represent an even greater intrusion of built development into the otherwise largely rural countryside, such as at Ardley.
210. Moreover, there are reasonable prospects that the new jobs total in the modified plan, related to the revised housing needs, can be achieved without the allocation of the larger site being required. Firstly, the existing land supply will be significantly augmented by the other allocations in the plan, with most likely to be available in the short to medium term at least. In addition, there are other deliverable opportunities for some smaller, non-strategic scale, sites to come forward in sustainable locations within or adjacent to the present built up areas of the towns in the LP Part 2. Finally, there are job opportunities likely to come forward in the non B class uses, such as retail and in the public and service sectors associated with the new housing growth.
211. With this significant reduction in scale, the new policy and allocation would be sound in principle. Other changes to policy wording are also necessary for soundness and clarity, including deleting the reference to contributions towards the new SE Relief Road and replacing it with a requirement for improved bus services, with consequential ones throughout the plan, to reflect the smaller size of the allocated site (**MM 115**).

## **Issue 12 – Villages and Rural Areas (Policies Villages 1 – 5)**

### *General*

212. The plan's overall strategy sustainably focusses most new development on the two towns of Bicester and Banbury, with about 5,400 new homes in the rural areas, including at Kidlington and the former RAF Upper Heyford to 2031. This is clearly the most sustainable strategy for the district over the plan period and reflects the guidance in paras 17 and 30 of the NPPF. It properly seeks to alter the local pattern of recent housing growth, as a disproportionate percentage (almost half) has taken place in the smaller settlements, adding to commuting by car and congestion on the road network at peak hours. The number of new homes outside the two towns would be around a quarter of the overall total for the plan period taking into account the significant level of housing land supply already available in the rural areas.

### *Policy Villages 1*

213. Most of the rural housing would be directed to the larger villages with existing services and facilities as the clearly more sustainable locations and in accord with paras 28, 55 and 70 of the NPPF. To this end, policy Villages 1 provides a categorisation of settlements to guide new housing proposals that will largely comprise small scale schemes within their present built up limits.
214. Since being updated in 2014, the survey work from which this hierarchy or ranking derives, supplemented by the Cherwell Rural Areas Integrated

Transport and Land Use Study (CRAITLUS), provides a generally robust evidence base. Policy Villages 1, as now modified by the Council, also takes into account “village clustering”, to help reduce the need to travel by car, whereby smaller “satellite” villages in category B form a functional grouping with larger rural centres nearby in category A - service villages. Only limited infilling and conversions of existing buildings will normally be permitted in all other settlements in category C.

215. Many of the matters raised by representors relating to policies Villages 1 – 5 concern specific issues in individual settlements and/or sites of a non-strategic scale, i.e. with potential for less than 100 new homes, all of which are for consideration in the LP Part 2 process and consequently are not addressed in this report. Other representations, including from some Parish Councils, point to apparent inconsistencies and alleged inaccuracies remaining in the updated survey results, such that certain villages may have been mis-categorised.
216. However, even if so in one or two instances, the hierarchy is not “set in stone” for the full plan period and will, no doubt, be reviewed from time to time and as and when new services and facilities are provided or others may be lost. In particular, the relevant survey data will need to be thoroughly checked and comprehensively reviewed during the LP Part 2 process and before any new development sites are allocated therein for settlements in category A.
217. Consequently, these detailed concerns, whilst legitimate and understandable, do not render policy Villages 1 or the inclusion of a hierarchy unsound. Nor does it mean that the suitability of a three tier ranking of settlements across the district outside the towns needs to be reconsidered, given that it forms an appropriate part of the sustainable overall strategy and objectives in the plan. Taking into account that Kidlington is subject to its own policies, there is no necessity or justification for an additional category of “A plus” villages listing the largest ones, nor to make them the subject of increased allocations for that reason alone. Accordingly, as modified, policy Villages 1 is sound (**MMs 131-145**).

#### *Policy Villages 2*

218. Policy Villages 2 deals with the distribution of growth across the rural areas and indicates that around 750 new homes in total should be delivered at the category A villages, with all sites of a non-strategic scale to be allocated through the LP Part 2 and/or in Neighbourhood Plans where they are being produced. Subject to clarifications and adding a criterion regarding flood risk (**MM 147**), the policy is sound, with all of the other listed criteria being suitable and sensible considerations to be taken into account in each case.

#### *Policy Villages 3*

219. In accord with the guidance in the NPPF and PPG, Policy Villages 3 provides the opportunity for small scale rural exception sites to be brought forward, within or adjacent to villages, to meet specific identified local housing needs, subject to suitable tests. This policy is also consistent with the relevant evidence regarding the affordability and availability of rural housing across the district currently and is therefore sound.

#### *Policy Villages 4*

220. The Council's evidence base, including the Playing Pitch and Green Space Strategies, satisfactorily demonstrates that there are a number of existing deficiencies and likely future shortfalls in open space, sport and recreation facilities in Kidlington and the rural areas. Together with policies BSC 10, 11 and 12, and consistent with para 73 of the NPPF, policy Villages 4 sets out the detailed requirements in each of three rural sub-areas of the district, albeit the data will need to be updated as part of the LP Part 2 process to facilitate delivery, including in connection with new development schemes. Notwithstanding, the policy is soundly based and reasonable in principle.

*Policy Villages 5*

221. Former RAF Upper Heyford is a very large ex-military base of around 520 ha that already has permission for a new settlement as part of a complex planning history since its closure in 1994. This scheme, plus a further permission for 60 units, would provide 314 refurbished homes and 821 new ones (1,135 total), with employment uses and related facilities.

222. However, in view of the need for a significant increase in new housing delivery in the district to meet the full, up to date, OAN, the Council now recognises the site's potential for a substantially larger number of new homes. This includes in respect of the identification of some limited additional greenfield sites, immediately adjacent to the former base, where new housing development would be complementary to that already permitted. Together with associated infrastructure and the conservation of the site's unique historic heritage assets, such a larger scheme would be capable of creating a more self-contained new community. In total it would involve a further 1,600 or so dwellings, with at least 30% affordable housing in accord with policy BSC 3.

223. The evidence base that justifies this additional provision is extensive. It includes, as listed in para C.260 of the plan, the detailed studies on the site's historic importance and character, including by EH, the potential visual and landscape impacts of re-development, as well as that of the additional adjoining greenfield sites, given the location on top of a plateau in a rural area, and the transport and traffic implications, as well as the 2011 Masterplan for the permitted scheme. It is supported by the SA Addendum (SUB 26PM).

224. It is effectively common ground that the site essentially comprises three functional areas, with the main flying field and technical site to the north of Camp Road, that runs east-west through it, and the mainly residential area to the south of the road. The former has the greatest historical significance, both nationally and internationally, due to its associations with the "Cold War" and the number, variety and extent of retained structures from that era, many of which help to define its unique character and interest. In the main, these are listed buildings and/or SAMs and thus have legal protection in any event.

225. Proposals to create a "Cold War" Park/visitor experience open to the public, to help conserve, enhance and interpret the site's historic assets as part of the full project are being seriously pursued by the developers of the site, EH and both District and County Councils. Thus, such a facility has at least reasonable prospects for delivery at present in conjunction with the new housing and related elements, with its important public benefits. For sustainability reasons, reflecting the above and the market demand for space at the existing

Heyford Park employment site, it is entirely appropriate that the policy also provides for employment growth as part of the overall scheme to deliver around 1,500 new jobs in around 120k sq m of buildings, principally in use classes B1, B2 and B2.

226. There are understandable local concerns about the traffic and transport impacts of the increased level of development on the surrounding rural area and on the local road network in particular. However, it is very relevant that OCC, the local highway authority, and the HA are now essentially content that, with particular junction and other localised improvement works to be paid for by the scheme, notably at Middleton Stoney crossroads/traffic lights, the available capacity can be increased to cope satisfactorily with the likely increased traffic generation. However, it is also clear that more major works, with their associated costs, may well be necessary for any more new housing than now identified in the modified plan.
227. Even so, these conclusions are based on the reasonable but challenging assumption that the use of non-car travel modes, especially public transport and here that effectively means bus services, can be materially improved. In particular, this is likely to involve a minimum half hour frequency to Bicester and Oxford during the working week, at least. The main local bus operator (Stagecoach) confirmed at the hearings that such a high quality service is considered feasible on a commercially viable basis, albeit requiring subsidy from the development during the critical initial period to become established as new residents arrive and to influence their travel choices from the outset, as has been achieved elsewhere.
228. In the light of all of the above, the modified proposals would make effective use of largely previously developed land and constitute sustainable development in line with the NPPF and PPG, including in respect of the additional adjoining greenfield areas. This conclusion and the general acceptability of the modified proposals in the plan, including the potential impacts on the LBs, SAMs and CAs, their unity and the allocation of limited additional areas of currently undeveloped land to the south of Camp Road adjacent to existing dwellings for new housing, are confirmed by the August 2014 interim report of the independent "urban capacity" assessment commissioned by the Council (ENV 21PM).
229. Importantly, a number of relevant detailed considerations are addressed in the criteria set out in policy Villages 5, as well as appropriate expectations for the scheme to provide suitable utility services, health and community facilities, schools, sports pitches and open spaces and a contribution to any necessary improvements to the capacity of junction 10 of the M40. However, for soundness and in line with the significant increase in the provision of new homes on the overall site, it is necessary to modify policy Villages 5 in a number of ways in addition to the revised housing numbers. This includes by adding references to secondary education also being required and the new primary school having the potential to expand in the future. The need for special consideration to be given to respecting the historic significance and character of the taxiway and entrance to the flying field, including the existing hangars, by keeping development back from the northern edge of the development areas, particularly new housing areas A and B, as recommended by EH, also needs to be added.

230. Furthermore, for clarity and completeness, the policy should also refer to public rights of way and a walking network of routes to and from the site, the mitigation of noise impacts, the provision of new habitats for ground nesting birds and great crested newts, as well as the conservation and enhancement of the LWS (as extended to the south). An archaeological field investigation is another essential element of the scheme, which should also seriously examine the potential for district heating from the nearby energy recovery facility.
231. Policy criteria relating to the adjoining CA, high quality design and particularly the boundary treatment for adjacent greenfield land are also required, plus public open space and green infrastructure links, together with the provision of extra care units and opportunities for self-build affordable housing. The boundary treatment, including landscape impact mitigation, to the south west of the site, including between it and the village of Upper Heyford, is particularly important to help ensure that the latter retains its separate identity as a rural settlement once this scheme is complete. It is also relevant in relation to the adjoining Rousham, Lower Heyford and Upper Heyford CA. This contains the Grade 1 listed Rousham Park, albeit set in the valley of the River Cherwell largely at a level well below that of the site and thus, subject to the above, its setting need not be directly affected by the proposals.
232. This treatment should also include the re-instatement of the historic Portway route across the western end of the extended former main runway as a public right of way on its original alignment. Subject to all of these modifications (**MMs 148-157**), policy Villages 5 would be sound and compliant with the NPPF and PPG. The full and up to date OAN for the district can be met on the totality of sites allocated in the plan and the available evidence confirms that the overall new settlement project, as presently envisaged, is viable and deliverable over the plan period. Accordingly, there is no necessity to allocate any further greenfield sites around the former base either now or as "reserve" sites for the future, as they would not be more sustainable than those allocated in the plan.
233. Given the recent identification of Bicester as a "Garden City" by government, reflecting the scale of new development there and the likely costs of the required infrastructure to support that growth, as well as the modified proposals for former RAF Upper Heyford, there is no necessity for a further new settlement to be considered in Cherwell to 2031, as things stand. The OAN of the district can be met in full on the sites allocated in the plan. This conclusion applies in respect of sites related to the M40 motorway junctions as to any other locations within the district, at present.

### **Issue 13 – Kidlington (Policies Kid 1 and Kid 2) and the Oxford Green Belt (Policy ESD 14)**

#### *Policy Kidlington 1*

234. Taking into account the results of the Cherwell Economic Analysis Study (ECO 01) and the 2012 Employment Land Review update (ECO 06), including that there is a constrained supply but a continuing demand locally, as well as the Oxford/Oxfordshire City Deal, the Council has concluded that there are exceptional circumstances justifying a "limited, small scale," review of the OGB boundary at both Begbroke Science Park and at Langford Lane in Kidlington.

This would relate to the two “areas of search” shown on the Policies Map and be carried out through the LP Part 2 process.

235. It would aim to meet particular local employment needs arising from the present cluster of high tech and knowledge economy firms based at the two locations, with strong links to the city and university, and take advantage of a strategic opportunity to provide sustainable economic growth locally. Some occupiers are university “spin out” companies carrying out nationally and internationally important scientific research, with very good prospects for growth in the short to medium term.
236. As a result, new firms would be able to take advantage of the synergies with existing companies that should encourage economic growth through the effects of clustering and the proximity to the airport, which is, of course, an important but fixed infrastructure facility. Accordingly, sites at Banbury and Bicester are less likely to be realistic alternatives for some of these prospective occupiers. Moreover, the locations do not directly affect the important “Kidlington Gap” part of the OGB and the limited changes envisaged should be capable of providing new long term defensible boundaries so that no form of precedent for any other schemes need arise.
237. The fact that the extent of the land in the two “areas of search” is restricted in scale also means that the likely growth in traffic movements from new employment development should be safely accommodated on the strategic and local road networks without adding materially to congestion or delays. This is reflected in the initial transport assessment work carried out and accepted by OCC as the local highway authority and the absence of objection from the HA. It is also reinforced by the generally good bus services that exist and the significant public transport improvements taking place, including the new rail station at Water Eaton. For similar reasons, the total number of new jobs arising is not likely to add significantly to existing housing pressures in Kidlington itself, bearing in mind that it also forms part of a wider market area, including Oxford city.
238. In my judgement, this specific combination of factors amounts to the exceptional circumstances necessary to justify the very limited changes to the OGB boundary presaged in the policy and that it would be consistent with the guidance in paras 83-85 of the NPPF, including regarding the definition of boundaries. Given its small scale and defined extent in the areas of search thus likely minimal overall impact on the purposes of the OGB, this element of policy Kid 1 is therefore sound. But these exceptional circumstances do not also apply elsewhere in the locality and thus there is no necessity or imperative to conduct a more wide ranging review of the OGB at Kidlington or nearby for economic/employment reasons at present. The detailed design and development criteria set out in policy Kid 1 are all reasonable, realistic and appropriate for the locations and therefore, subject to the addition of “Oxford Technology Park” in part a) for clarity (**MM 127**), the policy is sound with other text amendments for clarity (**MMs 125/126**).

#### *Policy Kidlington 2*

239. Policy Kid 2 properly seeks to strengthen the village centre through further environmental improvements and encouraging the evening economy to

reinforce its role as a local service centre. However, references to the general acceptability of new housing in the village centre, where it would not lead to the loss of retail or “main town centre” uses, and to confirm that the boundary definition of the expanded centre will be a matter for the LP Part 2, need to be added for clarity and soundness (**MMs 128/129**).

*Policy ESD 14 – Oxford Green Belt*

240. The first two parts of policy ESD 14, dealing with the OGB, are entirely in accord with the NPPF and PPG and sound. The third part also refers first to the OGB boundary review at Kidlington to meet local employment needs, in accord with policy Kid 1 (see above).
241. Para B256 of the modified Plan supporting policy ESD 14 already refers to local affordable housing needs potentially being met by small scale schemes on rural exception sites, including in the OGB, under policy Villages 3. This applies to Kidlington, as elsewhere. Although it is the largest village in the district, the scale of that specific local need on its own is considered unlikely to generate the requirement for a strategic site on the edge of the settlement in the plan period. This conclusion is reinforced by the identification of some prospects for limited new housing within the existing built up area in the early work on the Kidlington Framework Masterplan, now underway. Consequently, the local housing needs of the village should be capable of being addressed under Policy Villages 3, rather than requiring a separate local review of the OGB boundary around Kidlington.
242. There are also likely to be particular complications and potential confusion that would arise for all concerned with such a review alongside the limited local OGB boundary review to meet employment needs. Additionally, there is the obvious difficulty of accurately assessing the needs that relate to Kidlington alone, rather than the wider Oxford area, especially if more than affordable housing is considered. Therefore, the Council's proposed modification to introduce such a commitment into the policy is not necessary and would be unsound, as exceptional circumstances do not exist at present to justify an OGB boundary review to help meet the local housing needs of the village. In the light of the above, further modifications are necessary to the policy and its text for clarity (**MMs 61/62**).

**Issue 14 – Infrastructure, Delivery and Monitoring (Policy INF 1)**

243. Significant investment is already underway in new and improved infrastructure locally, not least in respect of public transport and especially rail, thus enhancing the district's realistic capacity for growth over the plan period. Of the short to medium term projects listed in the IDP in App 8, some are now complete, with well over half the remainder having full funding secured or committed and only a relatively few, none of which are critical to the plan's implementation, without allocated funds at present. In addition, government has recently announced that funding of around £100m will be available, subject to value for money, to help deliver new development at Bicester in line with its designation as a “Garden City”, alongside Ebbsfleet in Kent.
244. Moreover, with a variety of strategic sites identified, the plan's overall strategy does not rely on any one or more specific elements of new infrastructure

having to be provided before the delivery of the new housing, employment and related development envisaged. Consequently, it provides a reasonable degree of flexibility regarding delivery in the event that one or more of the key sites does not come forward as expected for whatever reason. In most cases, the allocated sites have active developer interest, with many having already commenced on site in part and/or with planning permission or Council resolutions to permit, subject to legal agreements.

245. In addition, the October 2013 LP Viability Study (PWE 02) concludes that the delivery of all the strategic sites is currently viable, including Canalside at Banbury (Ban 1) albeit with a slightly later start than most others. The Council itself is also taking a proactive role in implementation, including through the purchase of the Graven Hill site (Bic 2) from the Ministry of Defence and the emerging proposals for the largest "self-build" site in the country as part of the overall scheme, alongside new employment provision.
246. The new housing numbers in the plan are not intended to act as a cap or upper limit, nor those for new jobs, and there are no general or specific phasing policies in the plan directly affecting the timing of delivery on any of the strategic sites. Therefore, there is scope for some to come forward more quickly than initially envisaged, if viable, including at NW Bicester (Bic 1), albeit the annual level of new housing proposed is a significant increase compared to recent figures and is likely to prove challenging for all concerned to achieve consistently.
247. Notwithstanding, the modified housing trajectory in Table 15 (and that for employment in Table 16) (**MM 168**) represent reasonable estimates based on current information and provide a suitable basis for the purposes of monitoring. In the light of all of the above, there are reasonable prospects of delivering the plan's strategy and objectives by 2031 with the necessary essential infrastructure in place. Furthermore, in principle, the Council's intended monitoring and review processes should be satisfactory to provide sufficient flexibility and to assist implementation over time.
248. However, given the importance of maintaining a five year housing land supply, amendments and additions to paras E11, E12, E22 and E25 are required to provide adequate clarity in respect of the monitoring of new housing delivery and particularly the actions that would need to be taken if shortfalls arise (**MMs 164-167**). In addition, changes to para D22 are also necessary to refer to Upper Heyford specifically and other areas of the district to reflect other modifications for accuracy and completeness, including that there is no demonstrable overriding need for a review of the OGB boundaries at Kidlington to meet the current local housing needs of the village (**MMs 159-163**).

## Assessment of Legal Compliance

249. My examination of the compliance of the Plan with the legal requirements is summarised in the table below. I conclude that the Plan meets them all.

LEGAL REQUIREMENTS	
Local Development Scheme (LDS)	The Local Plan is identified within the latest approved LDS of November 2014, which sets out an

	expected adoption date of May 2015. The plan's content and timing are generally compliant with the LDS, albeit there has been some delay due to the need for modifications.
Statement of Community Involvement (SCI) and relevant regulations	The SCI was adopted in July 2006 and consultation has been compliant with the requirements therein, including the consultation on the post-submission proposed 'main modification' changes (MM)
Sustainability Appraisal (SA)	SA has been carried out and is adequate.
Appropriate Assessment (AA)	The Habitats Regulations AA Reports of October 2009, September 2010 and August 2012, plus the Addendums of March 2013, October 2013 and October 2014, conclude that there are no likely significant adverse effects on the Oxford Meadows Special Area of Conservation (SAC), or any other SACs outside the district, arising from the plan, including "in combination with other plans/proposals", as agreed by Natural England.
National Policy	The Local Plan complies with national policy in the NPPF, except where indicated and modifications are recommended.
Sustainable Community Strategy (SCS)	Satisfactory regard has been paid to the SCS.
Public Sector Equality Duty (PSED)	The Local Plan complies with the Duty.
2004 Act (as amended) and 2012 Regulations.	The Local Plan complies with the Act and the Regulations.

## Overall Conclusion and Recommendation

250. The plan has a number of deficiencies in relation to soundness for the reasons set out above, which mean that I recommend non-adoption of it as submitted, in accordance with Section 20(7A) of the 2004 Act. These deficiencies have been explored in the main issues set out above.

251. The Council has requested that I recommend main modifications to make the Plan sound and capable of adoption. I conclude that with the recommended main modifications set out in the Appendix the Cherwell Local Plan satisfies the requirements of Section 20(5) of the 2004 Act and meets the criteria for soundness in the National Planning Policy Framework.

*Nigel Payne*

<b>Mod No.</b>	<b>Page No.</b>	<b>Policy Paragraph</b>	<b>Modification</b>		
3	Executive Summary p. ix & p. x	Building Sustainable Communities	<p>Reword as follows;</p> <p>The Plan seeks to boost significantly the supply of housing and meet the objectively assessed need for Cherwell identified in the Oxfordshire Strategic Housing Market Assessment (SHMA) 2014 – some 1,140 dwellings per annum or a total of 22,800 from 2011 to 2031 Policy BSC 1 provides for 22,840 homes over the Plan period and sets the overall distribution of development across the district. Over the Plan period 10,129 homes are to be provided at Bicester, some 7,319 homes at Banbury and 5,392 homes in the rural areas including Kidlington. A further 2,707 homes are allocated at the North West Bicester Eco-Town (Bicester 1) but are not presently expected to be delivered until after 2031.</p> <p>Between 2011 and 2014, 1,106 homes were completed in Cherwell including 365 at Bicester, 213 at Banbury and 528 elsewhere. This leaves 21,734 of the planned housing requirement yet to provide.</p> <p>The Local Plan's housing strategy seeks to support the economic growth of the towns, meet housing needs across the District and further support the development of the approved, new settlement at Former RAF Upper Heyford. Growth at Bicester is aimed at supporting business investment and improving the range of services and facilities. It also responds to the under-delivery of housing at Bicester in recent years.</p> <p>The Plan includes a housing trajectory (within Section E) showing when new and approved strategic sites are expected to be delivered and setting out allowances non-strategic sites and small 'windfall' sites of less than 10 dwellings. The table below summarises the overall distribution of housing.</p>

			(1)The total allocation for North West Bicester eco-development is 6,000 homes. It is expected that 3,293 homes could be delivered by 2031.				
7	Executive Summary p. xi	The Villages and Rural Areas	Reword the following paragraph;  Former RAF Upper Heyford is proposed as a strategic site for a new settlement in the rural areas. Elsewhere in the rural areas (including Kidlington) a substantial amount of housing has been completed or approved in recent years. However, some further development is required to help meet housing needs identified in the 2014 Strategic Housing Market Assessment (SHMA) and to assist the vitality of Cherwell’s many villages.				
8	Executive Summary p. xi	The Villages and Rural Areas	Delete paragraph.				

<b>Mod No.</b>	<b>Page No.</b>	<b>Policy Paragraph</b>	<b>Modification</b>		
9	Executive Summary p. xi	The Villages and Rural Areas	<p>Insert new paragraphs as the final two paragraphs on page xi as follows;</p> <p>Policy Villages 1 identifies the most sustainable villages (Category A) and their “satellite” villages where minor development within built-up limits will, in principle, be supported (typically site of less than 10 dwellings). Development within less sustainable villages (Category C) will be restricted to infilling and conversions. The Housing Trajectory in Section E provides of small site ‘windfall’ allowance for such proposals.</p> <p>Policy Villages 2 provides for a further 750 homes to be provided at the Category A villages. This will principally involve the identification of sites of 10 or more dwellings within or outside the built-up limits of those villages. This is in addition to sites already approved across the rural areas as shown in the Housing Trajectory. Sites will be identified in a Local Plan Part 2, through the preparation of Neighbourhood Plans and through the determination of applications for planning permission. The policy is supported by the latest Strategic Housing Land Availability Assessment (SHLAA).</p>

11	15	Introduction  1.3	<p>Update text as follows;</p> <p>The Plan sets out the vision and strategy for the development of Cherwell</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			through to 2031. It sets out why, where and how Cherwell will grow over the next 17 years.		
12	17	Introduction  1.22a	Update the text as follows;  More recently it is the NPPF (published March 2012) and the NPPG (March 2014) that have guided completion of the Plan. The NPPF includes a presumption in favour of sustainable development, an emphasis on assessing needs locally, on working jointly with other authorities and on achieving economic growth. The Plan has been informed by the NPPF's twelve 'Core Planning Principles' including that planning be "... <i>genuinely plan-led, empowering local people to shape their surroundings, with succinct local and neighbourhood plans setting out a positive vision for the future of the area...</i> ".		
13	17	Introduction  1.23	Remove ref to the South East Plan and update the base date in first sentence;  This Local Plan covers the period 1 April 2011 to 31 March 2031.		
14	17	Introduction  1.23a	Add new paragraph following 1.23;  <u>Any future review of the Plan will require the cooperation of all authorities in Oxfordshire to meet the County's total housing need arising from the need assessed in the 2014 SHMA. This will include catering for the housing needs of Oxford City. A strategic Green Belt boundaries review is one of a number of options to consider in meeting the County's overall housing needs. All local authorities in Oxfordshire are working jointly to take forward the conclusions of the new Oxfordshire SHMA and the outcome of this joint work may lead to a strategic Green Belt review.</u>		

Mod No.	Page No.	Policy Paragraph	Modification		
15	21	Introduction  New para 1.49dd	<p>Add new paragraph following 1.49d;-</p> <p><u>As the gateway to the Midlands, Cherwell looks beyond the County of Oxfordshire and has forged deep positive links with its neighbouring Councils of Stratford-on-Avon, Aylesbury Vale and South Northamptonshire.</u></p> <p><u>The application of the Duty to Cooperate is leading to significant policy changes and agreements that are helping to locate the Cherwell Local Plan within its wider sub-regional context. This includes commitments to manage the growth impacts on the A41 with Aylesbury Vale District Council, cooperation on opportunities for securing coordinated investment in the High Performance Engineering Sector with Stratford-on-Avon Council and addressing congestion challenges on Junction 10 on the M40 with South Northamptonshire District Council. It also includes working with Oxfordshire County Council and Oxford City Council on the development of the Oxford Transport Strategy including improved connections to the A40 and A44 with West Oxfordshire Council and consideration of how best to address congestion and Air Quality on the A34 with South Oxfordshire and Vale of White Horse Councils.</u></p>		
16	26	Strategy  A.11 – Bullet point 2	<p>Update second bullet as follows;</p> <ul style="list-style-type: none"> <li>• Away from the two towns, the major single location for growth will be at the former RAF Upper Heyford base which will deliver <u>2,361 homes.</u></li> </ul>		
17	27	Strategy  A.11- Bullet point 5	<p>Update fifth bullet point as follows;</p> <ul style="list-style-type: none"> <li>• Development in the open countryside will be strictly controlled. In the south of the district, the Green Belt will be maintained, though a small</li> </ul>		

Mod No.	Page No.	Policy Paragraph	Modification		
			scale local review of the Green Belt will be conducted to accommodate identified employment needs <u>at Kidlington</u> .		
18	36	Economy: Introduction  B.26	<p>Update text as follows;</p> <p>A further analysis of the economy of the District and the changes it is experiencing was conducted in 2012 and updated in 2014 in an addendum ‘Cherwell Economic Analysis addendum 2014’,. Table 33 of the Oxfordshire SHMA sets out projected growth in jobs of 1,155 per annum and 1,142 homes per annum under the ‘planned economic growth’ forecast. Table 34 shows a total of 23,091 jobs generated under this scenario. The SHMA Economic Forecasting report on page 40 considers the proportion of total jobs generated (including indirect jobs) that would require B use class employment land. It is estimated that only 12,700 jobs will be located on B Use class land in Cherwell (table 6.2). The Submission Local Plan (January 2014) identified land for approximately 15,000 jobs and the consultants show at paragraph 6.6 of the SHMA Economic Forecasting Report that the forecast growth in the Economic Forecasting Report could be accommodated on land identified for development in Cherwell’s Local Plan (January 2014). The addendum takes into account the new housing numbers for Cherwell set out in the Oxfordshire SHMA, on which this Plan is based, and the Committed Economic Growth Scenario they relate to. It also reflects any other significant changes that have occurred since publication of the 2012 report and informs a consistent broad alignment of policies on jobs and housing for the Local Plan including in relation to sub-areas. The 2014 Economic Analysis Study addendum identifies a need for just over 100 hectares of employment land to 2031.</p>		
19	38	Policy SLE 1  B.41	<p>Update text as follows;</p> <p>This Local Plan identifies strategic sites for employment use in Banbury and Bicester (see ‘Policy Bicester 4: Bicester Business Park’, ‘Policy Bicester 10: Bicester Gateway’, ‘Policy Bicester 11: North East Bicester Business Park’,</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			<p>'Policy Bicester 12: South East Bicester' in Section C.2 'Bicester' and Policy Banbury 15 in Section C.3 Banbury. The Local Plan also identifies two large mainly 'committed' employment sites, which are covered by Policy Bicester 4 Bicester Business Park and 'Policy Banbury 6: Employment Land West of M40.) and which have recent planning permissions. The former RAF Upper Heyford site will also provide for employment uses. The sites identified in the Employment Trajectory in the Local Plan cover <u>200</u> hectares (gross) and result in approximately <u>20,500</u> jobs generated on B Use class land. There may be a slight change in jobs on sites due to site constraints such as flood risk and differing B use class mixes, which will be determined at the master planning stage. Further jobs will be generated generally through other means such retail and home working. Policies seek different types of employment units to ensure a range of employment uses are provided. Land is allocated taking account of economic evidence base, matching growth in housing and to cater for company demand, particularly for logistics. The Council's assessment of and strategies for housing, employment and other uses are integrated, and take full account of relevant market and economic signals.</p>		
20	39	<p>Policy SLE 1</p> <p>B.46</p>	<p>Delete paragraph and replace with;</p> <p>This policy applies to B use class employment development. The provision or the loss of jobs in general terms will be a material consideration for determining proposals for any use classes. Policy SLE 2 will apply for proposals for main town centre uses. The policy applies to sites which have planning permission for employment uses. Where any allocated or committed employment sites in the District remain undeveloped <u>in the long term</u> and there is no reasonable prospect of the site being used for that purpose other uses will be considered.</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
21	39	Policy SLE 1	<p>Delete Policy SLE1 and replace with;</p> <p>Employment development on new sites allocated in this Plan will be the type of employment development specified within each site policy in Section C 'Policies for Cherwell's Places'. Other types of employment development (B Use class) will be considered in conjunction with the use(s) set out if it makes the site viable.</p> <p>In cases where planning permission is required existing employment sites should be retained for employment use unless the following criteria are met:</p> <ul style="list-style-type: none"> <li>the applicant can demonstrate that an employment use should not be retained, including showing the site has been marketed and has been vacant in the long term.</li> <li>the applicant can demonstrate that there are valid reasons why the use of the site for the existing or another employment use is not economically viable.</li> <li>the applicant can demonstrate that the proposal would not have the effect of limiting the amount of land available for employment.</li> </ul> <p>Regard will be had to whether the location and nature of the present employment activity has an unacceptable adverse impact upon adjacent residential uses</p> <p>Regard will be had to whether the applicant can demonstrate that there are other planning objectives that would outweigh the value of retaining the site in an employment use.</p> <p>Employment development will be focussed on existing employment sites. On existing operational or vacant employment sites at Banbury, Bicester, Kidlington and in the rural areas employment development, including intensification, will be</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			<p>permitted subject to compliance with other policies in the Plan and other material considerations. New dwellings will not be permitted within employment sites except where this is in accordance with specific site proposals set out in this Local Plan.</p> <p>Employment development at Banbury, Bicester and Kidlington on sites will be supported if they meet the following criteria:</p> <ul style="list-style-type: none"> <li>• Are within the built up limits of the settlement unless on an allocated site</li> <li>• They will be outside of the Green Belt, unless very special circumstances can be demonstrated</li> <li>• Make efficient use of previously-developed land wherever possible</li> <li>• Make efficient use of existing and underused sites and premises increasing the intensity of use on sites.</li> <li>• Have good access, or can be made to have good access, by public transport and other sustainable modes</li> <li>• Meet high design standards, using sustainable construction, are of an appropriate scale and respect the character of its surroundings</li> <li>• Do not have an adverse effect on surrounding land uses, residents and the historic and natural environment.</li> </ul> <p>Unless exceptional circumstances are demonstrated, employment development in the rural areas should be located within or on the edge of those villages in <u>Category A</u> (see Policy Villages 1).</p> <p>New employment proposals within rural areas on non-allocated sites will be supported if they meet the following criteria:</p> <ul style="list-style-type: none"> <li>• They will be outside of the Green Belt, unless very special circumstances can be demonstrated</li> </ul>		

Mod No.	Page No.	Policy Paragraph	Modification		
			<ul style="list-style-type: none"> <li>• Sufficient justification is provided to demonstrate why the development should be located in the rural area on a non-allocated site</li> <li>• They will be designed to very high standards using sustainable construction, and be of an appropriate scale and respect the character of villages and the surroundings.</li> <li>• They will be small scale unless it can be demonstrated that there will be no significant adverse impacts on the character of a village or surrounding environment</li> <li>• The proposal and any associated employment activities can be carried out without undue detriment to residential amenity, the highway network, village character and its setting, the appearance and character of the landscape and the environment generally including on any designated buildings or features (or on any non-designated buildings or features of local importance).</li> <li>• The proposal will not give rise to excessive or inappropriate traffic and will wherever possible contribute to the general aim of reducing the need to travel by private car</li> <li>• There are no suitable available plots or premises within existing nearby employment sites in the rural areas</li> </ul> <p>The Local Plan has an urban focus. With the potential for increased travel by private car by workers and other environmental impacts, justification for employment development on new sites in the rural areas will need to be provided. This should include an applicant demonstrating a need for and benefits of employment in the particular location proposed and explaining why the proposed development should not be located at the towns, close to the proposed labour supply.</p> <p>Monitoring and review will be undertaken regularly.</p> <p>Extensions to existing employment sites will be considered in the Local Plan</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			Part 2.		
22	41	Policy SLE 2  B.55	<p>Delete the first bullet point;</p> <p>The urban centres within the district offer an important focus for shopping, commerce and the provision of leisure and other services to meet the needs of local people and visitors. The main centres in the district are the town centres of Banbury and Bicester and the village centre of Kidlington. There is also significant other shopping floorspace in the following locations:</p> <ul style="list-style-type: none"> <li>•</li> <li>• Banbury Cross Retail Park</li> <li>• Various other edge of centre &amp; out-of-centre large stores including a number of major food stores</li> <li>• At various local centres within Banbury and Bicester.</li> </ul>		
23	41	Policy SLE 2  New para B.55a	<p>Add new paragraph following B.55;</p> <p>In addition to the more traditional retail parks, food stores and local centres, Bicester Village Outlet centre shopping centre is recognised as providing a specialist role which complements the town centre. As the District's most visited tourist destination, Bicester Village serves both national and international catchments and makes a significant contribution to the local economy. The Council supports the expansion of Bicester Village, <u>to complement, and help to improve connectivity with, the existing town centre.</u></p>		

Mod No.	Page No.	Policy Paragraph	Modification		
24	42	Policy SLE 2	<p>Update policy as follows;</p> <p>Retail and other 'Main Town Centre Uses' will be directed towards the town centres of Banbury and Bicester and the village centre of Kidlington in accordance with Policies Bicester 5, Banbury 7 and Kidlington 2. The Council will apply the sequential test as set out in the NPPF as follows:</p> <ul style="list-style-type: none"> <li>- Proposals for retail and other Main Town Centre Uses not in these town centres should be in 'edge of centre' locations.- Only if suitable sites are not available in edge of centre locations should out of centre sites be considered.</li> <li>- When considering edge of centre and out of centre proposals, preference will be given to accessible sites that are well connected to the town centre.</li> </ul> <p>An impact assessment will also be required in accordance with requirements in the NPPF.</p> <p>The Council will consider if the proposals satisfy the sequential test and if they are likely to have a significant adverse impact on one or more of the factors in the NPPF.</p> <p>All proposals should comply with Policy SLE 4</p> <p>The Council will require an impact assessment if the proposal is over 2000 sq. metres (gross) in Banbury, 1500sq metres (gross) in Bicester and 350 sq. metres (gross) elsewhere.</p> <p>Evidence in the Council's Retail Study will also be considered in determining applications if information is not provided by the applicant which is considered to supersede this evidence.</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			<p>Proposals should comply with Policy ESD16.</p> <p>The Council will support the provision of new local centres containing a small number of shops of a limited size within the strategic housing allocations on strategic sites set out in this Local Plan.</p>		
25	44	<p>Policy SLE 4</p> <p>New para B.68a, B.69 and B.72</p>	<p>Insert new paragraph after B.68;</p> <p>New development in the District will be required to provide financial and/or in-kind contributions to mitigate the transport impacts of development. This will support delivery of the infrastructure and services needed to facilitate travel by sustainable modes, whilst also enabling improvements to be made to the local and strategic road and rail networks.</p> <p>Amend B69 as follows;</p> <p>Over the life of the plan there will be investment in the highway network as well as contributions from development to strengthen the road infrastructure of the plan area. This will include the South West Bicester Perimeter Road (Vendee drive, already completed) and new highway improvements, including a potential relief road on the south east and south of Bicester, works to the A34 south from Bicester and improvements to junctions 9 and 10 of the M40, of which Junction 9 is programmed for early delivery. There will also be improvements to the Windsor Street/Upper Cherwell Street Corridor in Banbury to Hennef Way junctions and to the Bridge Street/ Cherwell Street junction. The potential for a link road on the eastern side of the M40, to mitigate the impact of traffic on the approach to Junction 11 along Hennef Way will also be explored with the County</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			<p>Council and Highways England.</p> <p>Add at end of para;</p> <p>Cherwell is working with Aylesbury Vale District Council to ensure the impacts of growth at Bicester and Aylesbury on the A41 are fully addressed and appropriate mitigation considered.</p>		
26	45	Policy SLE 3 B.62	<p>Amend 7<sup>th</sup> bullet point as follows:</p> <p>That Former RAF Bicester and Former RAF Upper Heyford represent potential new tourism developments.</p>		
27	46	Policy SLE 4	<p>Add text as below to the end of the Policy;</p> <p>New development in the District will be required to provide financial and/or in-kind contributions to mitigate the transport impacts of development.</p> <p>All development where reasonable to do so, should facilitate the use of sustainable modes of transport to make the fullest possible use of public transport, walking and cycling. Encouragement will be given to solutions which support reductions in greenhouse gas emissions and reduce congestion. Development which is not suitable for the roads that serve the development and which have a severe traffic impact will not be supported.</p>		
28	49	Policy BSC 1 B.89a	<p>Delete existing paragraph and insert new text;</p> <p>The Council is committed to meeting housing needs and accelerating delivery. Cherwell's housing needs are identified in the Oxfordshire Strategic Housing Market Assessment (SHMA) 2014. The SHMA identifies a need for 1,140 dwellings per annum equating to 22,800 dwellings from 2011 to 2031. The SHMA analysis includes an assessment of housing need based on demographic trends having regard to past shortfalls in housing delivery to 2011, consideration</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			of 'committed economic growth', modelling of the level of housing provision that might be required to meet affordable need in full and wider evidence of market signals. The SHMA states (para' 9.58), <i>"For Cherwell District the evidence indicates a need for 1,142 dwellings per annum (2011-2031) to support the Strategic Economic Plan. This is based on supporting Committed Economic Growth..."</i>		
29	49	Policy BSC 1  B.89b	<p>Delete existing paragraph and insert new text;</p> <p>Cherwell District Council will continue to work under the 'Duty to Co-operate' with all other Oxfordshire Local Authorities on an on-going basis to address the objectively assessed need for housing across the Oxfordshire housing market area and to meet joint commitments such as the Oxford and Oxfordshire City Deal (2014).</p> <p>As a first step Cherwell District Council has sought to accommodate the housing need for Cherwell District in full in the Cherwell Local Plan.</p> <p>Cherwell District Council recognises that Oxford may not be able to accommodate the whole of its new housing requirement for the 2011-2031 period within its administrative boundary. The urban capacity of Oxford is as yet unconfirmed.</p> <p>Cherwell District Council will continue to work jointly and proactively with the Oxfordshire local authorities and through the Oxfordshire Growth Board to assess all reasonable spatial options, including the release of brownfield land, the potential for a new settlement and a full strategic review of the boundaries of the Oxford Green Belt. These issues are not for Cherwell to consider in isolation. These options will need to be undertaken in accordance with national policy, national guidance, the Strategic Environmental Assessment (SEA) regulations, and the Habitats Regulations Assessment (HRA) to establish how and where</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			<p>any unmet need might best be accommodated within the Oxfordshire Housing Market Area.</p> <p>Joint work will need to comprehensively consider how spatial options could be supported by necessary infrastructure to ensure an integrated approach to the delivery of housing, jobs and services. Full public consultation will be central to a 'sound' process and outcome.</p> <p>If this joint work reveals that Cherwell and other Districts need to meet additional need for Oxford, this will trigger a partial review of the Local Plan, to be completed within two years of adoption, and taking the form of the preparation of a separate Development Plan document for that part of the unmet need to be accommodated in the Cherwell District. The Council will engage in joint working on supporting technical work such as countywide Sustainability Appraisal as required to support the identification of a sustainable approach to meeting agreed, unmet needs.</p>		
30	49	Policy BSC 1  B.90	<p>Delete existing paragraph and insert new text;</p> <p>The Council is committed to meeting the district's objectively assessed needs and, as described above, to working with partner authorities (including the Oxfordshire Growth Board) to determine how any other unmet needs arising from the SHMA can be sustainably accommodated within the Oxfordshire Housing Market Area. The housing strategy of this Local Plan seeks to deliver growth in accordance with the NPPF's Core Planning Principles including:</p> <ul style="list-style-type: none"> <li>- providing a positive vision for the future of Cherwell: a strategic growth and investment approach to the towns; an enlarged settlement in the centre of the District, further development at the villages to sustain them</li> <li>- proactively driving and supporting sustainable economic</li> </ul>		

Mod No.	Page No.	Policy Paragraph	Modification		
			<p>development by meeting the SHMA's Committed Economic Growth scenario</p> <ul style="list-style-type: none"> <li>- seeking to secure high quality design and a good standard of amenity by developing new neighbourhoods and achieving regeneration and redevelopment of key sites</li> <li>- taking account of the different roles and character of Cherwell's places by promoting the vitality of Bicester, Banbury and Kidlington and their ability to serve their hinterlands, protecting the Oxford Green Belt and concentrating development in sustainable rural locations to protect the intrinsic character and beauty of the countryside and to support thriving rural communities</li> <li>- encouraging the effective re-use of existing land and buildings and bring forward sites that contain land of lesser environmental value such as at Graven Hill (Bicester 2), Canalside (Banbury 1), Bolton Road (Banbury 8), Higham Way (Banbury 19) and at Former RAF Upper Heyford (Villages 5)</li> <li>- promoting strategic, mixed use developments conserving heritage assets in a manner appropriate to their significance such as those of national importance at Former RAF Upper Heyford, actively encouraging wildlife potential such as at South East Bicester (Bicester 12) and Gavray Drive (Bicester 13), and making the fullest possible use of public transport, walking and cycling and supporting community well-being such as at the North West Bicester Eco-Town (Bicester 1).</li> </ul>		
31	50	Policy BSC 1 B.91	Delete paragraph.		

Mod No.	Page No.	Policy Paragraph	Modification		
32	50	Policy BSC 1  B.92	<p>Update text as follows.</p> <p>In total, the Plan provides for five strategic development sites at Bicester in addition to the on-going construction of an urban extension at South West Bicester (Kingsmere) and a committed site at Talisman Road. It provides for 10 strategic development sites at Banbury, also in addition to an on-going urban extension at Bankside and committed sites at West of Warwick Road and Southam Road. The Plan makes allowances for non-strategic urban and rural sites in sustainable locations and by includes realistic and reliable windfall allowances for (previously developed) sites of less than 10 dwellings. Development at villages will be considered against Policy Villages 1: Village Categorisation, Policy Villages 2: Distributing Growth Across the Rural Areas and Policy Villages 3: Rural Exception Sites.</p>		
33	50	Policy BSC 1  B.94	<p>Update text as follows;</p> <p>Overall housing delivery from 2011 to 2031 will be as set out in the policy below. Further delivery will be seen at the North West Bicester site (Policy Bicester 1) beyond 2031 but the Plan does not preclude earlier or faster delivery.</p>		

Mod No.	Page No.	Policy Paragraph	Modification																																
34	50	Policy BSC 1	<p>Update policy text to read;</p> <p><b>Policy BSC 1: District Wide Housing Distribution</b></p> <p>Cherwell district will deliver a wide choice of high quality homes by providing for 22,840 additional dwellings between 1 April 2011 and 31 March 2031. 1,106 completions were recorded between 2011 and 2014 leaving 21,734 homes to be provided between 2014 and 2031. 35	51	Policy BSC 2  B.98	<p>Reword text as follows;</p> <p>The Plan seeks to secure the redevelopment of a number of major previously developed sites comprising Banbury Canalside (Policy Banbury 1) , Bolton Road and Spiceball in Banbury town centre (Banbury 8 &amp; 9), Higham Way near the railway station in Banbury (Banbury 19), the MOD site at Graven Hill, Bicester (Policy Bicester 2), a Phase 2 to Bicester town centre redevelopment (Bicester 6) and the former RAF Upper Heyford airbase (Policy Villages 5). The plan also includes a windfall allowance for small previously developed sites.</p> <p>Therefore, although the Plan allocates large areas of greenfield land to meet the district’s development needs, the Council will strive to ensure that these</p>																																

<b>Mod No.</b>	<b>Page No.</b>	<b>Policy Paragraph</b>	<b>Modification</b>		
			important 'brownfield' schemes are delivered.		
36	51	Policy BSC 2  B.99	Update text as follows;  It is also important to make efficient use of land. In general, new housing should be provided at a net density of at least 30 dwellings per hectare. However, the density of housing development will be expected to reflect the character and appearance of individual localities and development principles that are appropriate to the individual circumstances of sites. .		
37	51	Policy BSC 2  B.100	Update text as follows;  In considering development on smaller sites, the effective use of previously developed land within urban areas, and within those villages identified by the Local Plan as being suitable places for additional residential development (Policy Villages 1), will particularly be encouraged provided that is not of high environmental value.		
38	51	Policy BSC 2	Update Policy to read;  Housing development in Cherwell will be expected to make effective and efficient use of land. The Council will encourage the re-use of previously developed land in sustainable locations. New housing should be provided on net developable areas at a density of at least 30 dwellings per hectare unless there justifiable planning reasons for lower density development.		
39	51	Policy BSC 3  B.102	Amend policy by deleting third para and adding "and elsewhere" after "Kidlington" in para 2.  Update text as follows;  The Oxfordshire Strategic Housing Market Assessment (SHMA) 2014 has identified a net need of 407 affordable homes per year. This is calculated by		

Mod No.	Page No.	Policy Paragraph	Modification																						
			taking into account the backlog need, need from newly forming households, existing households falling into need and the supply of affordable housing. The SHMA points out that its needs model is based on evidence at a point in time and does not, for example, take account of the role which the Private Rented Sector plays in meeting the needs of households which require affordable housing. The Council's previous 'Strategic Housing Market Assessment Review and Update 2012' concluded that the net housing need based on the ability to afford private rents is 186 homes per year or 831 homes per year based on the ability to buy an entry level property. By applying a social/affordable rent split based on affordability, the overall need was identified as being in the region of 300 homes per year. Assessing need is complex and the level of need will fluctuate. However, the need to provide affordable housing at viable levels is clear.																						
40	54	Policy BSC 4  B.119	<p>Delete existing paragraph and replace as follows;</p> <p>The Oxfordshire SHMA (2014) provides conclusions on a strategic mix of housing for Oxfordshire over the next 20 years. 		B.120	The SHMA does advise, however, that at an individual local authority level, there is a greater need for 3-bed properties in Cherwell and that the overall mix identified is focused more towards smaller properties than the existing mix of homes in Oxfordshire.		
42	54	Policy BSC 4  B.121	Delete existing paragraph and replace as follows;  The SHMA also advises that in applying policies for housing mix to individual development sites, regard should be had to ' <i>...the nature of the development site and character of the area, and to the up-to-date evidence of need as well as the existing mix and turnover of properties at the local level</i> '.  		
43	54	Policy BSC 4  B.122	Delete paragraph		
44	54	Policy BSC 4  B.124          B.140	Update text as follows;  The NPPF recognise that a key driver of change in the housing market over the next 20 years will be the growth in the population of elderly people. Evidence produced for the Council's former Housing Strategy for Older People (2010-2015) identified a requirement for an additional 788 units from 2010 to 2026 to meet extra care and 'enhanced sheltered' needs. Extra care remains an important housing option in the new district Housing Strategy 2012-2017. The SHMA also highlights that an ageing population and higher levels of disability and health problems amongst older people will mean an increasing demand for specialist housing.  Delete paragraph		

<b>Mod No.</b>	<b>Page No.</b>	<b>Policy Paragraph</b>	<b>Modification</b>		
45	55	Policy BSC 4	<p>Update policy as follows;</p> <p>Housing sites of at least 400 dwellings will be expected to provide a minimum of 45 self-contained extra care dwellings as part of the overall mix. Should it be agreed with the Council that extra care housing would not be desirable in a particular location, an equivalent amount of alternative specialist housing (use class C3) for older people will be required.</p> <p>Elsewhere, opportunities for the provision of extra care, specialist housing for older and/or disabled people and those with mental health and other supported housing for those with specific living needs will be encouraged in suitable locations close to services and facilities. All proposals will be expected to provide affordable housing in accordance with Policy BSC 3: Affordable Housing.</p>		
46	57	Policy BSC 6	<p>Reword para 1 of policy as follows;</p> <p>Cherwell district will provide 19 (net) additional pitches to meet the needs of Gypsies and Travellers from 2012 to 2031. It will also provide 24 (net) additional plots for Travelling Showpeople from 2012 to 2031.</p> <p>Replace “Local Neighbourhoods” with “Local Plan Part 2” in para 2 and amend policy as follows;</p> <ol style="list-style-type: none"> <li>1. within 3km road distance of the built-up limits of Banbury, Bicester or a Category A village</li> <li>2. within 3km road distance of a Category B village and within reasonable walking distance of a regular bus service to Banbury or Bicester or to a Category A village.</li> </ol>

<b>Mod No.</b>	<b>Page No.</b>	<b>Policy Paragraph</b>	<b>Modification</b>		
		B.224a	whole of its new housing requirement for the 2011-2031 period within its administrative boundary, the Council will continue to work jointly with the other Oxfordshire local authorities to assess all reasonable spatial options of how any unmet need could be met. The consideration of all reasonable options would include undertaking a Habitats Regulations Assessment to assess the alone and in combination effects on sites of European importance.		
61	88	Policy ESD 14 B.256	<p>Update the first four sentences of the paragraph to reflect the findings of the SHLAA and emerging work on the Kidlington Framework Masterplan;</p> <p>Government policy indicates that Green Belt boundaries should only be altered in exceptional circumstances. The Local Plan's housing requirements and development strategy can be achieved without the need for a strategic review of the Green Belt in the district. In terms of local housing need, small scale affordable housing schemes to meet specifically identified local housing need may be met through the release of rural exception sites as part of the development control process, in accordance with Policy Villages 3. Kidlington's local housing needs are being examined in more detail through the preparation of a Kidlington Framework Masterplan which will provide evidence for Local Plan Part 2 and, potentially, a Neighbourhood Plan. A recent Employment Land Review (2012) identified a need for additional employment land in the Kidlington area. It is not anticipated that this land can be accommodated on sites outside of the Green Belt. A specific need has also been identified for the Science Park at Begbroke. Therefore, exceptional circumstances are considered to exist to justify a small scale local review of the Green Belt to meet employment needs (see Policy Kidlington 1: Accommodating High Value Employment Needs.</p>		
62	89	Policy ESD 14	<p>Delete the penultimate sentence of policy ESD 14 and reword as follows;</p> <p>A small scale local review of the Green Belt boundary in the vicinity of Langford Lane, Kidlington and Begbroke Science Park will be undertaken as part of the</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			Local Plan Part 2, in order to accommodate employment needs (See Policy Kidlington 1). Further small scale local review of the Green Belt boundary will only be undertaken where exceptional circumstances can be demonstrated.		
63	90	Policy ESD 15	Delete policy ESD 15 and all the supporting text.		
64	90	Policy ESD 15	Not necessary in light of MM 63		
65	90	Policy ESD 15	Not necessary in light of MM 63		
66	105	Bicester C.26	Update text as follows:-  Over 10,000 new homes will have been constructed up to 2031,		
67	106	Bicester 1 – North West Bicester Eco-Town C.33	Update text as follows;  <ul style="list-style-type: none"> <li>An eco-town development of 6,000 homes will be developed on land identified at North West Bicester in accordance with the standards set out in the former Eco-towns PPS.</li> </ul>		
68	107	Bicester 1 – North West Bicester Eco-Town C.35	Amend 5 <sup>th</sup> bullet as follows;  <ul style="list-style-type: none"> <li>Employment - At least 3,000 jobs within the plan period (approximately 1000 jobs on B use class land on the site) within the plan period. An economic strategy will be required and there should be local sourcing of labour, including providing apprenticeships during construction.</li> </ul>		

Mod No.	Page No.	Policy Paragraph	Modification		
69	108	Employment  C.41	Amend paragraph to reflect revised housing trajectory:-  For NW Bicester, this will mean providing access to work and 6,000 jobs by the end of the delivery of the NW Bicester eco-town development. The Local Plan estimates that over 3,000 homes will be provided by 2031 and therefore sets a target of approximately 3,000 job opportunities associated with the project to be provided within this period.		
70	108	Employment  C.42	Amend text as follows;  The precise nature and location of these jobs will be set by a masterplan has been prepared for the NW Bicester allocation. The draft masterplan shows that about 10 hectares of employment land is required at North West Bicester. This would provide for business space for offices, workshops, factories and warehousing (B1, B2 and B8 uses), but not for retail and leisure jobs which would be located in local centres. It is estimated that approximately <u>1,000</u> B use class jobs would be located at the North West Bicester site. The remainder would be provided through other uses including home working. Some jobs are likely to be located away from the site, for example in the town centre or on other employment sites.		
71	108-109	Bicester 1 North West Bicester Eco-Town	Amend policy as follows;  <b>Policy Bicester 1</b>  <b>NW Bicester Eco-Town</b>  <b>Development Area:</b> 390 hectares  <b>Development Description:</b> A new zero carbon (as defined in the Eco-towns Supplement to PPS1) mixed use development including 6,000 homes will be developed on land identified at North West Bicester.		

Mod No.	Page No.	Policy Paragraph	Modification		
			<p>Planning permission will only be granted for development at NW Bicester in accordance with a comprehensive masterplan for the whole area to be approved by the Council as part of a North West Bicester Supplementary Planning Document. The Council will expect the Masterplan and applications for planning permission to meet the following requirements:</p> <p><b>Employment</b></p> <ul style="list-style-type: none"> <li>• Land Area – a minimum of 10 ha, comprising business premises focused at Howes Lane and Middleton Stoney Road, employment space in the local centre hubs and as part of mixed used development.</li> <li>• Jobs created –At least 3,000 jobs (approx. 1000 jobs on B use class land on the site) within the plan period.</li> <li>• Use classes – B1, with limited B2 and B8 uses.</li> <li>• It is anticipated that the business park at the South East corner of the allocation will generate between 700 and 1000 jobs in use classes B1, B2 and B8 early in the Plan period.</li> <li>• A Carbon Management Plan shall be produced to support all applications for employment developments.</li> <li>• An economic strategy to be produced to support the planning applications for eco-town proposals demonstrating how access to work will be achieved and to deliver a minimum of one employment opportunity per new dwelling that is easily reached by walking, cycling and/or public transport.</li> <li>• Mixed use local centre hubs to include employment (B1(a), A1, A2, A3, A4, A5, C1, D1 and D2 )</li> </ul>

89	130	Bicester 13 – Gavray Drive  New para C.101a	<p>Insert new policy for new strategic site;</p> <p><b><u>Strategic Development: Bicester 13 – Gavray Drive</u></b></p> <p>The majority of the site is part of the River Ray Conservation Target Area. Part of the site is a local wildlife site and is situated to the east of Bicester town centre. It is bounded by railway lines to the north and west. The site comprises individual trees, tree and hedgerow groups, and scrubland/vegetation. The Langford Brook water course flows through the middle of the site.</p>		
90	130	New para C.101b	<p>The central and eastern section of the site contains lowland meadow, a BAP priority habitat. There are a number of protected species located towards the eastern part of the site. There are several ponds and a small stream, known as the Langford Brook, which runs from north to south through the middle of the site. A range of wildlife has been recorded including butterflies, great crested newts and other amphibians, reptiles, bats and birds.</p> <p>There are risks of flooding on some parts of the site therefore mitigation measures must be considered. There is also a risk of harming the large number of recorded protected species towards the eastern part of the site. Impacts need to be minimised by any proposal. Approximately a quarter of the site is within Flood Zones 2 and 3 therefore any development would need to be directed away from this area.</p> <p>Although there are a number of known constraints such as Flood Zone 3, River Ray Conservation Target Area and protected species, this could be addressed with appropriate mitigation measures by any proposal.</p>		
91	130	Bicester 13 - Gavray Drive	Insert new site policy;

			most versatile agricultural land and a soil management plan.		
92	132	Banbury  C.109	<p>Amend paragraph to reflect policy changes;</p> <p>Banbury has the largest supply of employment land in the district and the Council's Employment Land Review (2006, updated 2012) identified a range of available sites totalling over 46 hectares. In this Local Plan Bicester will be the focus for new employment land to respond to its significant planned housing growth and to reduce out-commuting. Banbury also has valued landscapes on the edge of the town where growth is not appropriate. Whilst many of the sites in Banbury are non-strategic, one site is considered to be of strategic importance to securing Banbury's long term supply of employment land and is identified in this Local Plan (Policy Banbury 6: Employment Land West of M40). Planning permission has recently been granted for new employment uses on this site. Another site at Junction 11 of the M40 will provide for mixed employment uses. Existing employment sites such as the vacant former Hella site could be occupied by smaller and medium size businesses, such as those that relocate from the Canalside site. Proposals for the town centre set out in this plan will also provide jobs particularly in the retail and leisure sectors.</p>		
93	135	Banbury  C.124	Delete paragraph.		
94	135	Banbury  C.125	<p>Amend 2<sup>nd</sup> bullet point as follows;</p> <ul style="list-style-type: none"> <li>Over 7,000 new homes will have been constructed by 2031 of which a substantial number will be 'affordable'. New services, facilities and cultural and recreation opportunities will have been provided. A new football ground will have been provided.</li> </ul>

Mod No.	Page No.	Policy Paragraph	Modification		
			also multiple existing services located in other places. The anticipated costs associated with relocating or realigning the other existing apparatus throughout the site are unlikely to be significant or 'abnormal' for a development of this type in a town centre location.		
96	139	Banbury 1 - Canalside	<p>Update 5<sup>th</sup> bullet point as follows;</p> <p>The proposals for Canalside mean that nearly all existing land uses, buildings and businesses could be removed in the long term. One of the Council's key priorities is to ensure that businesses remain in Banbury or the District. The actual amount of land needed to accommodate operational businesses at Canalside is not significant and there are several options available to businesses. In terms of locations where businesses may wish to relocate to this could include within vacant units/premises elsewhere or in new buildings elsewhere. This could include on existing employment sites (through intensification) such as on the former SAPA and Hella sites, or in/on new buildings/sites allocated in the Council's Local Plan or Local Plan Part 2 such as on land near the motorway., The re-development of Canalside will provide businesses with the opportunity to expand and invest for the future and the Council's Economic Development team will assist any businesses to relocate. The redevelopment of Canalside is a long term plan and therefore it is possible some businesses may want to remain on a temporary basis for some time. All of the existing businesses could be relocated but the Council will encourage existing businesses which are offices, retail units and community uses which are conducive to the aims of this Policy and the SPD to remain and occupy new buildings on the site, potentially helping them to expand and prosper in this town centre location. A number of the older buildings and the site of former industrial premises,</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			offer considerable opportunities for <u>re-use</u> or re-development for industrial enterprises. Some of the industrial uses (B use classes) could remain and 700 dwellings can be delivered on the site with some of these remaining on the site. The particular uses and businesses that remain will be explored further in the SPD for the site which will include further consultation with landowners and businesses.		
97	140	Banbury 2 - Hardwick Farm, Southam Road	Amend development area as follows;  <b>Hardwick Farm, Southam Road (East and West)</b>  <b>Development Area:</b> 32 hectares		
98	140	Banbury 2: Hardwick Farm, Southam Road	Amend 'Housing' & 'Infrastructure' bullet points as follows;  <b>Housing</b> <ul style="list-style-type: none"> <li>• Number of homes: approximately 600 including no more than 90 homes to the western side of Southam Road</li> <li>• Dwelling mix: A variety of dwelling types (see Policy BSC 4: Housing Mix)</li> <li>• Affordable/social: 30%</li> <li>• The provision of extra care housing and the opportunity for community self-build affordable housing</li> </ul> <b>Infrastructure Needs</b> <ul style="list-style-type: none"> <li>• Education – primary school required on site, location to be negotiated, with contributions towards secondary school provision</li> </ul>

Mod No.	Page No.	Policy Paragraph	Modification		
		C.152	<p>has been further supported by other work for the Canalside, Bolton Road and Spiceball Development Areas. On the basis of this work, the following sites are identified as being of strategic importance in meeting the Plan's objectives:</p> <ul style="list-style-type: none"> <li>○ Canalside (Policy Banbury 1) - This area is identified as a strategic housing allocation to deliver a housing-led mixed-use regeneration of this area. This area will form an important link between the railway station and new housing to the south and the heart of the town centre.</li> <li>○ Bolton Road Development Area (Policy Banbury 8) - This is <u>a</u> major opportunity for the regeneration of this area through mixed use development.</li> <li>○ Banbury Spiceball Development Area (Policy Banbury 9) - Including land at the former Spiceball Sports and Leisure Centre This site provides a unique opportunity to regenerate this area and introduce new retail and provision for the night economy as well as improved arts and cultural uses within an expanded town centre.</li> </ul> <p>Land at Calthorpe Street also provides the opportunity to regenerate this historic part of the town centre which has experienced vacancies. It provides the opportunity to deliver a mixed use scheme including car parking. Opportunities for the site will be explored further in the Banbury Masterplan.</p>		
108	153	<p>Banbury 7 – Strengthening Banbury Town Centre</p> <p>C.155</p>	<p>Amend text as follows;</p> <p>In 2010 the Council commissioned an update to its 2006 PPS6 Retail Study and this identifies the capacity for comparison and convenience floorspace in each of the district's urban centres up to 2026. In the light of recent changes facing the retail sector this study has itself been followed by a further examination of retail needs through to 2031 and the opportunity that exists to strengthen</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			Banbury's retail offer. In 2012 a study was commissioned and produced by CBRE which identifies the capacity for comparison and convenience retail floorspace in the District to 2031. A strategy for sites to accommodate retail floorspace is identified for Banbury. With proposals at Spiceball expected to deliver a new supermarket and some A3 uses and Bolton Road proposed to deliver new dwellings on a significant proportion of the site, land at Calthorpe Street is likely to contribute to ensuring that the retail needs of an expanding town are met. Following the CBRE study our plan aims to help strengthen the retail base of the town centre, supporting the growth of retailers, particularly independent retailers and the night economy, to encourage dwell time and help generate new employment. The Local Plan identifies land within Banbury town centre that will help meet Banbury's identified need as well as positioning Banbury to compete on a regional basis.		
109	153	Banbury 7 – Strengthening Banbury Town Centre	<p>Amend policy text to read;</p> <p>Shopping, leisure and other main town centre uses will be supported within the boundary of Banbury town centre. Residential development will be supported in appropriate locations in the town centre except where it will lead to a loss of retail or other 'Main Town Centre Uses'.</p> <p>The change of use of sites for main town centre uses in the town centre for residential development will normally be permitted if proposals contribute significantly to the regeneration of the town centre. Mixed use schemes will be encouraged.</p> <p>A1 uses will not be permitted within the existing Town Centre Commercial Area.</p> <p>Only A1 and A3 uses will be permitted at ground floor in the primary shopping frontage. Residential development will not be permitted within the primary</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			shopping frontage unless above ground floor level.  The Council will identify an extension to the Town Centre within the defined 'Town Centre Extension - Area of Search'. Prior to this retail and other main town centre uses will only be supported within the Area of Search should if they form part of a package of proposals new schemes which to help deliver the aims for Banbury Canalside and be in accordance with. In all cases proposals for town centre uses will be considered against Policies SLE2, ESD10 and ESD16.		
110	154	Banbury 8 - Land at Bolton Road	Re-title "Land at Bolton Road Policy" to read "Bolton Road Development Area"  Bolton Road Development Area		
111	154	Banbury 8 - Land at Bolton Road  C.158	Add a new sentence to the end of the paragraph as follows;  The Council is preparing a masterplan for the Bolton Road site in the form of a Supplementary Planning Document (SPD). It will set out the capacity and mix of uses that should be supported on the site to ensure a comprehensive and viable scheme that sits well with the Conservation Area that it sits alongside. The aim is to secure a mix of convenience and comparison shopping on the site, together with other uses including high quality residential and leisure uses at the heart of Banbury. The site will connect and integrate with the Castle Quay shopping centre, and link through to Parsons Street, strengthening the role of the independent sector to increase footfall. We intend to secure a high quality mixed use development on the site which would also provide the option for food retailing. The site provides the opportunity to provide high quality residential development in a town centre location.		
112	154-155	Banbury 8 - Land at Bolton	Amend site policy as follows;		

Mod No.	Page No.	Policy Paragraph	Modification		
		Road	<p><b>Policy Banbury 8: Bolton Road Development Area</b></p> <p><b>Development Area:</b> 2 hectares</p> <p><b>Housing</b></p> <ul style="list-style-type: none"> <li>• 200 dwellings – Residential use would be acceptable in conjunction with the wider retail and leisure proposal</li> </ul> <p><b>Infrastructure Needs</b></p> <ul style="list-style-type: none"> <li>• Education – Contributions towards primary and secondary school provision</li> <li>• Access and Movement–Improved links between the site and Parson Street</li> <li>• Community facilities – Replacement of the Bingo hall is required. 			<p>Flood Risk Management including the use of SuDS (Policy ESD 7: Sustainable Drainage Systems (SuDS)), specifically attenuation SuDS techniques, taking account of the recommendations of the Council's Strategic Flood Risk Assessment</p> <ul style="list-style-type: none"> <li>• Adoption of a surface water management framework to reduce run off to greenfield rates</li> <li>• Demonstration of climate change mitigation and adaptation measures including demonstration of compliance with the requirements of policies ESD 1 – 5</li> <li>• An assessment of whether the site contains best and most versatile agricultural land, including a detailed survey where necessary.</li> </ul>		
116	164	<p>New policy</p> <p>Banbury 16 and 17</p>	<p>Insert new text introduction to site policy for South of Salt Way as follows;</p> <p><b>Strategic Development in South West Banbury</b></p> <p>The Development Area known as Banbury South West comprises a number of adjoining development sites which will, collectively, deliver up to 1,495 dwellings in local communities with strong links to the town centre. The developments will bring forward affordable housing, a new primary school and local centre as well as formal and informal open space and other infrastructure benefits.</p> <p>The Banbury South West Development Area is bounded by the existing urban edge of Banbury and Salt Way to the north, by White Post Road to the east, and extends to Crouch Farm to the west. The A361 bisects the development sites in a north south direction.</p> <p>The broad layout and design of the developments within the Banbury South West Development Area will reflect the existing character and form of the landscape and will contribute to the creation and enhancement of local green infrastructure networks. Proposals should demonstrate:</p> <ul style="list-style-type: none"> <li>• strong design and place shaping principles;</li> </ul>		

Mod No.	Page No.	Policy Paragraph	Modification		
			<ul style="list-style-type: none"> <li>• how development does not compromise but complements adjoining development – existing and proposed; and</li> <li>• facilitates or contributes to the delivery of necessary infrastructure.</li> </ul> <p>Each individual development site will provide the necessary infrastructure to support itself to avoid placing any constraint or unreasonable burden upon either preceding or subsequent development sites that collectively comprise the Banbury South West area. Each development site will therefore contribute as necessary to the delivery of infrastructure within the area through onsite provision or an appropriate off-site financial contribution towards provision elsewhere in the Banbury South West areas to be secured through s106 agreement or CIL. This approach will ensure that individual sites are capable of coming forward independently, yet in a complementary manner.</p> <p>Each individual development site is supported by its own site-specific policy that sets out the necessary infrastructure required for that specific development to provide the necessary confidence regarding the relationship between each of the sites that collectively comprise the Banbury South West area and to ensure timely and appropriate provision of infrastructure alongside the delivery of development.</p>		
117	164	New policy  Banbury 16 - South of Salt Way - West	<p>Insert introduction to new site Policy Banbury 16 – South of Salt Way – West as follows;</p> <p><b>Policy Banbury 16 – South of Salt Way - West</b></p> <p>This site is located to the south of Salt Way, to the west of the A361 Bloxham Road. Public rights of way cross the site from north to south and run along part of the eastern site boundary, whilst the public right of way of the Salt Way, an important historical, ecological and recreational route, runs along the site's northern boundary.</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			<p>Part of Salt Way is a proposed new Local Wildlife Site and is a non-designated heritage asset. There is BAP habitat (broadleaved woodland) along the northern site boundary and some stretches of the eastern boundaries, and dense hedgerows around the site boundary. There are records of protected species in the locality. Crouch Farm, to the west of the site, is Grade II listed and there are further listed buildings in the wider vicinity (Wykham Park Farm). The site is located in an area of archaeological potential where a number of Iron Age and Roman sites have been recorded.</p> <p>Crouch Hill (together with its setting), to the north west of the site, is an important historical and topographical landscape landmark in Banbury and is considered to be a non-designated heritage asset. Site Banbury 16 provides the opportunity to develop the south west of Banbury in a coordinated and integrated way, delivering the necessary facilities and infrastructure in a timely manner. The westernmost extent of the site identified as Banbury 16 reflects the existing development to the north at Waller Drive, and follows existing field boundaries. Beyond this, development would have significant landscape and visual impacts including upon the setting of Crouch Hill.</p>		
118	164	<p>New policy</p> <p>Banbury 16 - South of Salt Way - West</p>	<p>Insert new site policy as follows;</p> <p><b>Policy Banbury 16 – South of Salt Way - West</b></p> <p><b>Development Area:</b> 8 hectares</p> <p><b>Development</b> Description - Development of land at South of Salt Way – west will deliver up to 150 dwellings with associated facilities and infrastructure.</p> <p><b>Housing</b></p>		

Mod No.	Page No.	Policy Paragraph	Modification

119	164	New policy  Banbury 17 – South of Salt Way – East	<p>Insert introduction to new site – Policy Banbury 17 – South of Salt Way – East as follows;</p> <p><b>Policy Banbury 17 – South of Salt Way – <u>East</u></b></p> <p>This site is located to the south of Salt Way, to the east of the A361 Bloxham Road. It includes the land adjoining the A361 for which planning permission has already been granted for 145 dwellings. There is a dense hedgerow along the site's northern boundary, the Salt Way, which is a proposed new Local Wildlife Site. Salt Way is a public right of way of important historical and recreational significance running along the northern boundary of the site; a number of other public rights of way cross the site from north to south.</p> <p>The Salt Way is a non-designated heritage asset. There are dense hedgerow boundaries within the site, of good condition, and areas of BAP habitat and individual woodland parcels around the boundaries of the site. Wykham Farmhouse, to the south of the site, is Grade II listed.</p> <p>The development of site Banbury <u>17</u> combines two adjoining sites that have the potential to be developed as part of a single development area. Banbury 17 provides the opportunity to develop the south west of Banbury in a coordinated, integrated and planned way, delivering the necessary facilities and infrastructure in a timely manner.</p> <p>Structure planting and landscaping will be required along the site's southern boundary in order to mitigate the visual impacts of the site upon the Sor Brook Valley.</p> <p>A new footpath bridleway will be required to be provided running from east to</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			<p>west along the southern boundary of the development area, incorporating links with existing footpaths to form a new circular route around the development linking back to Salt Way.</p> <p>Formal outdoor sports provision is to be located to the south east of Banbury 17, ensuring that land extending towards Wykham Lane, where the potential for adverse landscape and visual impact is higher, will be kept free from built development, whilst the eastern most part of the site is to be utilised as informal open space in order to maintain an important gap between the settlements of Banbury and Bodicote, with each maintaining its separate identity and the character of Bodicote Conservation Area protected.</p>		
120	164	<p>New policy</p> <p>Banbury 17 - South of Salt Way - East</p>	<p>Insert new site policy as follows;</p> <p><b>Policy Banbury 17 – South of Salt Way – East</b></p> <p><b>Development Area:</b> 68 hectares (in total)</p> <p>Development Description - Development of land south of Salt Way - East will deliver a new neighbourhood of up to 1,345 dwellings with associated facilities and infrastructure as part of SW Banbury. The site is in more than one ownership (Land east of the Bloxham Road and land west of Bodicote) but the development area forms a coherent whole. An integrated, coordinated and comprehensive planning approach will be taken with a link road between the sites in separate ownerships. The site will require a masterplan to ensure this is delivered.</p> <p><b>Housing</b></p> <ul style="list-style-type: none"> <li>Number of homes - Up to 1,345 dwellings (including 145 with permission)</li> </ul>

121	164	<p>New policy</p> <p>Banbury 18 - Land at Drayton Lodge Farm</p>	<p>Insert introduction to new site – Policy Banbury 18 – Land at Drayton Lodge Farm as follows;</p> <p><b>Policy Banbury 18: Land at Drayton Lodge Farm</b></p> <p>The site is located to the west of the Warwick road (B4100) and to the north east of the village of Drayton. The village of Hanwell is located to the north east of the site. The Warwick road is on the north eastern boundary of the site and beyond this there is residential development at Hanwell fields. Currently there is agricultural land to the north, south, east and west of the site.</p> <p>At the centre of the site is a golf club with a course, driving range and a small car park, a farm, dwellings and a small caravan park with maintained pitches, paths hedgerows and a copse. The remainder of the site is in agricultural use. There is a small lake to the south west of the site and the North Oxfordshire Academy is located to the south east of the site. There are public rights of way throughout the site. Part of the site is an archaeological constraint priority area.</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			<p>It is considered that part of the site is suitable for residential development. The field to the north of the farm and the golf driving range could be developed subject to recreation uses being replaced elsewhere. The site could be linked to the existing site with planning permission to the south and to existing and proposed development to the north east of the site.</p> <p>Landscape evidence has recognised that consideration should be given to the protection of the Drayton Conservation Area which the site abuts to the south, and that care should also be taken to avoid visual prominence of development from within the Sor Brook Valley. The addendum states that the landscape is relatively open with views west towards the Sor Brook Valley creating a feeling of exposure in some locations; primarily within the arable landscape. The addendum notes an important hedgerow on the site's northern boundary.</p> <p>The central part of the site containing the existing dwellings and copse should be protected from development to account for these uses and the steep and undulating landscape on this part of the site. Impacts on landscape, conservation area and the residential properties in the centre of the site should be minimised by any proposal.</p>		
122	164	<p>New policy</p> <p>Banbury 18 - Land at Drayton Lodge Farm</p>	<p>Insert new site policy as follows;</p> <p><b>Policy Banbury 18: Land at Drayton Lodge Farm</b></p> <p><b>Development Area:</b> 15 hectares</p> <p><b>Development Description:</b> Located at the northern edge of Banbury, this residential strategic development site will provide approximately 250 dwellings with associated facilities and infrastructure in a scheme that demonstrates a</p>

123	164	New policy  Banbury 19 – Land at Higham Way	<p>Insert introduction – Policy Banbury 19 – Land at Higham Way as follows;</p> <p><b>Policy Banbury 19: Land at Higham Way</b></p> <p>This site is a former waste management facility and concrete batching plant and is located to south east of Banbury town centre. The site is bounded by residential and sports pitches to the north, railway lines to the south and former railway land within site Banbury 6 to the east.</p> <p>The site is within Flood Zone 2 and 3. A Flood Alleviation Scheme (FAS) for the north of Banbury was completed in 2012 and a large part of the site falls within the defended area. The proximity to the railway would present noise pollution to future residents and require a buffer/design solution which might reduce yield.</p> <p>In principle the site offers a suitable location for development, and would contribute to the creation of sustainable and mixed communities. The site is close to the town centre and railway stations and in need of bringing back into effective use. However, there are current physical constraints that need to be overcome before development can be progressed. These include addressing the potential for land contamination from the previous use, and noise mitigation measures to reduce noise impact from the railway for future residents. A replacement waste management site for Grundons has been approved nearby. The Cemex site had been cleared and is surplus to requirements. The access road (Higham Way) is in the process of being adopted. The site was marketed for a mixed use development in 2013.</p>

<b>Mod No.</b>	<b>Page No.</b>	<b>Policy Paragraph</b>	<b>Modification</b>		
125	165	Kidlington  New para C.188b	Insert a new paragraph following C.188a;  Due to a lack of spare education capacity in the town, expansion of one of the existing primary schools will be required over the plan period and developer contributions will be sought.		
126	165	Kidlington  C.190	Amend the text to reflect modifications to Policy ESD 14;  As an urban area close to Oxford and a number of other villages, Kidlington is surrounded by Green Belt. The Local Plan's housing requirements for the plan period and the development strategy can be achieved without the need for a strategic review of the Green Belt in the district. The Oxfordshire District, City and County Councils are jointly considering how to accommodate any unmet housing needs arising in the wider Housing Market Area as set out in para B .89b. With regard to Kidlington's own needs, policies Villages 1 and 2 provide some opportunity. Small scale affordable housing schemes to meet specifically identified local housing need may also be brought forward through the release of rural exception sites (Policy Villages 3). The Kidlington Framework Masterplan will also identify further opportunities. A Local Housing Needs Study will be commissioned in consultation with Kidlington Parish Council.		
127	167	Kidlington 1: High Value Employment Needs	Modify first part of policy as shown below:-  We will undertake a small scale local review of the Green Belt to accommodate identified high value employment needs at two distinct and separate locations:  (A) Langford Lane / Oxford Technology Park / London-Oxford Airport  (B) Begbroke Science Park  Key design and place shaping principles:		

Mod No.	Page No.	Policy Paragraph	Modification		
			Design for buildings that create a gateway with associated ancillary uses creating a strong sense of arrival, including when arriving from the airport...		
128	168	Kidlington  C.199	Change sentence to read;  The 2012 Retail Study showed that significant new development should not be directed to –Kidlington but that the town centre needed some further environmental improvements and the evening economy should be encouraged. It is proposed to expand the geographical area defined as Kidlington Village Centre to include land on the western side of the Oxford Road and other small areas of commercial uses. The exact boundary will be determined in Part 2 of the Local Plan. The aim of the extension is to:...		
129	168	Kidlington 2 - Strengthening Kidlington Village Centre	Amend policy text to read:-  Shopping, leisure and other 'Main Town Centre Uses' will be supported within the boundary of Kidlington Village Centre. Proposals should be considered against Policies SLE 2, ESD 10 and ESD 16.  Residential development will be supported in appropriate locations in the town centre except where it will lead to a loss of retail or other ' <u>Main Town Centre Uses</u> '.  The change of use of sites for main town centre uses in the town centre for residential development will normally be permitted if proposals contribute significantly to the regeneration of the town centre. Mixed use schemes will be encouraged.

134	171	C.214	<p>Add two additional bullets to the list;</p> <p>Our approach to providing development in the rural areas seeks to:</p> <ul style="list-style-type: none"> <li>• deliver a new settlement at former RAF Upper Heyford to enable conservation and environmental improvements and to contribute in meeting Cherwell wide and local housing needs</li> <li>• provide new housing for people in rural areas to meet, in particular, the needs of newly forming households</li> <li>• provide affordable housing in what are generally areas of higher housing cost</li> <li>• deliver housing at villages where local shops, services and job opportunities are available and accessible or where access to nearby towns would be sustainable in transport terms</li> <li>• consider the relationship between ‘clusters’ of villages</li> <li>• provide development to help sustain rural services and facilities, including bus routes</li> <li>• avoid significant environmental harm.</li> </ul>		

Mod No.	Page No.	Policy Paragraph	Modification		
			support the neighbourhood planning process		
135	171 & 172	C.215	<p>Update text as follows;</p> <p>To this end, Policy Villages 1 provides a categorisation of the district's villages to ensure that unplanned, small-scale development within villages is directed towards those villages that are best able to accommodate limited growth. The Policy establishes which villages are, in principle, appropriate for conversions and infilling (Category C) and which are suitable for accommodating minor development (Categories A and B). . Policy Villages 2 provides for additional planned development to be accommodated at the most sustainable villages (Category A) to meet district housing requirements and to help meet local needs. Policy Villages 3 seeks to respond to often acute issues of affordability in rural areas and allows for affordable housing to be provided in any of Cherwell's villages to meet locally identified needs in locations or on sites that might otherwise not be appropriate. Policy Villages 4 establishes a framework for addressing open space, sport and recreation deficiencies at the villages. Policy Villages 5 seeks to deliver the new settlement at former RAF Upper Heyford.</p>		
136	172	<p>Villages 1 - Village Categorisation</p> <p>C.219a</p>	<p>Update text as follows;</p> <p>Policy Villages 1 provides a categorisation of villages to guide the consideration of small-scale proposals for residential development within the built-up limits of settlements. Village categorisation helps understand which villages are in principle best placed to sustain different levels of residential development. The Policy ensures that unanticipated development within the built-up limits of a village is of an appropriate scale for that village, is supported by services and facilities and does not unnecessarily exacerbate travel patterns that are overly reliant on the private car and which incrementally have environmental consequences. Policy Villages 1 seeks to manage small scale development proposals (typically but not exclusively for less than 10 dwellings) which come</p>		

Mod No.	Page No.	Policy Paragraph	Modification					
			forward within the built-up limits of villages. It also informs Policy Villages 2 which provides a rural allocation for sites of 10 or more dwellings at the most sustainable category A villages and which will guide preparation of both the Local Plan Part 2 and Neighbourhood Plans.					
137	173	Villages 1 - Village Categorisation  C.221	Update text as follows;  Survey work was previously undertaken to inform village categorisation and this was supplemented by 'the Cherwell Rural Areas Integrated Transport & Land Use Study' (CRAITLUS) which was produced in association with Oxfordshire County Council. The survey work was updated in 2014.					
138	173	Villages 1 - Village Categorisation  C.224	Update text as follows;  It is not proposed that clustering forms part of the development strategy In 'Policy Villages 2: Distributing Growth Across the Rural Areas' as the services and facilities in most satellite villages are too limited to sustainably accommodate the development of larger allocated sites. However, there is considered to be a role for satellite (Category B) villages to accommodate minor development which is set out in 'Policy Villages 1: Village Categorisation' below.					
139	173	Villages 1 - Village Categorisation	Delete policy and replace with the following;  Policy Villages 1: Village Categorisation  Proposals for residential development within the built-up limits of villages (including Kidlington) will be considered having regard to the categorisation below. Only Category A (Service Centres) and Category B (Satellite Villages) will be considered to be suitable for minor development in addition to infilling and conversions. <table><tr><td>Catego</td><td>Villages by Category</td><td>Type of</td></tr></table>	Catego	Villages by Category	Type of

			(*) Denotes villages partly within and partly outside the Green Belt. In those parts that lie within the Green Belt, only infilling and conversions will be permitted.				
140	174	Villages 1 - Village Categorisation  C.226	Update text as follows;  There is a need for Cherwell's villages to sustainably contribute towards meeting the housing requirements identified in Policy BSC1. Policy Villages 1 allows for the most sustainable villages to accommodate 'minor development' and all				

Mod No.	Page No.	Policy Paragraph	Modification		
			villages to accommodate infilling or conversions. The appropriate form of development will vary depending on the character of the village and development in the immediate locality. In all cases, 'Policy ESD 16: The Character of the Built and Historic Environment' will be applied in considering applications.		
141	174	Villages 1 - Village Categorisation  C.227	<p>Update text as follows;</p> <p>In assessing whether proposals constitute acceptable 'minor development', regard will be given to the following criteria:</p> <ul style="list-style-type: none"> <li>• the size of the village and the level of service provision-</li> <li>• the site's context within the existing built environment</li> <li>• whether it is in keeping with the character and form of the village</li> <li>• its local landscape setting</li> <li>• careful consideration of the appropriate scale of development, particularly in Category B (satellite) villages.</li> </ul> <p>In considering the scope of new residential development within the built-up limits of Kidlington, consideration will be given to its role as a larger service centre and its urban character, the functions that existing gaps and spaces perform and the quality of the built environment.</p>		
142	174	Villages 1 - Village Categorisation  C.228	<p>Update text as follows;</p> <p>Infilling refers to the development of a small gap in an otherwise continuous built-up frontage. Not all infill gaps will be suitable for development. Many spaces in villages' streets are important and cannot be filled without detriment to their character. Such gaps may afford views out to the landscape or help to impart a spacious rural atmosphere to the village. This is particularly important in a loose knit village pattern where the spaces may be as important as the buildings.</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
143	174	Villages 1 - Village Categorisation C.229	Update text as follows;  Adderbury, Ambrosden, Arncott, Begbroke, Bletchington, Bloxham, Bodicote, Chesterton, Cropredy, Deddington, Finmere, Fringford, Fritwell, Hook Norton, Kidlington, Kirtlington, Launton, Milcombe, Sibford Ferris/Sibford Gower, Steeple Aston, Weston on the Green, Wroxton and Yarnton are Category A villages. The Category A villages which perform as “service centres” for the “satellite villages” (forming a “village cluster”) shown in the table at paragraph C.225 are Adderbury, Ambrosden, Bloxham, Cropredy, Deddington and Steeple Aston.		
144	174	Villages 1: Village Categorisation C.230	Replace paragraph as follows;  The category B villages are satellite villages associated with a larger service centre. The satellite villages are: Blackthorn, Claydon, Clifton, Great Bourton, Hempton, Lower Heyford, Middle Aston, Milton, Mollington, South Newington, and Wardington. They do not ‘score’ highly enough in their own right to be included as category A villages but are considered to be appropriate for minor development because of the benefits of access to a service centre within a village cluster. For example, Claydon, Great Bourton, Mollington and Wardington benefit from their relationship with Cropredy. As smaller settlements, the satellite villages have been given a separate ‘B’ Category as they would not be suitable for larger scale development provided for by Policy Villages 2.		
145	174	Villages 1 - Village Categorisation	Add new paragraph C.230a;  All other villages are classified as category C villages.		
146	175	Villages 2 - Distributing	Modify housing figures:-

			processing’.		
152	179	Villages 5 - Former RAF Upper Heyford  C.256	<p>Update text as follows;</p> <p>A number of matters raised in the 2008 public inquiry is set out in the appeal decision from the Secretary of State in January 2010 remain relevant to the consideration of the scale, location and type of development that can take place at Upper Heyford including:</p> <ul style="list-style-type: none"> <li>• the delivery of the required balance of historical/cultural objectives, environmental improvements, ecological benefits and public access;</li> <li>• whether the scale, type and location of employment and storage proposed for the Flying Field would harm the character of the Conservation Area and setting of Listed Buildings;</li> <li>• the extent of demolition/reuse of historic buildings on the site</li> <li>• whether adequate opportunities for travel other than by private car would be delivered;</li> <li>• whether adequate infrastructure could be delivered; and</li> <li>• whether a comprehensive and lasting approach to the whole site could be delivered.</li> </ul>		
153	180	Villages 5 - Former RAF Upper Heyford	Delete paragraph C257		
154	180	Villages 5 - Former RAF Upper Heyford  New para’ C.258	<p>Amend paragraph c.258 as follows;</p> <p>The site is allocated in this Local Plan as a means of securing the delivery of a lasting arrangement on this exceptional large scale brownfield site, whilst additional greenfield land is now allocated in the context of meeting the full objectively assessed housing needs of the district by realising the opportunities</p>		

Mod No.	Page No.	Policy Paragraph	Modification		
			presented by the development of this new settlement. The former airbase site currently has planning permission for a new settlement of some 1075 homes (gross), and Policy Villages 5 provides for additional development through a combination of the intensification of the density of development proposed on the less sensitive previously developed parts of the site, and new, limited, greenfield development around the main airbase site in locations that will be complementary to the approved development. The additional development areas are shown on inset map Policy Villages 5. The policy allows for residential development focused to the south of the flying field, avoiding the most historically significant and sensitive parts of the site, and on limited greenfield land to the south of Camp Road (and one greenfield area to the north of Camp Road, east of Larsen Road). Given the rural and isolated location of the settlement, and its significant heritage interest, securing adequate transport arrangements and funding the necessary mitigation of transport and heritage impacts will be of particular importance, whilst Policy Villages 5 also makes provisions relating to the importance of high quality design to reflect the distinctive character areas of the site.		
155	180	Villages 5 - Former RAF Upper Heyford  New para' C.259	Add new paragraph following C.258:-  A comprehensive approach will be required and it will be necessary to demonstrate how the additional land identified can be satisfactorily integrated with the approved development. The additional land will not be permitted to be developed independently of the main development and infrastructure contributions will be expected for the wider scheme.		
156	180	Villages 5 - Former RAF Upper Heyford  New para' C.260	Add new paragraph following C.259:-  Consultation with English Heritage will be required in formulating specific development proposals for the site, whilst regard should also be had to the following documents in preparing any such scheme:

<b>Section E: Monitoring and Delivery of the Local Plan</b>					
164	190	E.11	<p>Update paragraph to refer to new NPPG. Add text to provide further detail on the monitoring of housing land supply;</p> <p>Housing delivery will be monitored to ensure that the projected housing delivery is achieved. The district is required by the NPPF and the NPPG to maintain a continuous five year supply of deliverable (available, suitable and achievable) sites as well as meeting its overall housing requirement. The District must also provide an additional buffer of 5% on top of its five year land supply delivery requirement. This increases to 20% where there has been a record of persistent under delivery. The Council's housing land supply position will be formally reported and comprehensively reviewed on an at least annual basis in the monitoring report. Updates to the housing land supply position will be undertaken during the year should there be a significant change in circumstances to the District's housing land supply position.</p>		
165	190	E.12	Add text to provide further detail on the delivery of the dwellings allocated in the Local Plan and shown in the Housing Trajectory:-		

Mod No.	Page No.	Policy Paragraph	Modification		
			<p>This Local Plan allocates strategic sites for development. The non strategic sites required to accommodate the remainder of the development identified in the Housing Trajectory will either be allocated in the Local Plan Part 2 or in Neighbourhood Plans, or will be identified through the determination of applications for planning permission. The Council will regularly review its Strategic Housing Land Availability Assessment to ensure there is sufficient potential supply.</p>		
166	192	E.22	<p>Add text to provide further detail on the delivery of the dwellings allocated in the Local Plan and shown in the Housing Trajectory;</p> <p>If the supply of deliverable housing land drops to five years or below and where the Council is unable to rectify this within the next monitoring year there may be a need for the early release of sites identified within this strategy or the release of additional land. This will be informed by annual reviews of the Strategic Housing Land Availability Assessment.</p>		
167		E.25	<p>Amend para to read as follows:</p> <p>Annual monitoring will inform future Local Plan reviews. These reviews may be in response to shortfalls in the implementation of the Plan's policies and in the delivery of infrastructure, to changes in national policy or strategic needs or due to the need to roll forward the plan period. A small scale review of policy could in some instances be undertaken through preparation of other development plan documents or their review. The possibility of an early Plan review to help meet unmet needs arising elsewhere in the Housing Market Area is provided for at para B.89b.</p>		
168	193/195	Tables 15/16	Modified and updated Tables 15 and 16: Housing Trajectory and Employment Trajectory, incorporating consequential changes from main modifications.
